

Recommendations for protecting your skin from the American Academy of Dermatology.

Protect yourself from the sun

Sun exposure is the most preventable risk factor for all skin cancers, including melanoma. You can have fun in the sun and decrease your risk of skin cancer. Here's how to **Be Sun Smart**[®]:

- **Generously apply a broad-spectrum, water-resistant sunscreen** with a Sun Protection Factor (SPF) of 30 or more to all exposed skin. “Broad-spectrum” provides protection from both ultraviolet A (UVA) and ultraviolet B (UVB) rays. Reapply approximately every two hours, even on cloudy days, and after swimming or sweating.
- **Wear protective clothing**, such as a long-sleeved shirt, pants, a wide-brimmed hat, and sunglasses, where possible.
- **Seek shade** when appropriate. Remember that the sun's rays are strongest between 10 a.m. and 4 p.m. If your shadow appears to be shorter than you are, seek shade.
- **Protect children** from sun exposure. Be sure to play in the shade, use protective clothing, and apply sunscreen.
- **Use extra caution near water, snow, and sand** because they reflect and intensify the damaging rays of the sun, which can increase your chances of sunburn.
- **Get vitamin D safely** through a healthy diet that may include vitamin supplements. Don't *seek* the sun.
- **Avoid tanning beds.** Ultraviolet light from the sun and tanning beds can cause skin cancer and wrinkling. If you want to look like you've been in the sun, consider using a sunless self-tanning product, but continue to use sunscreen with it.
- **Check your birthday suit on your birthday.** If you notice anything changing, growing, or bleeding on your skin, see a dermatologist. Skin cancer is very treatable when caught early.
