## Breastfeeding: Pumping record

This pumping record helps you track how much milk ("milk volume") in ounces (oz) or milliliters (mL) you're producing each day. Aim for 8 breastfeeding sessions every 24 hours. Record your milk volume for each session below.

## Milk volume targets

- By day 3 or 4 after your baby is born: Your milk should come in. You should notice a significant increase in volume. The milk will look thinner and whiter than before.
- By the end of day 7: Your 24-hour total volume should be at least 16 ounces ( 500 mL ) for a single baby or 20 ounces $(600 \mathrm{~mL})$ for twins.
- By the end of day 14: Your 24-hour total volume should be at least 24 to 32 ounces ( 700 to 950 mL ) for a single baby or 36 ounces ( $1,100 \mathrm{~mL}$ ) for twins.

Talk to your lactation consultant if you're not meeting these targets or if you have concerns about breastfeeding and pumping.

| Day |  | Minutes (min) of pumping | Notes <br> (as needed about the session) | Milk volume obtained (oz/mL) |  |
