Together, We Can Make the World a Healthier, Safer Place for All

Health is foundational to overall well-being. It begins at home and is grounded in strong communities. This is evident in things like quality education, affordable housing, clean drinking water, and other social drivers or factors that ultimately determine health. We remain committed to clinical excellence inside our health system. Still, we realize that impacting health must come from working with and supporting our communities. This assessment highlights the needs of our community and showcases initiatives possible through strong collaborations with community organizations, community leaders, and numerous caregivers (employees) throughout our Intermountain Healthcare system.

Much of this report reflects the fantastic assessment work done with our Utah, Idaho, and Nevada communities – and there is much more to come! Even at the time of publication, our efforts have grown across additional states. By the end of 2022, we'll be serving communities in six states.

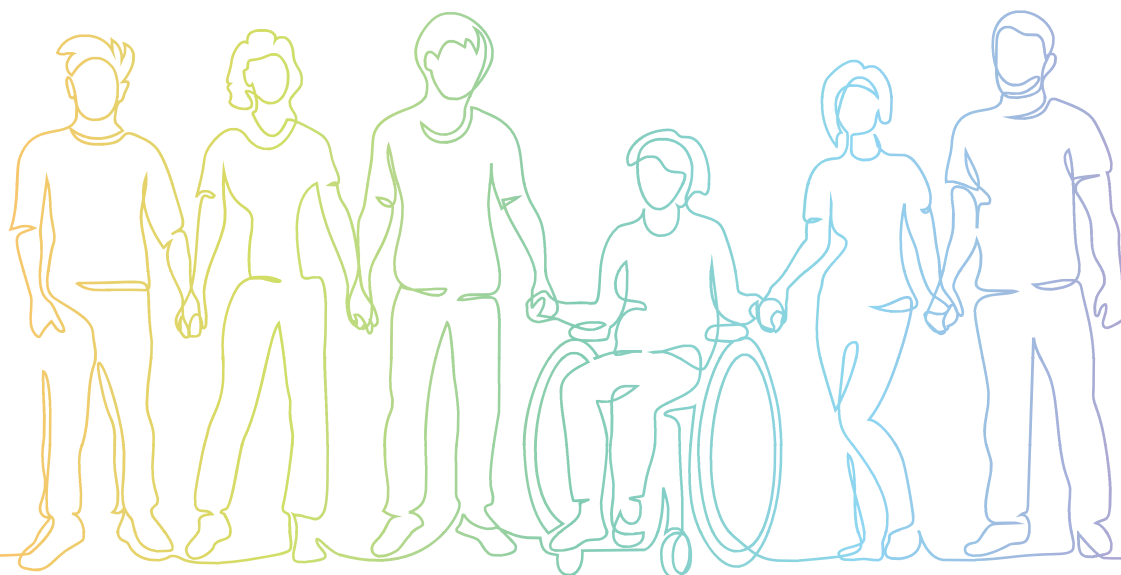

With this report, we realign our focus to the needs of our communities after a tumultuous three years with the COVID-19 pandemic. These shifts increased our focus on mental well-being, which has suffered significantly since the pandemic began. We continue to invest in numerous behavioral health strategies, including diverse clinical networks, to ensure our most vulnerable populations have access to mental health services. Like many areas across the country, our communities continue to face shortages in affordable housing. We have created new collaborations and invested in affordable housing initiatives to meet these needs. As we develop systems that ensure a more equitable experience, craft inclusive and impactful policies, and address other social drivers of health, those we serve will flourish. We strive to be resilient and agile – listening to the unique needs of each community we serve.

As we look to the future, we continue to learn how best to align the strengths and assets inherent in our organization with what we see in our diverse communities. We look forward to improving the health of those in the communities we serve and sharing those efforts with you.

Warmly,

Mikelle Moore
Chief Community Health Officer
Intermountain Healthcare

EXECUTIVE SUMMARY

Our Intermountain mission, helping people live the healthiest lives possible®, is best realized with a comprehensive understanding of the communities it serves. Therefore, since 2009, Intermountain Healthcare has engaged in a system-wide process for each of its hospitals and other communities served through clinics to identify local area health needs through a community health needs assessments (CHNA). This local, community approach enhances the understanding of what annually reviewed national benchmarking metrics reveal about community health. This community intelligence comprises of:

- Soliciting community input regarding local health needs and health disparities
- Collecting quantitative data on health indicators
- Prioritizing data to identify significant needs
- Making the CHNA results publicly available
- Developing implementation strategies to address the significant priorities
- Making the implementation plan publicly available
- Reporting progress on the IRS Form 990 Schedule H

As a result of this extensive needs assessment and prioritization process, described in the following pages, Intermountain Healthcare and each of its hospitals and communities served by clinics identified the significant health needs as:

Improve Mental Well-Being,

Improve Chronic & Avoidable Health Outcomes

Address & Invest in Social Determinants of Health

Intermountain Healthcare is a Utah-based, nonprofit system of 33 hospitals (includes a “virtual” hospital), a Medical Group with more than 3,800 physicians and advanced practice clinicians at 385 clinics, a health plans division called SelectHealth, and other health services. Helping people live the healthiest lives possible, Intermountain is widely recognized as a leader in clinical quality improvement and efficient healthcare delivery. Child and adolescent health needs are included in this report and highlighted in the Intermountain Primary Children’s Hospital CHNA summary. Primary Children’s is Intermountain’s pediatric specialty and referral hospital located in Utah that serves more than 1 million children living in a 400,000-square-mile service area.

The 2022 CHNA report informs Intermountain leadership, public health partners, and community stakeholders of the significant health needs in our communities. This intelligence allows hospitals and their local partners to develop strategies that leverage Intermountain and community resources to address those needs throughout the Intermountain system.

The Bear River Health Department (BRHD) is one of 13 local health departments that work to promote and protect the health of Utah’s residents and collaborates with us in this work. The BRHD was originally established in 1971 by the Utah legislature. The BRHD provides public health services to the residents of Box Elder, Cache, and Rich County with a mission to prevent disease, promote healthy lifestyles, and protect the community & environment.

The Patient Protection and Affordable Care Act (ACA) requires each nonprofit hospital to conduct a CHNA every three years and to develop an implementation plan to address, measure, and report the impact of significant health priorities. This report fulfills a vital component of that requirement by documenting the collection of reliable information through a community health needs assessment that allows the organization to develop meaningful implementation strategies. This report has been reviewed and approved by the Intermountain Board of Trustees, who has final responsibility for Intermountain’s actions and is thus the authorized body for each of its hospitals.

DEFINING THE COMMUNITY

Intermountain Healthcare

Intermountain Healthcare is a team of nearly 60,000 caregivers who serve the healthcare needs of people across the Intermountain West, primarily in Utah, Idaho, Nevada, Colorado, Montana, Wyoming, and Kansas. We are an integrated, nonprofit health system based in Salt Lake City, with clinics, a medical group, affiliate networks, hospitals, homecare, telehealth, health insurance plans, and other services, along with wholly owned subsidiaries including SelectHealth, Saltzer Health, Castell, Tellica, and Classic Air Medical.

Mission

Helping people live the healthiest lives possible®

Vision

Be a model health system by providing extraordinary care and superior service at an affordable cost.

Values

Integrity: We are principled, honest, and ethical, and we do the right thing for those we serve.

Equity: We eliminate disparities and create opportunities for caregivers, patients, members, and communities to thrive.

Accountability: We accept responsibility for our actions, attitudes, and health.

Trust: We count on and support one another individually and as team members.

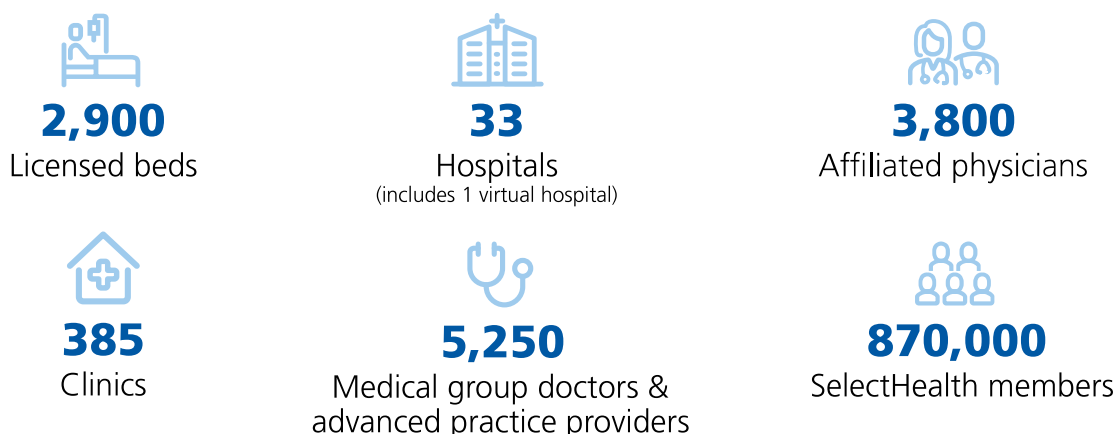

Excellence: We perform at the highest level, always learning and looking for ways to improve.

Mutual Respect: We embrace diversity and treat one another with dignity and empathy.

On April 1, 2022, SCL Health and Intermountain Healthcare merged into one organization. SCL Health and Intermountain Healthcare are already two of the nation's leaders in providing better healthcare outcomes for lower costs. SCL Health has a proven track record of efficiency across Colorado, Montana, and Kansas and excellent quality, safety, and patient satisfaction outcomes — and Intermountain Healthcare has similar success in Utah, Idaho, and Nevada. Combining their operational and clinical programs will strengthen that focus and is ongoing. Complete integration of the community health needs assessment process will occur by 2025. You can access the most recent SCL Health CHNA reports here:

<https://www.sclhealth.org/about/community-benefit/community-health-needs-assessment/>

Intermountain Healthcare is a Utah-based, nonprofit system of 33 hospitals (includes a “virtual” hospital, which is not a licensed hospital), a Medical Group with more than 3,800 physicians and advanced practice clinicians at 385 clinics, a health plans division called SelectHealth, and other health services. Helping people live the healthiest lives possible, Intermountain is widely recognized as a leader in clinical quality improvement and efficient healthcare delivery. Child and adolescent health needs are included in this report and highlighted in the Intermountain Primary Children’s Hospital CHNA summary. Primary Children’s is Intermountain’s pediatric specialty and referral hospital located in Utah that serves more than 1 million children living in a 400,000-square-mile service area.

As a nonprofit health system, Intermountain Healthcare is committed to making healthcare more affordable and providing quality care regardless of a patient’s ability to pay. In addition, Intermountain strives to create an inclusive, non-discriminating environment that offers meaningful and equitable access to all programs, benefits, and activities.

Our mission, *helping people live the healthiest lives possible®*, is supported by a clear vision and strong values that guide us. At Intermountain Healthcare, we believe financial circumstances should not dictate whether a person has access to basic medical care. That’s why we assist those in our communities who cannot pay for needed care. We also believe a comprehensive understanding of the communities we serve is essential to expanding our role as we focus even more strongly on prevention and wellness and strive to improve the health of those who live in our communities.

For this assessment, Intermountain defines its community by geography and the identities of the people it serves, including underrepresented, medically underserved, low-income, and minority populations. This report will only focus on the legacy Intermountain hospitals and other communities served by our clinics, specific to the states of Idaho, Nevada, and Utah. Intermountain worked closely with the Utah Department of Health & Human Services to overlap their definition of small areas with the communities we defined around each hospital. For our Nevada and Burley, Idaho communities, we worked closely with the local health district in each geography.

Using zip codes specific to each hospital community, based on where our patients live, Intermountain can understand the health needs of communities each hospital serves by neighborhood, county, and local health district in addition to a state-as-a-whole. In addition, each zip code and specific hospital community is aligned with public health geographic boundaries to encourage collaboration and more reliable data.

The Utah Small Areas are determined based on specific criteria, including population size, political boundaries of cities and towns, and economic similarity. The health measures that are reported by Small Areas are those with events occurring with sufficient frequency to be meaningful.

We also considered the unique demographics and identities of the communities we serve. For example, to better collaborate with and assess the needs of underrepresented and minority populations, we included communities whose preferred language is Spanish throughout our assessment. We also adopted a lifespan approach to this assessment by including, more intentionally, data indicators and health insights specific to children and seniors.

We also considered the unique demographics and identities of the communities we serve. For example, to better collaborate with and assess the needs of underrepresented and minority populations, we included communities whose preferred language is Spanish throughout our assessment. We also adopted a lifespan approach to this assessment by including, more intentionally, data indicators and health insights specific to children and seniors.

Thinking broadly about the opportunity to access healthcare in our communities, we recognize the following access points through hospitals in the Intermountain Healthcare service area:

Utah:

- Beaver Valley Hospital | Beaver
- Blue Mountain Hospital | Blanding
- Brigham City Community Hospital | Brigham City
- Cache Valley Hospital | North Logan
- Castleview Hospital | Price
- Central Valley Medical Center | Nephi
- Davis Hospital and Medical Center | Layton
- Garfield Memorial Hospital (operated by Intermountain Healthcare) | Panguitch
- Green River Medical Center | Green River
- Gunnison Valley Hospital | Gunnison
- Intermountain Alta View Hospital | Sandy
- Intermountain American Fork Hospital | American Fork
- Intermountain Bear River Valley Hospital | Tremonton
- Intermountain Cedar City Hospital | Cedar City
- Intermountain Delta Community Hospital | Delta
- Intermountain Fillmore Community Hospital | Fillmore
- Intermountain Heber Valley Hospital | Heber City
- Intermountain Layton Hospital | Layton
- Intermountain LDS Hospital | Salt Lake City
- Intermountain Logan Regional Hospital | Logan
- Intermountain McKay-Dee Hospital | Ogden
- Intermountain Medical Center | Murray
- Intermountain Orem Community Hospital | Orem
- Intermountain Park City Hospital | Park City
- Intermountain Primary Children's Hospital | Salt Lake City
- Intermountain Riverton Hospital | Riverton
- Intermountain Sanpete Valley Hospital | Mt. Pleasant
- Intermountain Sevier Valley Hospital | Richfield
- Intermountain Spanish Fork Hospital | Spanish Fork
- Intermountain St. George Regional Hospital | St. George
- Intermountain TOSH – The Orthopedic Specialty Hospital | Murray
- Intermountain Utah Valley Regional Hospital | Provo
- Jordan Valley Medical Centers | West Jordan
- Kane County Hospital | Kanab
- Lakeview Hospital | Bountiful
- Lone Peak Hospital | Draper
- Milford Valley Memorial Hospital | Milford
- Moab Regional Hospital | Moab
- Mountain Point Medical Center | Lehi
- Mountain View Hospital | Payson
- Ogden Regional Medical Center | Washington Terrace
- Salt Lake Regional Medical Center | Salt Lake City
- Shriners Hospital for Children | Salt Lake City
- St. Mark's Hospital | Salt Lake City
- Timpanogos Regional Hospital | Orem
- University of Utah Hospital | Salt Lake City
- Veterans Administration Salt Lake City Healthcare System | Salt Lake City

Idaho:

- Minidoka Memorial Hospital | Rupert
- St Luke's Magic Valley Medical Center | Twin Falls

Nevada:

- Centennial Hills Hospital Medical Center | Las Vegas
- Desert Springs Hospital Medical Center | Las Vegas
- Desert View Hospital | Pahrump
- Dignity Health Urgent Care | Henderson
- Henderson Hospital | Henderson
- Horizon Specialty Hospital | Las Vegas
- Kindred Hospital Las Vegas Flamingo | Las Vegas
- Mesa View Regional Hospital | Mesquite
- Mountain View Hospital | Las Vegas
- Southern Hills Hospital & Medical Center | Las Vegas
- Spring Valley Hospital Medical Center | Las Vegas
- St. Rose Dominican Hospital – Blue Diamond | Las Vegas
- St. Rose Dominican Hospital – North Las Vegas | Las Vegas
- St. Rose Dominican Hospitals – Rose de Lima Campus | Henderson
- St. Rose Dominican Hospital – Sahara Campus | Las Vegas
- St. Rose Dominican Hospital – San Martin Campus | Las Vegas
- St. Rose Dominican Hospital – Siena Campus | Henderson
- St. Rose Dominican Hospital – West Flamingo | Las Vegas
- Summerlin Hospital Medical Center | Las Vegas
- Sunrise Children's Hospital | Las Vegas
- Sunrise Hospital & Medical Center | Las Vegas
- Valley Hospital Medical Center | Las Vegas

Safety Net Clinics and Federally Qualified Health Centers (FQHC) providing healthcare services to underserved populations, including but not limited to uninsured, low-income, and people experiencing homelessness within the Intermountain Healthcare service area:

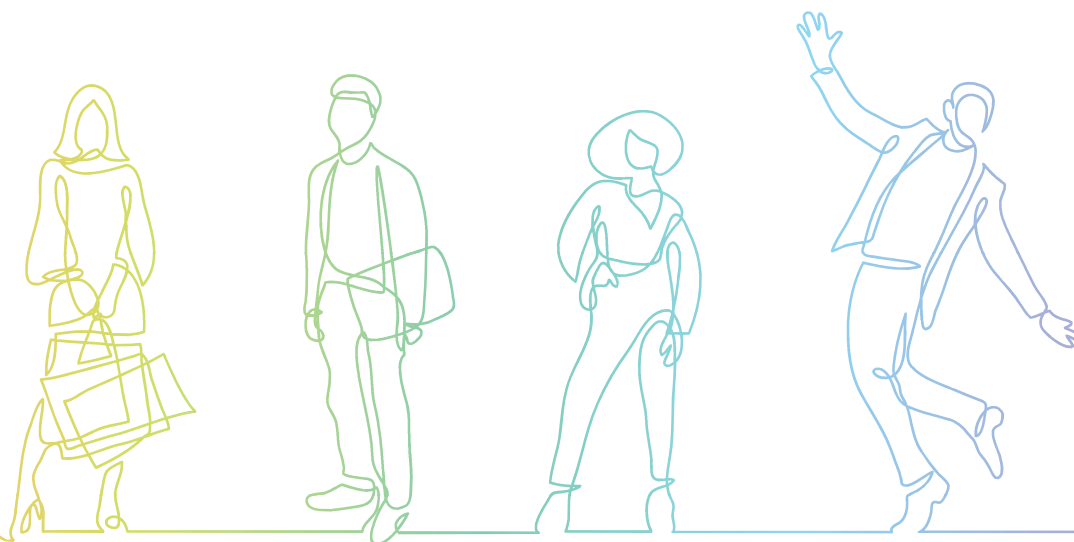

- | | | |
|---|---|--|
| • Bear Lake – Cache Valley Community Health Center, Logan | Intermountain Lincoln Elementary Clinic | Orem |
| • Bear Lake Community Health Center, Garden City | Neighborhood Clinic | Logan |
| • Bear River Community Health Center | North Temple Clinic | Salt Lake City |
| • Bear River Health Clinic | Rose Park Clinic | Salt Lake City- Metro |
| • Box Elder Community Health Center | • Kanosh Community Health Center | South Jordan |
| • Brigham City Community Health Center | • Koosharem Community Health Center | West Valley |
| • Cache Valley Community Health Center | • Maliheh Free Clinic | • SLC Community Health Centers, Inc. |
| • Clinica Medica Familiar | • Magna Exodus Clinic | 72nd Street Clinic |
| • Doctors' Volunteer Clinic | • Midtown Community Health Centers | Central City Clinic |
| • Family Health Services | Children's Clinic, Washington Terrace | Neighborhood Clinic |
| • Burley Medical Clinic | Davis County Medical Clinic Clearfield | Oquirrh View Clinic |
| • Kimberly Medical Clinic | Davis Medical Clinic Farmington | Stephen Radcliffe |
| • Rupert Medical Clinic | Hope Community Health Center | Ellis R. Shipp Clinic |
| • Family Healthcare | James Madison Elementary School-Based Health Center | • Stephen D. Ratcliffe Health Center, SLC |
| • Cedar City | Ogden 2240 Adams Ave | • South Main Clinic, SLC |
| • Cedar City East | South Salt Lake Clinic, Weber Medical and Dental Clinic | • Urban Indian Center of Salt Lake |
| • Millcreek High School Clinic | Weber Wellness Clinic | • Utah Partners for Health Clinics |
| • Hurricane Middle School Clinic | • Moab Free Health Clinic | Mid-valley Clinic, Midvale |
| • St. George | • Mountainlands Family Health Center | Mobile Clinic |
| • Fourth Street Clinic (Wasatch Homeless Clinic) | Provo | • Veterans Affairs Clinics |
| • Health Clinics of Utah | East Bay (Homeless Clinic) | Ogden VA Clinic |
| • Ogden | Payson | George E. Wahlen Department of Veterans Affairs Medical Center |
| • Provo | Wasatch | Western Salt Lake VA Clinic |
| • Salt Lake | • North West Community Health Center | Salt Lake Mobile Vet Center |
| • Hope Clinic | • Odyssey House Martindale Clinic | Orem VA Clinic |
| • Midvale | • Oquirrh View Health Center | Provo Vet Center |
| • Ogden | • People's Health Clinic | Price VA Clinic |
| | • Planned Parenthood Association Clinics | Moab VA Clinic |
| | Ogden | St. George Mobile Vet Center |
| | | • Volunteer Care Clinic |

Intermountain Community and School Clinics for Uninsured/Low-income People:

- North Temple Clinic
- Pamela Atkinson Lincoln Elementary School Clinic
- Rose Park Elementary School Clinic

A quick snapshot of the community we serve:

U.S. Census Quick Facts 2021 ¹	Utah	Idaho	Nevada	U.S.
Population (2021)	3,337,975	1,900,923	3,143,991	331,893,745
Population per square mile (2020)	39.7	22.3	28.3	93.8
Land area in square miles (2020)	82,376.85	82,645.14	109,860.46	3,533,038.28
Persons Under 18	28.4%	24.7%	22.2%	22.2%
Persons 65 years and over	11.7%	16.6%	16.5%	16.8%
Language other than English spoken at home, percent of persons age 5 and older	15.3%	10.8%	30.2%	21.5%
High school graduate or higher (age 25 years+)	93.0%	91.3%	86.9%	88.5%
Bachelor's degree or higher (age 25+)	34.7%	28.7%	25.5%	32.9%
Persons in poverty	8.6%	11.0%	14.1%	11.6%

COMMUNITY HEALTH NEEDS ASSESSMENT BACKGROUND

The Patient Protection and Affordable Care Act (ACA) requires all nonprofit hospitals to complete a community health needs assessment (CHNA) every three years. Understanding the needs of our community is core to Intermountain Healthcare's mission and vision. Our community health needs assessment (CHNA) and community health implementation strategy (CHIS) guide the strategic focus of our work. We work collaboratively with other organizations to understand the needs, disparities, and strengths within each community we serve.

Since 2009, Intermountain Healthcare has engaged in a system-wide process to support each hospital in the identification of local community health needs and better understand how to help people live the *healthiest lives possible*®. This community intelligence is comprised of:

- Thoughtfully defining the communities and people we serve to ensure equity and engagement
- Using evidence-based and scientifically valid frameworks and methods
- Soliciting community input regarding local health needs
- Collecting quantitative data on health outcomes and health-related indicators
- Prioritizing data to identify significant needs
- Identify resources potentially available to address significant needs
- Making the CHNA results publicly available
- Developing an implementation strategy to address the significant priority
- Making the implementation plan publicly available
- Report progress on the IRS Form 990 Schedule H

Since our 2019 publication, we have increased our efforts to work closely with internal and external partners to ensure equity is foundational and driving each of these steps, and that the process is designed to collaborate with and support underrepresented, medically underserved, low-income, and minority populations. Working closely with partners from the Office of Health Equity at the Utah Department of Health & Human Services, we prioritized the inclusion of the structural and social determinants of health as we designed the methodology and collected insights for this CHNA.

In the prior CHNA published in 2019, Intermountain strengthened its collaboration with public health, nonprofit, and government in Utah and southeastern Idaho communities. From data review and consultation with Intermountain, we identified these health priorities:

**Improve Mental
Well-Being,**

**Prevent Avoidable
Disease & Injury**

**Improve Air
Quality**

Intermountain continues to lead and seek collaborations to complete this work. The Utah CHNA Collaboration continues to function as a lead consulting and guiding agency and includes the Utah Department of Health & Human Services, local health districts, hospitals (including but not limited to Intermountain hospitals), and other stakeholders across the state of Utah. This collaboration, first created in 2018, aims to successfully design and implement a needs assessment that meets each organization's objectives. The purpose of this collaboration is to reduce redundancy, better engage community stakeholders, and bring alignment to the assessment and implementation planning processes that will ultimately improve the health of our communities.

2022 CHNA PROCESS PLANNING, GOVERNANCE, AND COLLABORATION

Our Intermountain mission of *helping people live the healthiest lives possible*® is best realized with a comprehensive understanding of the health needs of the community served by its hospitals, clinics, and health plans. Intermountain is committed to routinely assessing the community's health needs through a comprehensive assessment process that both engages members of the community and analyzes the most current health status information. Intermountain uses the assessment to inform its system-wide and local strategies to improve community health.

Since 2017, Intermountain's operational leaders monitor a Community Health Index aimed to help leaders understand public health outcomes more broadly. The selection of this metric was based on the following criteria:

- National benchmark capabilities, but also reported at a state level
- Longitudinal data available for trend analysis
- Metrics align with CHNA
- Utilized by community partners
- Inclusion of health-related drivers, such as the social determinants of health

America's Health Rankings® (AHR) from the United Health Foundation continues to be the source of this Community Health Index. Their yearly publication, the Annual Report, is the longest-running annual assessment of the nation's health on a state-by-state basis. This report aligns with the World Health Organization's definition of health and analyzes a comprehensive set of behaviors, public health and healthcare policies, community and environmental conditions, and clinical care data to provide a holistic view of the health of the people in the nation.²

World Health Organization definition of health: "Health is a state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity."

Utah: ranked 7th — decline from our last publication where we ranked 5th

Idaho: ranked 17th — decline from 16th

Nevada: ranked 40th — decline from 36th

America's Health Rankings 2021

While this metric allows us to quickly understand health in the communities we serve, it has some limitations in the scope of indicators included and its lack of community input. While we considers AHR to be the foundation of health indicators for Intermountain's 2022 CHNA process, the CHNA allows us to better understand local needs and disparities in addition to including important indicators that are relevant to the communities themselves.

The 2022 CHNA process was designed by Intermountain and performed in collaboration with the Utah CHNA Collaboration. Representatives from our Strategic Research team currently co-chair this collaboration with the Utah Department of Health & Human Services. This Collaboration is structured as a working coalition composed of representatives from all participating agencies. The common strategies of the Utah CHNA Collaboration include: (1) initiate relationships with important stakeholders; (2) create a community advisory panel and accountability structure complementary to internal leadership, guidance, and oversight; (3) organize and convene co-hosted community input meetings; (4) define shared health indicators for data collection and help improve the state query database; (5) prioritize health needs based on data; (6) integrate this collaboration of the community health needs assessment into implementation strategies that become the state- and system-wide goals and hospital-based clinical programs. Current organizational membership of the Utah CHNA Collaboration includes:

- Bear River Health Department
- Beaver Valley and Milford Hospitals
- Blue Mountain Hospital
- Central Utah Public Health Department
- Comagine Health
- Davis Behavioral Health
- Davis County Health Department
- Get Healthy Utah
- Huntsman Cancer Institute
- Intermountain Healthcare
- Kem C. Gardner Policy Institute
- Mountainstar Healthcare
- Salt Lake County Health Department
- San Juan Health Department
- Shriner's Hospital for Children
- Southeast Health Department
- Southwest Health Department
- Summit County Health Department
- TriCounty Health Department
- Uintah Basin Healthcare
- University of Utah Ken C. Gardner Policy Institute
- University of Utah Health
- Utah County Health Department
- Utah Department of Health & Human Services
- Utah Health Information Network
- Utah Hospital Association
- Wasatch County Health Department
- Weber Human Services
- Weber-Morgan Health Department

In Utah, this Collaboration is directed by a Community Health Advisory Panel, which has a formal charter that provides guidance regarding the purpose and work of the Collaboration. The Community Health Advisory Panel is comprised of local health officers, local mental health authorities and leaders in the state of Utah. While this formal charter provides some guidance, the Utah CHNA Collaboration follows an equal participation process for decision-making and implementation. The Community Health Advisory Panel was originally convened in 2015 to provide public health expertise and community guidance to Intermountain in its CHNA and to formalize collaborations with the local health departments where Intermountain facilities are located. The success of the collaborative CHNA with local and state health departments has resulted in the panel members committing to expand the membership to share information, leverage resources, and measure and evaluate community health implementation strategies together for the benefit of people throughout our service areas. Membership on the Community Health Advisory Panel includes:

- Executive directors from all local health departments in Utah
- Leadership from the Association for Utah Community Health (Federally Qualified Health Centers)
- Leadership from Utah's public behavioral health system, Davis Behavioral Health, Southwest Behavioral Health Center, Utah Division of Substance Abuse and Mental Health, Wasatch Mental Health, and Weber Human Services
- Leadership from the Utah Hospital Association
- Representatives of Intermountain Community Health Team, Strategic Research Department, and Medical Group Clinics

In addition to these collaborations, the Intermountain Community Health Leadership Team and Executive Leadership Team provide further oversight to create alignment with internal strategies, manage resources, and support communication internally.

In Nevada and Burley, Idaho, we work closely with the local public health leaders and hope to establish similar collaborations in the future.

Final approval of the significant health priorities and CHNA report is given by the Intermountain governing Board of Trustees. The Affordable Care Act (ACA) requires the CHNA and Implementation Plans to be approved and adopted by "an authorized body of the hospital facility." An "authorized body of the hospital facility" means (i) The governing body (that is, the board of directors, board of trustees, or equivalent controlling body) of the hospital organization that operates the hospital facility." Intermountain Healthcare is governed by a Board of Trustees, which sets policy, creates goals, approves operating budgets, evaluates management's performance, and ensures Intermountain operates in the best interest of the community. While each hospital has a local governing board that was engaged in the CHNA process, they do not approve or manage the operations of the hospitals. The Intermountain Board of Trustees has final responsibility for Intermountain's actions and is thus the authorized body for each of its hospitals. Priorities were reviewed and approved by the Intermountain Board of Trustees on Wednesday, November 30, 2022.

2022 CHNA METHODOLOGY

Evaluation of 2019 CHNA

Intermountain's Strategic Research team was asked to gather feedback from internal and external stakeholders to understand how the CHNA process could be improved. This feedback was gathered through several focus groups and semi-structured interviews with both internal and external individuals who are part of the CHNA governing process. The primary recommendations from these evaluative conversations included:

- Thoughtfully re-engage the Utah CHNA Collaboration as we prioritize this work during the COVID-19 pandemic
- Gather more lived experiences related to community member's health needs and experiences, in addition to input from stakeholder meetings
- Assess the CHNA process in the context of emerging equity initiatives and frameworks

The general public was also encouraged to make comments through Intermountain's website after the publication of the 2019 reports. No comments were made.

Gather input from key stakeholders

Through coordination with the Utah CHNA Collaboration, Intermountain Healthcare, the Utah Department of Health & Human Services, and the local health district co-hosted the community input meetings. Invitees included representatives of the following groups:

- | | | |
|---|--|--|
| <ul style="list-style-type: none"> • Association of Utah Community Health (Utah's primary care association) • Comagine Health • Community-based mental health providers • Community libraries • Federally Qualified Health Centers (FQHCs) in Utah and Southeast Idaho • Idaho Department of Health and Welfare | <ul style="list-style-type: none"> • Idaho South Central Public Health District V • Local colleges and universities • Local mental health and substance abuse authorities • Local law enforcement • Local mayors and other elected officials • Local non-profit organizations • Resource and case management programs for uninsured, low-income residents | <ul style="list-style-type: none"> • Safety net clinics • School districts • Senior centers • Utah Department of Health & Human Services • Utah Local Health Departments • Utah Division of Substance Abuse and Mental Health • Utah Substance Abuse Advisory Council |
|---|--|--|

Invited participants, representing a broad range of interests, were invited to attend a community input meeting to share their perspectives on the health needs in their community. Staff from Intermountain or the Utah Department of Health & Human Services facilitated the meeting. Meetings were held either virtually or in-person, depending on the preferences of collaborative leaders and the risk of COVID-19 infection in the community at the time the meeting was scheduled. These community conversations took place between February – May 2022. The meeting was manually and digitally recorded and transcribed.

Prior to the meeting, community participants were asked to rank the health issues they felt were the most significant [survey questions available in Appendix D]. The results of the pre-survey were used to guide the conversation. Specific questions used to facilitate the conversation included:

1. What are the most significant health issues in your community?
2. Thinking about the individuals who you serve through your organization, do you think they would also consider mental health the top health issues for our community?
3. Do you think your community is motivated to remove barriers and prevent and/or treat mental health?
4. Do you think the community has what it needs (assets, resources, leader buy-in, etc.) to prevent and/or treat mental health?
5. What other significant health issues are on your mind that that could benefit from collective attention?
6. What are the greatest strengths in your community?
7. Where are there opportunities?
8. What other root causes, or social determinants, do we need to be thinking about?
9. As you start to think about opportunities for improving the quality of lives for the people you serve, at what level do you think there is the most opportunity for impact?
10. Thinking about your organization, which level are you most confident in your ability to design and implement health improvement programs and strategies?
11. How can we begin to work together to address these top health issues?
12. Who do we also need to engage to be effective in this work?
13. What additional programs, resources, interventions would solve, prevent, and/or treat these top health issues?

Transcripts of each meeting were reviewed for a qualitative, thematic analysis. Themes were analyzed by frequency (the number of times a topic is mentioned) and severity (weighted by notetakers as key comments that resulted in an empathetic response during the meeting) using Dedoose, a collaborative web-based tool designed for qualitative analysis.

Input meetings took place in the following locations and included participants from the surrounding communities of each location:

- Burley, ID (live, April 4, 2022)
- Delta, UT, with representation from Fillmore (virtual, April 18, 2022)
- Farmington, UT (virtual, September 28, 2021)
- Heber, UT (live, April 11, 2022)
- Logan, UT (virtual, February 15, 2022)
- Ephraim, UT (with representatives from Mt. Pleasant) (live, April 21, 2022)
- Murray (with representative from West Valley City), UT (virtual, March 22, 2022)
- Nephi, UT, with representation from Fillmore (live, April 21, 2022)

- Ogden, UT (virtual, March 3, 2022)
- Panguitch, UT (live, May 3, 2022)
- Park City, UT (virtual, March 15, 2022)
- Provo, UT (with representatives from American Fork, Orem, & Spanish Fork) (virtual, February 28, 2022)
- Richfield, UT (live, April 18, 2022)
- Riverton, UT (virtual, March 17, 2022)

- Sandy, UT (virtual, March 17, 2022)
- St. George, UT (virtual, March 24, 2022)
- Tremonton, UT (virtual, February 22, 2022)

Three additional community input meeting were held virtually. One with Primary Children's Hospital Youth Advisory Committee on March 3, 2022, to gather the youth perspective on their needs and those of their peers. A second was held with Primary Children's Hospital community partners on March 11, 2022 to discuss the health needs specific to children and adolescents in the state of Utah. Another was held with leaders and community members who are Spanish-preferred and serve the Hispanic and Latinx communities in Utah. This meeting was conducted entirely in Spanish on April 1, 2022.

As part of the Utah CHNA Collaboration, Intermountain also helped facilitate input meetings in Blanding, Dutch John, Roosevelt, and Vernal, Utah in April 2022. Although these communities are not directly within the organization's service areas, understanding the health needs throughout the entire state allows Intermountain to better collaborate with key partners and understand the resources available to address health needs and disparities.

An online survey, available in both English and Spanish, was sent to people who could not attend the community input meeting to encourage more representative feedback and engage all who were invited. Not all the people who received the invitation or follow-up survey responded to the request. Results from those who did participate are included in the results section of this report.

Written comments from the 2019 CHNA and implementation plans were also reviewed for key themes and suggestions regarding significant health priorities. No comments were made.

Gather perceptions of general public

Under the guidance of the Utah CHNA Collaboration, best practices and recommendations for methods to capture the general public's perceptions were reviewed and discussed. The primary objective of a general public survey is to capture lived experiences from a broader representation of individuals in addition to the community input meetings. Many organizations within the CHNA Collaboration had tried different methodologies (door-to-door surveys, social media polls, focus groups, etc.), but with varying success in representation and inclusion of community voices. In addition, all previously attempted methodologies had limitations when considering how to implement on a state level and recruit a representative group of participants, including underrepresented, medically underserved, low-income, and minority populations.

A final recommendation was made to add a qualitative, open-ended question to the Behavioral Risk Factor Surveillance System survey. The Behavioral Risk Factor Surveillance System (BRFSS) is the nation's leading system of health-related telephone surveys that collect state data about U.S. residents regarding

their health-related risk behaviors, chronic health conditions, and the use of preventive services². BRFSS has a robust and validated methodology to capture representation across geography, race, ethnicity, income, sexual orientation, and other important demographics.

The open-ended question, “What would you say are the top three physical and mental health concerns facing you, your family, and/or your community right now” was implemented in January 2019 after pilot testing. Data from this question was collected for one calendar year. The questions were placed at the end of the interview script.

Though the results from the data are limited due to the impactful reality of the COVID-19 pandemic and therefore results should be interpreted with caution. However, we believe the continued collaboration to include lived experiences and perceptions of the community at-large is an important part to the CHNA.

In an effort to better understand the needs and experiences of youth in our communities, Intermountain partnered with Salt Lake County Health Department on their Teen Health Film Festival.³ Students in grades 7–12 in Utah were invited to participate by creating a 30–60-second original short film discussing how they or their peers have shown resilience in the following topics: Mental Health, Physical Health or Social Health. Videos were coded by Intermountain Healthcare Strategic Research and findings were reviewed with Salt Lake County Health Department.

Review Health Indicators

The selection of reliable, meaningful health indicators was an important part of the 2022 CHNA. First, Intermountain created an inventory of health indicators used in the 2019 assessment and compared those indicators with published needs assessments and/or annual reports from the Utah Department of Health & Human Services and local health departments. Second, an extensive literature review of national reporting metrics, including AHR, and particularly those that allow for a better understanding of the social determinants of health and equity, also contributed indicators to the inventory. Third, members of the Utah CHNA Collaboration interviewed epidemiologists at the Utah Department of Health & Human Services and local health departments to identify additional indicators important to their own needs assessments and specific measures that have good reliability and availability.

Intermountain collaborated with the Utah Department of Health & Human Services Division of Data, Systems, and Evaluation to assemble available data on health indicators for the community Intermountain, and each hospital serves. The Utah Department of Health & Human Services Division of Data, Systems, and Evaluation has a web-based resource to support community health needs assessments and other data needs in the community called the Public Health Indicator Based Information System (IBIS). IBIS includes a large selection of community health indicators that allow users to understand health outcomes at a national, state, local health district, and neighborhood level. This website allows users to view, map, and analyze these indicators as well as understand racial/ethnic, age, sex, and other disparities. Analysts aggregated two or three years of data for each indicator to achieve a large enough sample size to create a reliable estimate for each health indicator. Appendix A contains data for many of the indicators reviewed, specifically those part of AHR, but additional analysis took place through the IBIS query system to better understand disparity and significant health needs by demographics within each indicator.

²<https://www.cdc.gov/brfss/index.html>

³Salt Lake County Health Department: Teen Health Film Festival <https://slco.org/health/teens/teen-film-fest/>

As previously mentioned, Intermountain and each specific hospital defined its service area using zip codes. These zip codes also align with the Utah Department of Health & Human Service's "Small Areas," which allows for the aggregation of publicly reported data through IBIS at a neighborhood level. Small area data is used frequently by public health and other partners to understand geographic disparities and communities with high needs. For details regarding all small areas in Utah and how each hospital community is defined, see Appendix B.

Data for Cassia Regional Hospital was not available through this methodology. As a result, Cassia Regional Hospital defined its community using zip codes that align with local public health efforts and County Health Rankings & Roadmaps. Data for our Nevada clinics also used zip codes.

Several other secondary data sources were reviewed to understand health needs, including Mental Health America, America's Health Ranking, Map the Meal Gap Hunger Study, the Autism and Developmental Disabilities Monitoring Network, and the CDC Modified Retail Food Environment Index.

Appendix C contains a list of all health indicators reviewed for the 2022 CHNA.

Prioritize

Intermountain engaged its internal and external partners in a rigorous prioritization process to identify significant health needs for Intermountain Healthcare and each of its hospital communities. Prioritization involved identifying dimensions by which to prioritize, analysis based on those dimensions, inviting key stakeholders to evaluate health issues based on those dimensions, and finally, calculating scores to identify the significant health needs.

Intermountain identified dimensions for prioritization using practices established by public health professionals.^{4,5,6,7,8} The dimensions reflect community health needs assessment best practices, ACA requirements, and Intermountain strategic goals.

Dimensions of prioritization included:

- **Affordability:** the degree to which addressing this health issue can result in more affordable healthcare
- **Alignment:** the degree to which the health issue aligns with Intermountain Healthcare's or stakeholder organization's mission and strategic priorities
- **Community input:** the degree to which community input meetings highlighted it as a significant health issue
- **Feasibility:** the degree to which the health issue is feasible to change, taking into account resources, evidence-based interventions, and existing groups working on it
- **Health equity:** the degree to which the health issue disproportionately affects population subgroups by race/ethnicity
- **Seriousness:** the degree to which the health issue is associated with severe outcomes such as mortality and morbidity, severe disability, or significant pain and suffering
- **Size:** the number of people affected by the health issue
- **Value:** the degree to which we have opportunity to positively impact and improve the quality of lives for people we serve

⁶National Association of County & City Health Officials. First Things First: Prioritizing Health Problems. Available at <http://archived.naccho.org/topics/infrastructure/accrreditation/upload/Prioritization-Summaries-and-Examples.pdf>

⁷Excerpted from Nancy R. Tague's The Quality Toolbox, Second Edition, ASQ Quality Press, 2004

⁸Duttweiler, M. 2007. Priority Setting Tools: Selected Background and Information and Techniques.

Each dimension was weighted equally. The dimensions of Affordability, Community Input, Health Equity, and Size were calculated using the Hanlon Method, a validated objective method for reviewing and prioritizing baseline data⁷. Following the Hanlon methods guidelines, analysts assigned ratings for each health indicator databased on the following criteria:

- **Affordability:** reduction of costs associated with addressing the health issue being small (1), moderate (2), or large (3), provided by Intermountain's Population Health Analytics team and validated using the Centers for Disease Control and Prevention.
- **Community input:** not mentioned by the community as an issue (1); mentioned, but not a common theme (2); common theme mentioned by several community members (3).
- **Health equity:** calculated by aggregating health indicators by age (65+), race, ethnicity, gender, education and income to identify potential health disparities. 1 = no disparity, 2 = disparity in two of the aggregates, 3 = disparity in three of more of the aggregates.
- **Size: prevalence:** 1 = 0 – 9%; 2 = 10 – 24%; 3 = ≥ 25%; incidence: 1 = 0-49 per 100k; 2 = 50-99 per 100k; 3 = 100+ per 100k. Scales reflect national metrics.

Key stakeholders were then asked to participate in a multi-voting technique to consider the dimensions of Alignment, Feasibility, Seriousness, and Value. Intermountain identified several groups throughout the organization to participate in this part of the prioritization process. After a presentation of the CHNA results and health needs identified through the Hanlon prioritization analysis, participants received an online survey to confidentially vote for the health priorities based on the previously mentioned dimensions. Participants included internal leaders, Intermountain Community Relations Committee Board members, and advisory panels.

Comprehensive prioritization results were reviewed by Intermountain's Executive Leadership Team and Regional Executive Teams, who approved the final significant health needs for the system. Priorities were reviewed and approved by the Intermountain Board of Trustees on Wednesday, November 30, 2022.

Significant Community Health Need:

Intermountain Healthcare reviewed the final calculation of priority scores based on ratings across the eight dimensions and identified the significant health needs for all hospital and clinic communities as:

**Improve Mental
Well-Being,**

**Improve Chronic & Avoidable
Health Outcomes**

**Address & Invest in Social
Determinants of Health**

CHNA RESULTS

Most of the results included in this report will focus on findings for our hospital communities in Utah and Idaho. Additional details regarding southern Nevada are available in supplemental reports.

Thematic Results of Community Input Meetings

Understanding both the community input and quantitative data from health indicators is essential to prioritizing health needs and creating meaningful implementation plans. The following summary reflects the overall themes from all community input meetings and includes the perspective of underrepresented, medically underserved, low-income, and minority populations and the organizations that advocate for them.

Participants in the stakeholder discussion group identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Suicide remarked as a prominent concern;
 - o Stigma in some communities;
 - o Financial pressures;
 - o Lack of coping skills being taught;
 - o Lack of providers, difficult to recruit new caregivers;
 - o Considered a top priority for most community leaders; and
 - o General lack of resources and assets to remove barriers.
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages. Barriers discussed:
 - o Obesity and diabetes;
 - o Lack of preventative health emphasis; and
 - o Cost and access of health care.
- Substance use and Misuse:
 - o Tied into mental health, self-medicating;
 - o Lack of detox and treatment facilities in rural communities; and
 - o Homelessness.
- Other community concerns include:
 - o Inflation;
 - o Cost of housing;
 - o Lack of Spanish speaking providers;
 - o Domestic violence and Adverse Childhood Experiences;
 - o Intergenerational poverty; and
 - o Nutrition and hunger.
- Most noted Community Strengths include:
 - o Education;
 - o Access to outdoor recreation; and
 - o Strong social connections and family life.

- Most noted Community Opportunities
 - o Affordable, safe quality housing;
 - o Low crime, safe neighborhoods;
 - o Celebration of Diversity;
 - o Transportation;
 - o Childcare/after school programs;
 - o Access to high speed-internet in rural communities;
 - o Knowledge of available resources; and
 - o Intermountain involvement in policy.

Summary of themes from the community input meeting with Spanish-preferred providers:

- Mental health is an issue of significant importance to the Latinx community. However, many still consider it a taboo subject.
- For those ready to ask for help, there are two primary significant barriers:
 - o access to affordable health insurance, especially for those who are undocumented
 - o the lack of Spanish speaking and culturally appropriate health care providers
- Latinos do not feel welcomed by health providers.
- The focus group participants argued that while leaders seek ways to give everyone access to insurance and the health care system finds and trains much-needed bilingual and bicultural providers, offering comprehensive services supported by bilingual and bicultural CHWs could be the bridge Utah needs.

Summary of themes from youth voice assessments:

1. The primary themes, or health-related issues, expressed and discussed in the films include:
 - Unhealthy nutrition or access to healthy foods
 - Social connections and friends
 - Physical health and exercise
 - Anxiety and Depression
 - School and Grades
 - Time management
2. Many of the videos blurred the line between mental health and social connections. Friendships and reaching out to others were a good solution; but with 19 of the 39 videos mentioning mental health concerns, not one mentioned reaching out for professional help.
3. In relation to physical health, most films focused on bodily health and image. While the youth demonstrated an understanding of nutrition and maintaining a balance in their diet many of the videos referencing weight and obesity focused on avoiding food. There was some inclusion regarding the importance of exercise.
4. Most of the youth in the videos had phones, computers, ear buds, etc. visible. The importance and presence of technology was obvious in the films. While some used this in their videos as a means for positive intervention, but most expressed the extra stress and anxiety technology and social media brought to their life.

Notable quotes

"Well again, we said rent, if that's the choice, it takes away from every other bucket and even a mortgage... You don't do preventative visits, even \$50 co-pay to go to the doctor. You're like 'Ah, it's just a mole.' Three years later, 'Ah, if I'd only.' So it's just making those choices and feeling like, 'well I need to feed my kids. I need to pay the childcare bill and I'm not going to do maybe a preventative visit or get that counseling service I know I need, but I have to pay a little bit out of pocket every single time and that adds up.'"

"I feel like mental health is still a big issue. [The pandemic] put people in a really vulnerable place. What to do, a lot of people, how to feed their families, things shut down...and if you don't have a church group or a close family, then you get into the suicide part because they don't see a way out. And so, I think in what I've seen, mental health still exists because people have a hard time getting out of that long time period."

Thinking about the mental health crisis] We have been undergoing a serious staff shorting crisis. We can't hire therapists. We can't get the workforce into our area... Where we are right now is we are still trying to see everybody that walks through the door, but we could definitely hire 50% more therapists than what we have right now. It's an issue. It's a scary thing."

"What I see is that within pediatrics in particular, having an empty stomach, if you're hungry, it's hard to focus on education. When we look at education, there's a very clear and direct correlation and probably causation of education and health care outcomes, then one of the levers we can pull is strong education. And if we want strong education, one of the levers we can pull is to ensure that kids are getting an education and are able to focus on their education instead of where they're going to get their next meal."

Results of General Public Survey

The primary objective of the general public survey, administered for one year in 2019 through BRFSS, was to capture a broader representation of individual perceptions in addition to the community input meetings. Results were analyzed by Qualtrics Text iQ.

Results of this survey showed that general public perceptions and stakeholder perceptions are well aligned, with mental health being a key priority. We also learned that "health" is not a top-of-mind concept, with more than a third of respondents answering they "don't know" or are "unsure" to the question.

Top 10 Concerns Count

Mental Health/ anxiety/depression	2728
Substance use/ abuse / addiction (Illegal/prescription)	1188
Obesity and weight issues	1000
Opioid use /opioid abuse/ opioid addiction	628
Suicide/teen suicide	603
Old age/ Aging health issues'	546
Cancer	510
Diabetes	447
Environment / pollution -Clean air, water	428
Exercise/lack of exercise / lack of strength	423

Prioritized Health Indicator Data

In addition to the qualitative information gathered through community input meetings, quantitative data were collected and analyzed. Using the IBIS system and County Health Rankings, among the previously mentioned secondary sources, an accurate understanding of disease burden was acquired. Though only select results of the significant health needs are shared in this report, additional details were collected and can be found again through the links available in Appendix A

Health-related indicator	Utah	Idaho	Nevada	Concern for Community
Adverse Childhood Experiences	15.5%	13.7%	13.4%	Y
Avoided Care Due to Cost	10.6%	10.4%	11.1%	Y
Dedicated Health Provider	74.3%	73.7%	66.8%	Y
Depression	18.9%	23.1%	17.6%	Y
Frequent Mental Distress	12.7%	15.0%	17.3%	Y
High School Graduation	80.8%	87.4%	84.1%	Y
HPV Immunizations	54.5%	45.0%	50.1%	N
Residential Segregation^	67	70	50	Y
Severe Housing Problems	14.1%	13.5%	18.5%	Y
Suicide Deaths*	21.0	21.5	21.0	Y
Uninsured	10.8%	9.7%	11.4%	Y

Data Source: America's Health Rankings | % indicates a percent of total adult population | *Deaths due to intentional self-harm per 100,000 population

^Index of dissimilarity, with higher values indicating greater segregation between Black and white residents, ranging from zero (complete integration) to 100 (complete segregation)

Detailed Results from Prioritization Survey

Results from the prioritization survey were collected using ranking items. The survey was distributed electronically through Qualtrics. Prioritization from Intermountain leaders and members of Intermountain's committees shows behavioral health concerns ranking at 2.83 out of a possible score of 3.0, access to primary care at 2.78, and chronic disease prevention and management at 2.77. There was one inconsistency with our Community Relation Committees and Advisory Boards scoring high school education at 3.0 compared to 2.11 for Intermountain leaders.

A few health-related issues were identified as top needs by the communities we serve, but not selected as final priorities. These issues include cancer screenings and treatments and access to prenatal care and improving birth outcomes. Intermountain will continue to consider ways to partner with organizations meeting these needs.

MENTAL WELL-BEING

Why are we focusing on mental well-being as a health priority?

According to the World Health Organization, mental health refers to “a state of well-being in which an individual realizes his or her own abilities, can cope with the normal stresses of life, can work productively, and is able to make a contribution to his or her community.”

Mental health is influenced by numerous factors, including biological and genetic vulnerabilities, acute or chronic physical health conditions, and environmental conditions and stresses. Of all mental health conditions, depression is the most common disorder. Major depression is defined as having severe symptoms that interfere with a person’s ability to work, sleep, study, eat, and enjoy life. Despite the availability of effective treatments for major depression, such as medications and/or psychotherapeutic techniques, it often goes unrecognized and untreated. Depression is a serious concern for children and adolescents as well, with 39% percent of adolescents in Utah reporting feeling sad or hopeless.¹⁰

Utah and Idaho have some of the highest suicide rates in the country. Overall, suicide is in the top ten leading causes of death in Utah, Idaho and Nevada. Suicide is the leading cause of death for Utahns ages 10 to 24. In Utah, it is the second leading cause of death for ages 25 to 44 and the fifth-leading cause of death for ages 45-64. In Idaho, suicide is the 2nd leading cause of death for Idahoans ages 10-44 and fourth-leading cause of death for ages 45-54. Throughout the state of Nevada, suicide is the second-leading cause of death for ages 10-34 and fourth leading cause of death for ages 35-54. All suicide attempts should be taken seriously. More people are hospitalized or treated in an emergency room for suicide attempts than those that are fatal.

Substance use disorders occur when regular use of alcohol and/or drugs impacts daily functioning, including health problems, disability, and inability to meet main responsibilities at home, work, or school. Drug poisoning deaths are a preventable public health problem; they are the leading cause of injury death in Utah, outpacing deaths due to firearms, falls, and motor vehicle crashes. Every month, 53 Utah adults and 22 Idaho adults die as a result of drug poisonings; of these, approximately three-quarters involve opioids. Utah and Idaho are particularly affected by prescription opioids, which are responsible for about half of the accidental and undetermined drug poisoning deaths in both states.

Poor mental wellbeing is highly prevalent in the communities Intermountain hospitals serve

The prevalence of frequent mental distress is steadily increasing in the communities Intermountain serves as well as nationally.

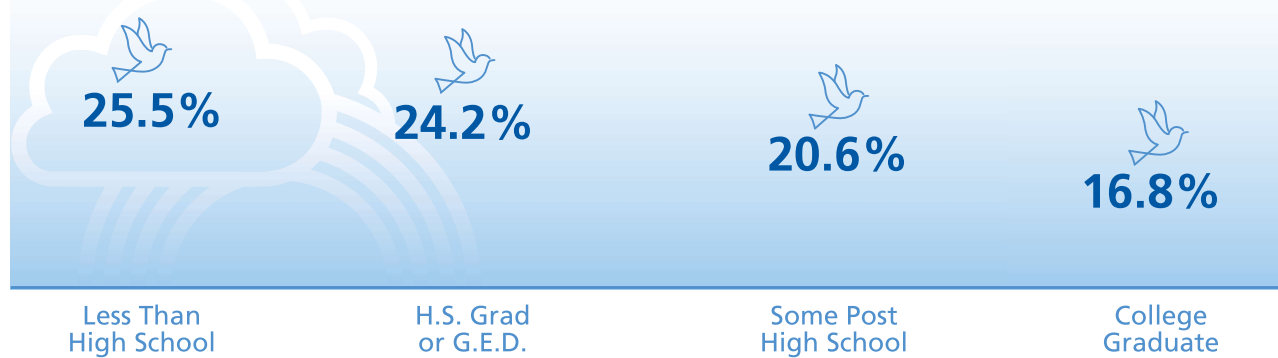

¹⁰ Public Health Indicator Based Information System (IBIS), Utah Department of Health & Human Services, 2018

Seven or More Days of Poor Mental Health in the Past 30 Days by Education Level, Utah, 2020

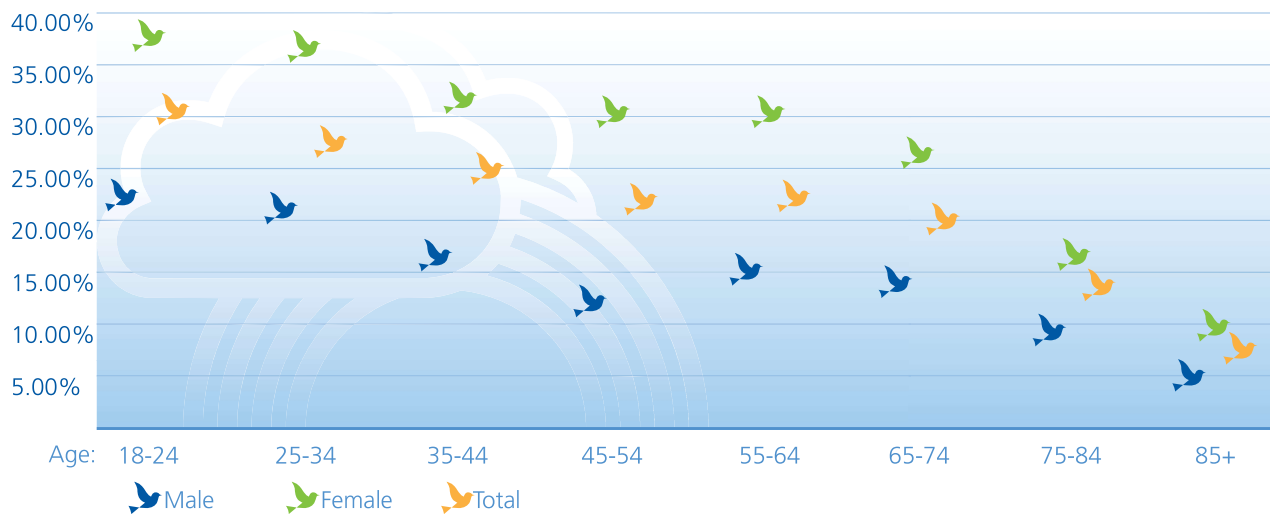

Socioeconomic status also influences frequent mental distress and depression.

Education Level

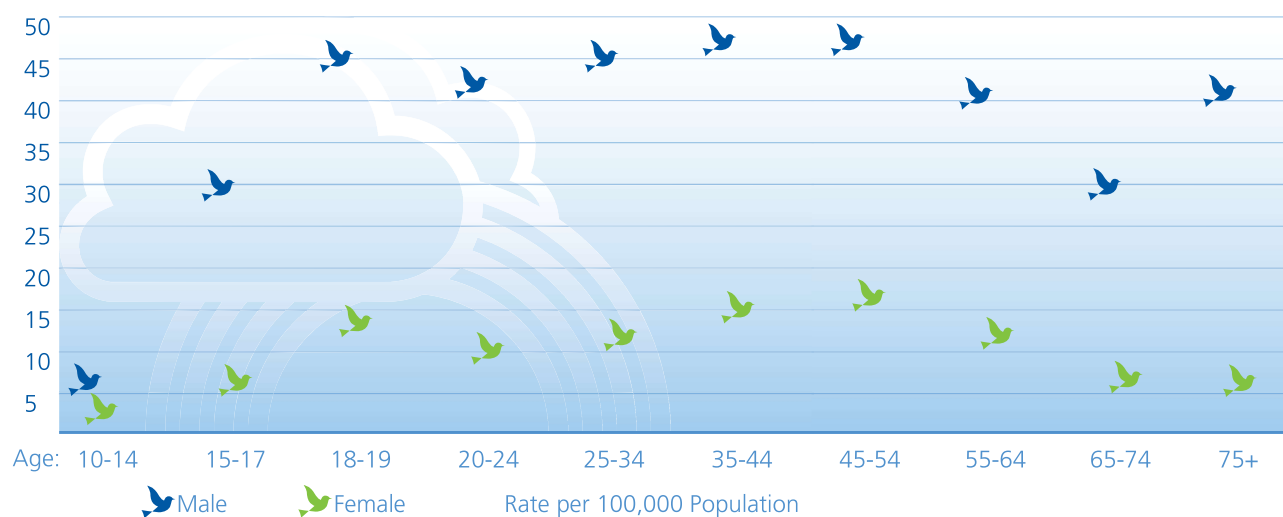

Depression Prevalence by Age and Sex, Utah, 2019-2021

Females, younger adults (18-34), and middle age (55-64) adults are more likely to experience depression.

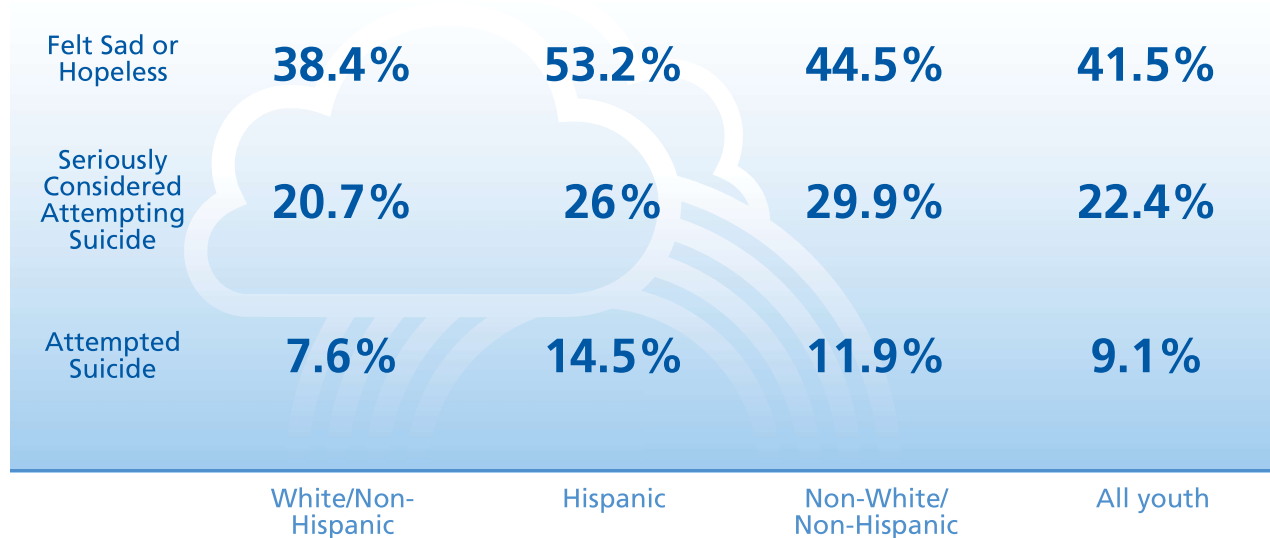

Suicide by Age Group and Sex, Utah, 2018-2020

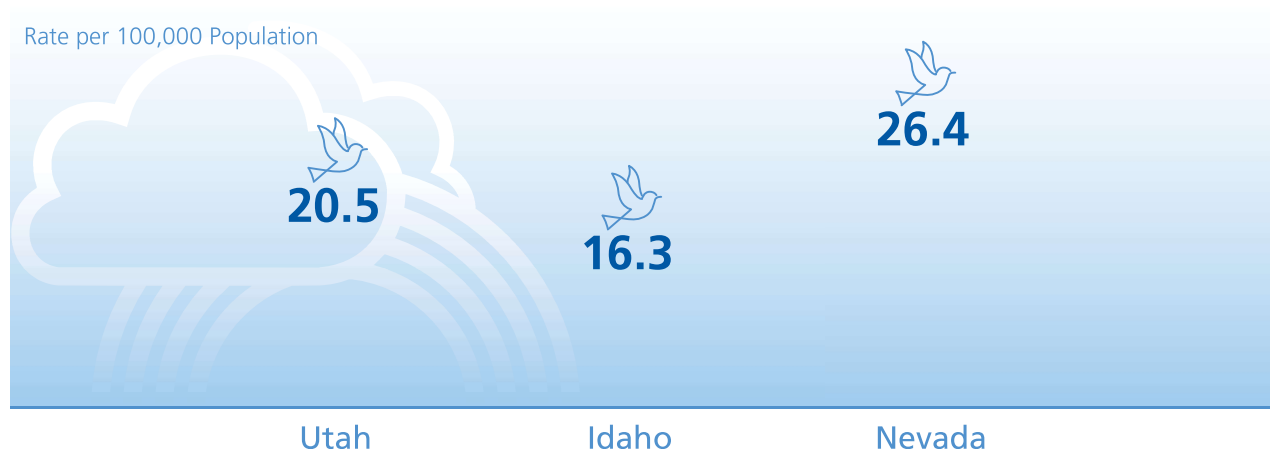

Males, however, are more likely than females to die by suicide. While rates of suicide deaths are highest among men between the ages of 35-64, suicide continues to be the leading cause of death for Utahns ages 10 to 24.

Youth feelings of sad or hopeless, seriously considering suicide, and/or making a suicide attempt are highly prevalent in Intermountain service areas. Minority youth tend to experience higher rates of these experiences compared to their white, non-Hispanic peers.

While Intermountain service areas are seeing some improvement in preventing drug poisoning deaths, it remains a leading cause of death. Males and older adults are more likely to die as a result of drug poisoning.

Mental well-being was the number one priority identified by every hospital community

Results from the prioritization exercise, which included specific hospital community representatives, showed mental health was the number one priority recommended. Stakeholders also felt suicide and substance use prevention are intrinsically tied to this priority and are included.

IMPROVE CHRONIC AND AVOIDABLE HEALTH OUTCOMES

Why are we focusing on prediabetes, high blood pressure, immunizations, vaping, and unintentional injury as health priorities?

Diabetes is a disease that can have devastating consequences. It is a leading cause of non-traumatic lower-extremity amputation, renal failure, heart disease, and blindness among adults younger than 75. This disease also has an enormous economic burden. Currently, about 80 million Americans aged 20 and older have prediabetes, a condition that puts them at high risk for developing diabetes. For many individuals, taking small steps, such as losing five to seven percent of their weight or increasing physical activity, can help them delay or prevent the development of diabetes. Without making lifestyle changes, approximately half of individuals diagnosed with prediabetes progress to diabetes within ten years.

High blood pressure (hypertension) is an important risk factor for heart disease and stroke, both of which continue to be a leading cause of death. In most cases, it can be effectively managed with medication and lifestyle changes (such as diet, exercise, and abstaining from tobacco use). Treatment works best when high blood pressure is identified early. Because high blood pressure does not produce symptoms, regular screening is recommended. Recently revised guidelines lowered the cutoff for what counts as high blood pressure, which means that even more people may unknowingly have it. In 2016-2017, the total direct cost of high blood pressure was \$52.4 billion. By 2035, it is projected that the total direct costs of high blood pressure could reach \$220.9 billion.¹²

Immunizations are one of the most cost-effective health prevention measures. The development of vaccinations has been cited by the U.S. Public Health Service as one of the Ten Great Public Health Achievements of the 20th Century. Vaccines play an essential role in reducing and eliminating the disease. Utah continues to have one of the lowest rates of these childhood immunizations and HPV immunization, which is administered to adolescents, in the nation.

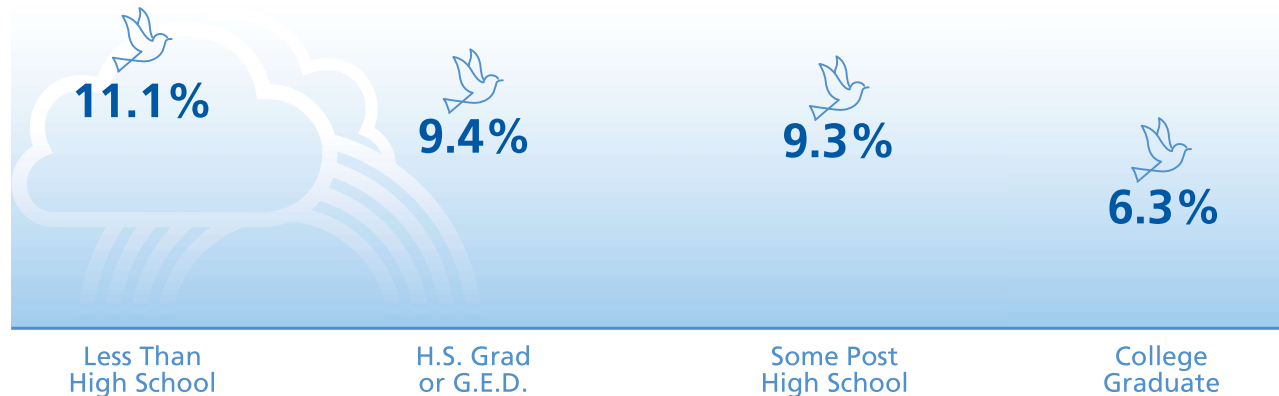

Electronic cigarettes or vape products are battery-powered devices that turn liquids into aerosol. They are marketed under a variety of different names but are most commonly referred to as electronic cigarettes, e-cigarettes, vape products, mods, or tanks. They may also be known as JUUL, Vuse, Suorin, MarkTen, and Blu. The liquids frequently contain nicotine and flavors. Since 2011, Utah has seen a sharp increase in vape product experimentation and use among youth and young adults. Given the uncertain public health impact of vaping and the potential for increasing nicotine addiction among young people, monitoring the use of vape products and enforcing and strengthening policies that regulate youth access are emerging public health priorities.

In both Utah and Idaho, unintentional injuries in children is a leading cause of death and life-long disability. In Utah, unintentional injuries account for 1,238 deaths and 9,715 hospitalizations each year, with thousands of other less severe injuries being treated. The top five leading causes of unintentional injury deaths for all ages in Utah and Idaho were poisoning, motor vehicle traffic crashes, falls, suffocation, and drowning (with falls being the leading cause of injury deaths for Utahns individuals 65 and older).

Avoidable diseases and injuries are highly prevalent

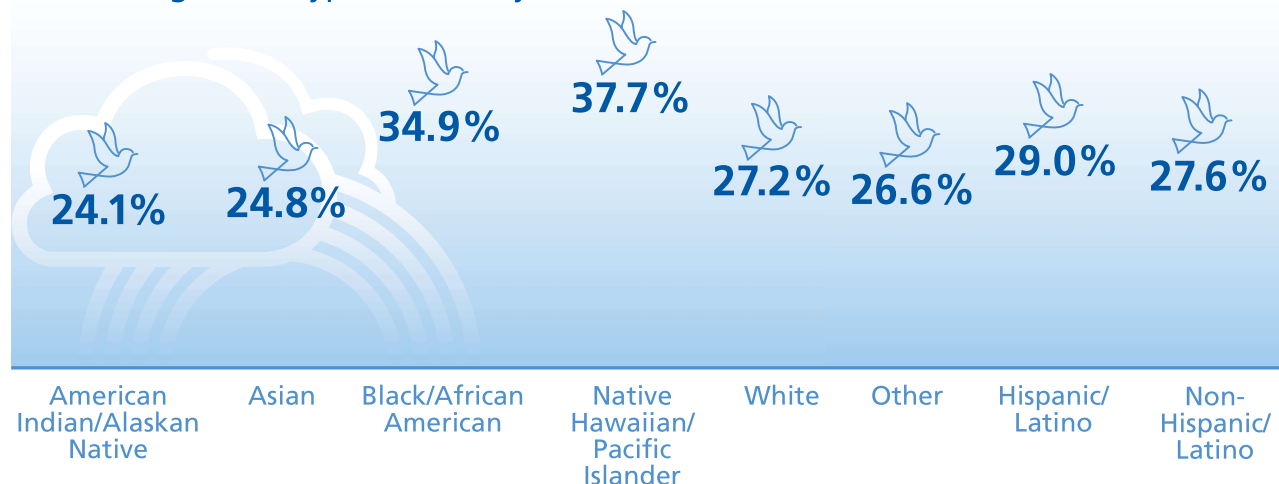

Diabetes rates are steadily increasing in both the Intermountain service areas and the United States. Social determinants, specifically education received, show significant disparities in this health outcomes.

Education Level – Adults With Diabetes by Education, Utah, 2021

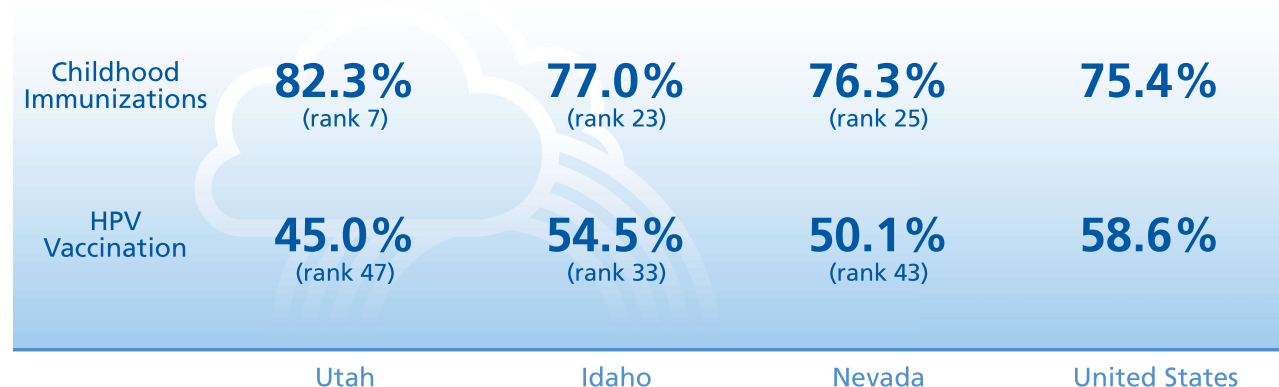

Minority populations in the Intermountain service area experience higher rates of high blood pressure (also known as hypertension).

Doctor-diagnosed Hypertension by Race, Utah, 2021

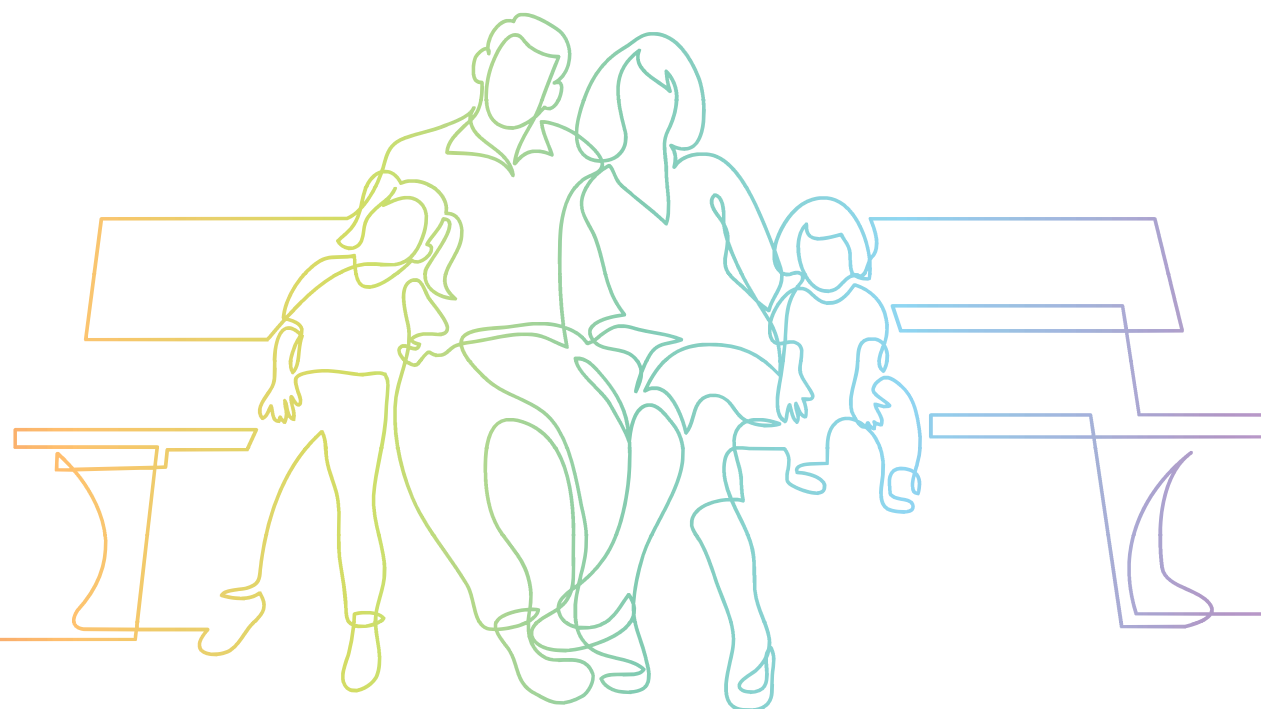

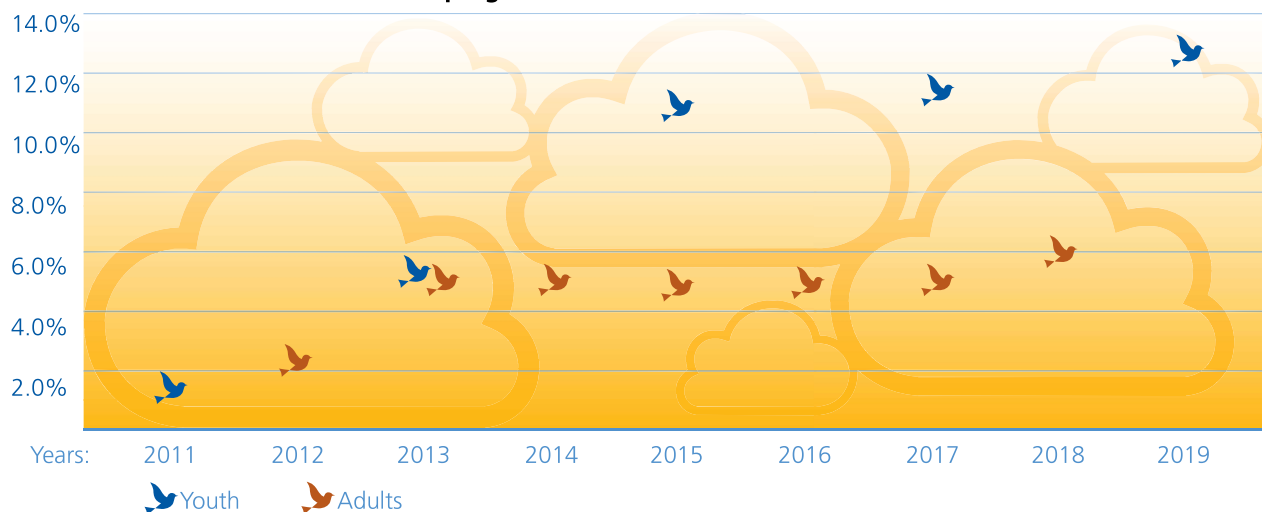

Intermountain service areas continue to have some of the lowest rates of childhood and adolescent immunizations in the nation.

Since their introduction to the U.S. market in 2006, electronic cigarettes (or vape devices) have become extremely popular, especially among youth and young adults. In Utah, youth vaping increased from 1.9% in 2011 to 12.4% in 2019. Nearly 25% of Utah students in grades 8, 10, and 12 have tried vaping. In comparison, only 5.6% of Utah adults currently use vape products and 18.4% ever tried vaping. This suggests the potentially harmful health effects of vaping are disproportionately affecting youth.

Even though Utah law prohibits the sale of vape products to people under the age of 19, 16- to 17-year-olds report the highest rate of vaping (15.1%) among all surveyed age groups.¹³ More than 70% of Utah teens who currently use a tobacco product tried a vape product first. Among adults, vaping is most common among 18- to 24-year-olds and least common among adults aged 65 and older.

Utah Trends in Youth and Adult Vaping

¹³ Utah Health Status Update, February 2020: Vaping & the Increased Risk for Youth Nicotine Addiction

¹⁴ Utah Child Fatality Review Annual Report, 2020 data

For the past decade, unintentional injuries and suicides have been the leading causes of child injury deaths in Utah and Idaho. While the rate of unintentional injury deaths has decreased, there is still work to be done to prevent these avoidable deaths and injuries in the Intermountain service areas.

The leading causes of unintentional injury deaths for children 1-19 in the Intermountain Utah area, where our Primary Children's Hospital serves¹⁴, are:

Number of Child Deaths Aged 0-18 By Manner, Utah, 2020

Number of Child Injury Deaths Reviewed by the Utah CFRC by Leading Causes of Death, Utah, 2020

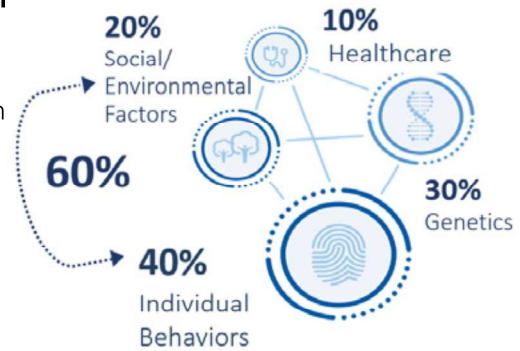

Avoidable diseases and injury were critical priorities identified by many hospital communities

Results from the prioritization exercise with stakeholders also showed chronic conditions related to obesity, specifically high blood pressure, and prediabetes, as significant health needs. Influenced by how the COVID-19 pandemic increased the vulnerability of individuals with chronic conditions, most internal leaders ranked this health issue as second only to mental well-being. Pediatric leaders ranked immunizations the same as mental well-being and advocated for the addition of injury prevention as it relates to suicide, violence, and death.

ADDRESS & INVEST IN THE SOCIAL DETERMINANTS OF HEALTH

Why We Are Focusing on the Social Determinants of Health

Addressing social determinants of health is important for improving health and reducing health disparities. Though health care is essential to health, it is less of a determinant or driver than other factors. Research shows that health outcomes are driven by an array of factors, including underlying genetics, health behaviors, social and environmental factors, and health care.

Numerous research studies consistently show that health behaviors, such as exercise, diet, and smoking, and social and economic factors are the primary drivers of health outcomes.

Addressing social determinants of health is not only important for improving overall health, but also for reducing health disparities that are often rooted in social and economic disadvantages.

Analysis of public health data by demographic characteristics is essential to the reduction and elimination of health disparities. The Minority Health and Health Disparities Research and Education Act of 2000 describes health disparities as differences in “the overall rate of disease incidence, prevalence, morbidity, mortality, or survival rates in the population as compared to the health status of the general population.”¹⁵ The definition can be applied to any demographic group, not just racial/ethnic minorities. Analysis by demographic characteristics also shows at what age certain diseases and conditions typically appear.

Health equity is the principle of pursuing the highest possible standard of health for all while focusing on those with the greatest obstacles. Social determinants have a large impact on disparities and health equity. In order to improve health outcomes for those with disparities, social determinants often need to be targeted for intervention and prevention efforts.

Health-related indicator	Utah	Idaho	Nevada
Adverse Childhood Experiences	15.5%	13.7%	11.1%
Avoided Care Due to Cost	10.6%	10.4%	13.4%
Dedicated Health Provider	74.3%	73.7%	66.8%
High School Graduation	80.8%	87.4%	84.1%
Residential Segregation	70%	67%	50%
Severe Housing Problems	14.1%	13.5%	18.5%
Uninsured	10.8%	9.7%	11.4%

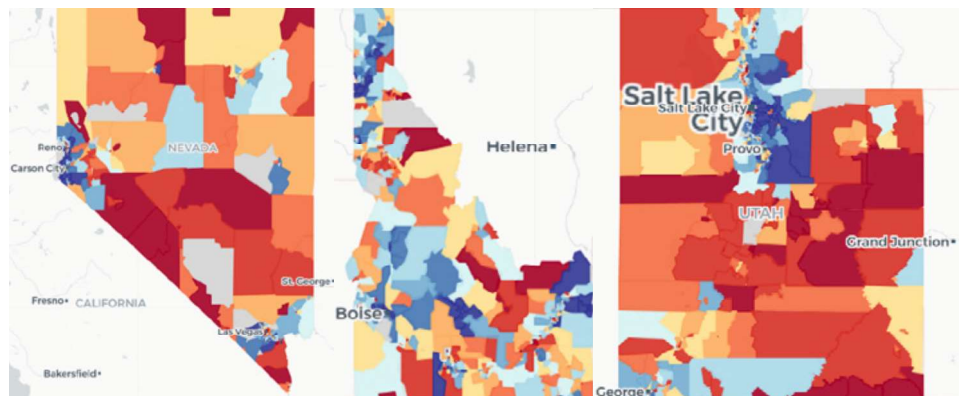

¹⁵ Public Health Indicator Based Information System (IBIS), Utah Department of Health & Human Services, 2021

Intermountain Healthcare is committed to serving the most vulnerable communities and populations. Income, education, and other economic and social risk factors affect individual health and well-being. We continue to use the Area Deprivation Index to understand these social determinants of health in the context of geography and continues to use this metric to understand the effect of the planned interventions. The Area Deprivation Index (ADI) is a validated, community socio-economic composite measure developed specifically for Utah by Intermountain. The ADI measures the distribution of socio-economic disadvantage within a community at the U.S. Census block group level. Higher socio-economic deprivation levels in communities (noted in orange and red on the map below) are often associated with poorer health and health delivery outcomes. While the ADI does not provide information on specific health needs in a community, it does provide context and information about segments of communities in which greater health disparities may be expected and where implementation strategies could be targeted.

Elements included in the Area Deprivation Index:

- Median family income (dollars)
- Income disparity
- Percent of families below the poverty level
- Percent of the population below 150 percent poverty threshold
- Percent of single-parent households with dependents under the age of 18
- Percent of households without a motor vehicle
- Percent of households without a telephone
- Percent of housing units without complete plumbing
- Percent occupied housing units
- Percent of households with less than one person per room
- Median monthly mortgage (dollars)
- Median gross rent (dollars)
- Median home value (dollars)
- Percent of employed persons over age 16 with a white-collar occupation
- Percent of the unemployed civilian labor force over the age of 16
- Percent of the population over age 25 with less than nine years of education
- Percent of the population over age 25 with at least a high school education

These maps illustrate the ADI for Nevada, Idaho, and Utah. Red indicates a community with higher socio-economic needs, blue indicates lower socio-economic needs.

The social determinants of health were identified by key stakeholders as a key barrier to achieving success in the other prioritized health needs in Utah

Facing the realities of economic factors such as inflation, unaffordable housing, and growing gaps in wealth and financial stability, our communities spoke loudly that these drivers of health must be part of any community health strategy. Social determinants of health, especially education, was ranked as the top priority by our advisory panels and community partners. As Intermountain strives to increase its sustainability efforts and as the largest employer in the state of Utah, there is also interest in becoming an example of how large organizations can contribute positively to social and economic drivers of health in the communities it serves.

DETAILED FINDINGS – ALTA VIEW HOSPITAL

Located in Sandy, Utah, a suburb of Salt Lake City, in Salt Lake County, Alta View Hospital has 66 staffed beds and offers a broad spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Alta View Hospital identified the significant health needs as: Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Long wait lists for providers;
 - o Lack of social skills and tolerance to trauma;
 - o Stigma in certain populations;
 - o Lack of culturally competent providers;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Unsure of resources and assets to remove barriers.
- Nutrition and food insecurity. Barriers discussed:
 - o Family resources being spent on housing costs rather than healthy food.
 - o “So if you’re spending the biggest portion of your income, you’re spending it on your rent that means paying for medication is going to be the least- the last thing to think about. Having healthy meals, you don’t think about it. So all these other things that we see in health care are not going to be a priority for you. The first thing would be covering your rent, your utilities, and that’s why housing is a big challenge. And also if you end up living on the street, you cannot be healthy. You cannot be homeless and healthy at the same time.”
- Drugs and alcohol use and misuse:
 - o Meth, Cocaine, Opioid use; and
 - o Co-occurring with mental health.
 - o “I wouldn’t have made it if it had not been for Alcoholics Anonymous or Fit to Recover...I think peer support is very valuable with individuals in the community because I’m very fortunate that I get to go out and work with individuals and help them with all of these, like go teach them public transportation, teach them how to food prep, teach them...Teach a man to fish, he can feed himself, but teach whatever and then they can feed an army. Really that educational piece with individuals.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages. Barriers discussed:
 - o Language barriers among providers; and
 - o Cost of health care.

- Other community concerns include:
 - o Homelessness
 - o Cost of housing;
 - o Lack of information resourced in other languages;
 - o Inflation; and
 - o Cost of healthcare.
- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoor recreation; and
 - o Strong social connections.
- Community Opportunities
 - o Clean environment;
 - o Low crime and safe neighborhoods;
 - o Emergency Preparedness;
 - o More support for community resources; and
 - o Affordable, safe housing.

DETAILED FINDINGS – AMERICAN FORK HOSPITAL

Located in the urban community of American Fork, Utah, American Fork Hospital has 89 staffed beds and offers a broad spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. American Fork Hospital identified the significant health needs as: Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Stigma and shame of asking for help;
 - o Stress from basic needs being unmet;
 - o Lack of cultural competence in mental healthcare;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “Just overall mental health, from a mental health standpoint and nursing standpoint, one in five people at any given time experience mental health struggle. It is a lot more common and just tying into the basic needs that we’re discussing. If the basic needs, aren’t being able to be reached. Food, water, shelter, then that exacerbates the stress and leads to anxiety. Just feeling like you’re trying to survive its survival mode, and eventually, it leads to depression. Just how mental health is the number one need overall but underlying that is not giving people the connection to a mental health provider. Maybe it’s addressing giving them access to someone who will help them manage their finances or connecting them to resources, to food, and to address those basic needs in the hierarchy of needs.”
- Hunger and Nutrition. Barriers discussed:
 - o Inflation causing food insecurity;
 - o “So what we see quite frequently is people having to choose between, they can’t afford the housing or they can’t afford the transportation, the gas. And so they’re cutting corners, and they don’t have enough food. And so that basic need of food, and I mean, people aren’t going to not pay for gas because they need to keep their jobs so they can stay in their homes, even though they can’t afford them. And so food’s one of the first things that they cut. And then last down the line, is so you get your food and you have a place to stay, but it’s you’re paying too much for it. You’re paying a lot for your gas, but then basically everything else just drops down the line. So many people who come into our pantries that have diabetes or other chronic health issues, won’t invest in the care that they need, because they just simply can’t afford it. When they can’t afford food, they can’t afford these things. And so it just is a trickle-down effect.”

- Immunizations. Barriers discussed:
 - o Hostile attitudes towards politics;
 - o “I think the pandemic has needed a little worse. Just like the polarization of people want to get vaccinated. People don’t want to get vaccinated. I feel like just right now, there’s a little bit more hostility when people have different beliefs. I feel like we can improve in being more understanding and just more accepting of people’s beliefs when it comes to religion, political beliefs, sexual orientation. I feel like we can do a much better job.”
- Other community concerns include:
 - o Inflation;
 - o Low wages, Poverty;
 - o Cost of housing; and
 - o Interpersonal violence.
- Community Strengths include:
 - o Education;
 - o Access to outdoor recreation;
 - o Strong social connections; and
 - o Low crime, safe neighborhoods.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs;
 - o Transportation; and
 - o Collaboration among organizations to provide resources.

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – BEAR RIVER VALLEY HOSPITAL

Located in the rural community of Tremonton, in northern Utah, Bear River Valley Hospital has 16 staffed beds and offers a spectrum of inpatient and outpatient medical services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Bear River Valley Hospital identified the significant health needs as: Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Suicide;
 - o Social isolation in children;
 - o Considered a top priority for community leaders;
 - o Lack of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “You grow up in a place where you perceive everything’s normal, and all of a sudden, you get things pulled out from underneath you and everybody seems to be free falling. We were having a struggle with suicide and things before this and now it seems like it’s way more on people’s mind than anything else”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Obesity;
 - o Gym closures due to COVID-19 restrictions; and
 - o Cost of health care.
 - o “A lot of people are delaying their health care, because as we’ve said, their money is required elsewhere, primarily with housing. So we don’t see them until they have an emergency and come to the ED where their costs are even higher and then it contributes to that cycle of debt or not being able to afford checkups and preventative health care that would be beneficial to them earlier in the process.”
- Other community concerns include:
 - o Inflation;
 - o Cost of housing;
 - o Intergenerational poverty; and
 - o Food insecurity.

- Community Strengths include:
 - o Education;
 - o Access to outdoor recreation;
 - o Strong social connections;
 - o Low crime, safe neighborhoods;
 - o Access to healthy foods; and
 - o Emergency Preparedness.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs;
 - o Focus on preventative health;
 - o Transportation;
 - o Childcare/after school programs; and
 - o Access to high speed internet

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – CASSIA REGIONAL HOSPITAL

Located in the rural community of Burley in southeast Idaho, the hospital has 25 staffed beds and offers a spectrum of inpatient and outpatient medical services. Cassia Regional Hospital is located on the boarder of Cassia and Minidoka counties and is a Critical Access Hospital. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Cassia Regional Hospital identified the significant health needs as: Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Lack of caregivers and providers;
 - o Social isolation related to COVID-19 restrictions;
 - o Lack of access to low-income families;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Resources available to remove barriers.
 - o “When I was doing HeadStart that we’ve seen a lot with our low-income families...A lot of people were in it only if we were able to find a resource that was affordable to them. But then also under language, that was really difficult to find. Sometimes we found bi-lingual, but the expense was just way too high. And then we had a complete population of about 12% that didn’t have health insurance.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages. Barriers discussed:
 - o Lack of providers due to rising health costs;
 - o Lack of preventative health motivation;
 - o Delay in services due to COVID-19 restrictions; and
 - o Cost of health care.
 - o “Well again, we said rent, if that’s the choice, it takes away from every other bucket and even a mortgage...You don’t do preventative visits, even \$50 co-pay to go to the doctor. You’re like ‘Ah, it’s just a mole.’ Three years later, ‘Ah, if I’d only.’ So it’s just making those choices and feeling like, ‘well I need to feed my kids. I need to pay the childcare bill and I’m not going to do maybe a preventative visit or get that counseling service I know I need, but I have to pay a little bit out of [pocket every single time and that adds up.’”
- Substance use and Misuse. Barriers include:
 - o Treating mental health with substances
 - o “With drug and alcohol use, I think that I spent a lot of time looking at if there’s a real connection to how child protective services functions. What you see in almost all of the child protective cases is a connection to drugs now, there’s a lot of neglect and abuse that happen to children because of that.”

- Other community concerns include:
 - o Social isolation for children;
 - o Mental health issues related to social media;
 - o Lack of community resource collaboration; and
 - o Lack of coping mechanisms being taught.
- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoor recreation;
 - o Strong social connections;
 - o Low crime, safe neighborhoods;
 - o Clean environment; and
 - o Education.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs;
 - o Transportation; and
 - o Emergency Preparedness.

DETAILED FINDINGS – CEDAR CITY HOSPITAL

Located in Cedar City, Utah, in Iron County, Cedar City Hospital has 48 staffed beds and offers a full spectrum of inpatient and outpatient services. It is the only hospital in Iron County. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Cedar City Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes;
 - o Chronic stress;
 - o Social media pressures; and
 - o Economic stress.
 - o Considered a top priority for community leaders;
 - o Some motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “I think issues that we see through shelter, through case management, through our food pantry, many more people are included in having issues with mental health. And again, I use the word severity because I feel as though in the past, we’ve had the resources to support our community and our clients. And it now feels as though things are off the charts and not- and again, severe, and many more people requiring more intense support on mental health issues.”
- Suicide tied into mental health:
 - o Embracing LGBTQ+ adolescents
 - o “I really like the idea of looking at mental health upstream, then really partnering with schools to address diagnosing earlier with appropriate diagnosis, appropriate treatment. And then, trying to tease through what is trauma-based and what we can help with short term treatment versus long term need and what that means for our adults in future years, if we can start to do this better with our youth.”
- Nutrition and Hunger:
 - o Schools being main food source for children.
 - o “What I see is that within pediatrics in particular, having an empty stomach, if you’re hungry, it’s hard to focus on education. When we look at education, there’s a very clear and direct correlation and probably causation of education and health care outcomes, then one of the levers we can pull is strong education. And if we want strong education, one of the levers we can pull is to ensure that kids are getting an education and are able to focus on their education instead of where they’re going to get their next meal.”

- Substance use and Misuse. Barriers include:
 - o Adolescent alcohol, vaping, drug use; and
 - o Lack of trauma resilience and training.
 - o “I think in our community the youth and adolescents don’t have much to do to keep them busy, so we have a very high alcohol usage among our adolescents and a very high vaping use and other drugs. And I think that without those support systems that really support mainly kids aged 13 to 20, that’s the population that I’ve seen misuse drugs and alcohol the most in my community.”
- Aging adults
 - o Lack of affordable housing;
 - o Increased mental health issues with social isolation;
 - o Dental care for individuals covered by Medicaid; and
 - o Nutrition and hunger.
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Lack of rheumatologists, endocrinologists, and neurologist in community; and
 - o Cost of health care.
- Other community concerns include:
 - o Access to dental care;
 - o Adverse Childhood Experiences and Trauma;
 - o Cost of housing; and
 - o Food insecurity.
- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoor recreation;
 - o Strong social connections;
 - o Low crime, safe neighborhoods;
 - o Education;
 - o Clean Environment; and
 - o Arts and cultural events.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs;
 - o Homelessness;
 - o Transportation;
 - o Policy support;
 - o Childcare/after school programs; and
 - o Healthy foods at food bank; and
 - o Grants for mental health care.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – DELTA COMMUNITY HOSPITAL

Located in the rural community of Delta in central Utah, Delta Community Hospital, a Critical Access Hospital has 18 staffed beds and offers a broad spectrum of inpatient and outpatient medical services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Delta Community Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Increase in child abuse reports due to substance use;
 - o Economic stress;
 - o Lack of providers;
 - o Language barriers among providers.
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Unsure of amount of resources and assets to remove barriers.
 - o “Since our offices are now open, we are seeing an increase in demand for our services, absolutely. Last summer, our agency started a mobile crisis outreach team that serves the six counties here in central Utah, and we’re seeing a lot of utilization of the crisis team. Accessed a lot of calls through law enforcement, emergency rooms, different places like that. So to me, I think things are kind of worse now than it was two years ago.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Lack of preventative health motivation and access;
 - o Lack of healthy coping mechanisms;
 - o Tied into mental health; and
 - o Healthcare access for Spanish speaking community.
 - o “Do you ever wonder if there’s a little bit of a waterfall effect, as far as just the mental health coming into play, not being able to cope or not knowing how to cope? I sometimes wonder if our youth really know how to cope anymore. Do they know how to actually deal with situation that come before them and how to actually process them mentally? But then when you have those issues, in my experience, diabetes and obesity, all that can come into play just within our mental and not taking care of our physical in a way that we should.”
- Nutrition and Hunger:
 - o “I have notices that a lot of the services to help people with childcare or food insecurity or housing, a lot of people don’t know where to go to find information to get those services...but my understanding is that some of those services are available and just people aren’t aware of how to access them.”

- Other community concerns include:
 - o School attendance and absences;
 - o Cost of housing, long wait lists for apartments;
 - o Intergenerational poverty; and
 - o Transportation.
- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoors;
 - o Low crime and safe neighborhoods;
 - o Strong social connections and family life;
 - o Education; and
 - o Clean environment.
- Community Opportunities
 - o Affordable Healthcare;
 - o Affordable, safe, quality housing;
 - o Arts and Cultural Events;
 - o Childcare and afterschool programs;
 - o Transportation;
 - o Celebration around diversity-resources lists in Spanish; and
 - o Collaboration of organizations to prevent duplication of efforts.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibispv-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – FILLMORE COMMUNITY HOSPITAL

Located in the rural community of Fillmore, Utah, Fillmore Community Hospital has 19 staffed beds and is one of two hospitals in Millard County. This Critical Access Hospital offers a broad spectrum of inpatient and outpatient medical services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Fillmore Community Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Increase in child abuse reports due to substance use;
 - o Economic stress;
 - o Lack of providers;
 - o Language barriers among providers.
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Unsure of amount of resources and assets to remove barriers.
 - o “Since our offices are now open, we are seeing an increase in demand for our services, absolutely. Last summer, our agency started a mobile crisis outreach team that serves the six counties here in central Utah, and we’re seeing a lot of utilization of the crisis team. Accessed a lot of calls through law enforcement, emergency rooms, different places like that. So to me, I think things are kind of worse now than it was two years ago.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Lack of preventative health motivation and access;
 - o Lack of healthy coping mechanisms;
 - o Tied into mental health; and
 - o Healthcare access for Spanish speaking community.
 - o “Do you ever wonder if there’s a little bit of a waterfall effect, as far as just the mental health coming into play, not being able to cope or not knowing how to cope? I sometimes wonder if our youth really know how to cope anymore. Do they know how to actually deal with situation that come before them and how to actually process them mentally? But then when you have those issues, in my experience, diabetes and obesity, all that can come into play just within our mental and not taking care of our physical in a way that we should.”
- Nutrition and Hunger:
 - o “I have notices that a lot of the services to help people with childcare or food insecurity or housing, a lot of people don’t know where to go to find information to get those services...but my understanding is that some of those services are available and just people aren’t aware of how to access them.”

- Other community concerns include:
 - o School attendance and absences;
 - o Cost of housing, long wait lists for apartments;
 - o Intergenerational poverty; and
 - o Transportation.
- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoors;
 - o Low crime and safe neighborhoods;
 - o Strong social connections and family life;
 - o Education; and
 - o Clean environment.
- Community Opportunities
 - o Affordable Healthcare;
 - o Affordable, safe, quality housing;
 - o Arts and Cultural Events;
 - o Childcare and afterschool programs;
 - o Transportation;
 - o Celebration around diversity-resources lists in Spanish; and
 - o Collaboration of organizations to prevent duplication of efforts.

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – GARFIELD MEMORIAL HOSPITAL

Garfield Memorial Hospital is owned by Garfield County and is managed by Intermountain Healthcare. Located in rural Panguitch, Utah, Garfield Memorial Hospital has 14 staffed beds and a broad spectrum of inpatient and outpatient medical services. It is the only hospital in Garfield County. Although it is not owned by Intermountain, in 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Garfield Memorial Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Lack of providers and training;
 - o Tied in with substance use-self medicating;
 - o Long wait lists; and
 - o Access issues.
 - o “We have very limited training, and the state of Utah right now has been taxed to come up with a mental health, I don’t even know what they’re going to call it, it’s a certification that they will actually do a 60, 120-hour certification that is only to deal with patients who are in crisis at the moment to try and get them to a safe place. It’s modeled a little after the police officer, the de-escalation that they do with the patients, and it will be modeled after that. It won’t be for every EMT, you will just-most agencies as we’ve talked about it amongst ourselves as directors, most agencies will try and get one or two in each one of their areas, so that if there is a problem with that they can actually just respond and help with that patient and really all we’re trying to do is to deescalate what’s going on and get them the help, get them to the hospital safely and get us to the hospital safely with them. And not have a crisis happen out there that now is a life threatening something that happens. So, it’s interesting, they’ve mandated that we do it. They haven’t mandated funds, so right now we’re still coming up with the funds to try and do that, but there is every agency in the state has a list of people that want to take this class.”
- Immunizations as a health need:
 - o Difficult to get vaccines in a rural community;
 - o Lack of nearby providers; and
 - o Distrustful of vaccines.
 - o “I think more people and we saw this actually with our COVID immunizations, they become very distrustful of authority and, and very more self-sufficient to a point of detriment sometimes. And so I think that they, it’s put an old fashioned word, they poo-poo the whole idea that mental health isn’t something that you just can’t say back up to.”
- Cancer. Barriers include:
 - o Lack of nearby providers; and
 - o Access.

- Other community concerns include:
 - o Cost of safe, quality housing;
 - o Airbnb interference with housing;
 - o Cost of gas in rural communities; and
 - o Lack of coping skills.
- Community Strengths include:
 - o Parks and recreation, access to the outdoors;
 - o Clean environment;
 - o Strong social connections and family life; and
 - o Low crime and safe neighborhoods.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Transportation;
 - o Emergency preparedness; and
 - o Good jobs, healthy economy.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – HEBER VALLEY HOSPITAL

Located in the rural community of Heber City, Utah, Heber Valley Hospital has 16 staffed beds and offers a broad spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Heber Valley Hospital identified the significant health needs as: Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Shortage of providers and increasing demand for services;
 - o Cost of care;
 - o Lack of mental health vocabulary and literacy;
 - o COVID stressors; and
 - o Stigma
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o "I think where we fall short, it has to do with the education. But what leads to mental health issues? What's going in our environment that brings on mental health issues? We talk about youth and adolescents, and what's happening in their environment, as parents that we can control to help with mental health. And I think as a community, and community services, we always talk about treatment. And treatment is critically important. And there's different facets of that treatment. There's critical care right now. And then there's medium health and long term health. What do we do to prevent mental health? What's going on in our kids lives and our own lives with social media, or exercise, or - and I don't think there's much time spent on that preventative, mental health issue."
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Obesity;
 - o Diabetes; and
 - o Cost of health care.
- Drug and alcohol use and misuse:
 - o Lack of long-term care options
 - o "If you take drugs or alcohol, we would like to help you if you do all these things, whereas a lot of people are self-medicating. They do it, not because they want to. They don't desire to be an addict, but they're an addict because they're an addict, because they're probably self-medicating."
- Other community concerns include:
 - o Cost of housing;
 - o Intergenerational poverty; and
 - o Lack of funding for resources.

- Community Strengths include:
 - o Clean Environment;
 - o Low crime, safe neighborhoods;
 - o Parks and recreation, access to outdoors; and
 - o Strong social connections and family life.
- Community Opportunities
 - o Celebration of diversity;
 - o Transportation services;
 - o Affordable, safe, quality housing; and
 - o Childcare and afterschool programs.

DETAILED FINDINGS – INTERMOUNTAIN MEDICAL CENTER

Located in Murray, Utah, a suburb of Salt Lake City, in Salt Lake County, Intermountain Medical Center has 472 staffed beds and offers a full spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Intermountain Medical Center identified the significant health needs as: Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and political stress;
 - o Lack of mental health literacy for parents;
 - o Stigma;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “I want to mention about mental health, is concerning the children. I don’t think that we still don’t know how to recognize the symptoms and we don’t help them to come down or recognize themselves that they are stressed. And we are not dealing with this. We are not helping the children the way we are supposed to. I know that we are, yes, learning. Well, you’re in the health profession, so you know more about this than me, but as working in the schools and as a parent, well, grandparent, I see these issues and I don’t feel there is enough information to help our children.”
- Suicide. Barriers discussed:
 - o Lack of cultural competency for outreach;
 - o Stigma and shame in asking for help.
 - o “As somebody that lost a sister to suicide, I think it’s so important, too, when thinking about the stigmas...my family thought that...or my mom would make the comment like, “Why are you being so lazy?” Where it’s like, “Get up and do something,” when it was something way more serious than what we ever thought it was. Because my mom also didn’t know how to deal with those things as well.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages. Barriers discussed:
 - o Diabetes;
 - o Lack of culturally diverse materials representing nutrition;
 - o Lack of diverse meal options in food pantries;
 - o Lack of nutritional literacy; and
 - o Cost of health care.
 - o “The main thing that we do is that we are a choice pantry. Even throughout the pandemic we’ve been choice. And so what that means is that people get to select for themselves. I’m sure there are more ways, more things that we could be doing. But that’s been effective for a bunch of reasons for our philosophy for how we run the pantry. And that is that people get to select. If we had materials

that said well fine. If your food context is pacific Asian, here're some things that are healthy foods or ways to make them that are good, that would be helpful. Or if your context is Guatemalan, here are some things. So that it is not just eat healthy that has American context. Don't go to McDonald's. There's gotta be more to it than that."

- Other community concerns include:
 - o Poor economy;
 - o Interpersonal violence;
 - o Lack of community input; and
 - o Lack of knowledge regarding resources available.
- Community Strengths include:
 - o Parks and Recreation, Access to outdoor recreation;
 - o Strong social connections, family life;
 - o Celebration of diversity; and
 - o Arts and cultural events.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Emergency preparedness;
 - o Low crime, safe neighborhoods;
 - o Access to healthy foods;
 - o Transportation;
 - o Childcare/after school programs;
 - o Affordable healthcare; and
 - o Organizational collaboration.

DETAILED FINDINGS – LAYTON HOSPITAL

Located in Layton, Utah, a suburb in North Davis County, Layton Hospital is Intermountain Healthcare's newest facility and has 43 staffed beds, offering a spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Layton Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community, specifically in the context of equity:

- People are unfamiliar with what is different since this community is so homogenous
 - o Religious discrimination
 - o Feeling discrimination if not from Utah
 - o Considerations around senior centers where dominant religion is “preferred”
- Socioeconomic inequities
 - o See lack of accessibility to resources – when you don’t have your basics it is hard to go above and beyond.
 - o Distrust with government or local agencies
 - o Limited public transportation options
 - o Healthcare costs and making choices not to seek care
 - o Examples of what are we doing for people without digital access to receive access to care – COVID testing, etc. need a phone to access QR code, screening.
 - o Denied services due to not having digital resources
- Housing
 - o Nowhere to send homeless individuals, resource desert
 - o Rising cost of mortgages and rent, too many people paying 50% of income for housing
 - o Tough choices, do I pay my mortgage or my prescriptions? Which do I prioritize?
 - o Even less available for those who need affordable AND accessible housing, more and more
 - o seniors are in disability housing, young people with physical disabilities – less housing
 - o Landlords increasing rents so even housing voucher won’t cover the cost of housing
 - o Finding double and triple families in houses – too many people in one location to be sustainable or healthy
 - o Gentrification/mobile park closure in Layton, not an affordable swap
- Lack of understanding, especially of unknown (not necessarily ignorant)
 - o LGBTQ+ support
 - o Need safe places to speak or work through understanding along with educate
 - o Challenge of media polarization

- o It is often easier to build boards or decision-making groups of similar people, lack of representation
- o Education - People don't see or believe that we have a problem. People experiencing the problem don't know where to turn for help, we might not be the right person to do the educating (need to find and employ the right ones)
- o Community can't agree on what inequities are – they look different to different people and something triggers a person's thoughts toward inequity
- o People with positions of power and what they chose to do/or not to do
- o Takes more effort to address inequities
- o History and precedence - "easier to keep status quo"
- o Limited resources so equity efforts don't get prioritized

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – LDS HOSPITAL

Located in urban Salt Lake City, in Salt Lake County, LDS Hospital has 250 staffed beds and offers a broad spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. LDS Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Environmental factors and political unrest;
 - o Social isolation in children;
 - o Leads to untreated health conditions;
 - o Considered a top priority for community leaders;
 - o High motivation to remove barriers; and
 - o Lack of diverse voices regarding access to mental health needs and resources.
 - o “I’ve heard from folks of refugee background, for example, is that they’re unaware of the resources around them. So folks of refugee and immigrant background, just don’t have the network or the connections into what resources are available. And which is one reason I mentioned community health workers and other folks to make those to help people make the right connections into resources that are already available, I think we find that there are a lot of resources that are going unused or untapped. It’s not that people don’t want them, it’s that they don’t know they’re there”
- Other community concerns include:
 - o Access to healthcare;
 - o Access to Spanish speaking providers;
 - o Homelessness; and
 - o Intergenerational poverty.
- Community Strengths include:
 - o Arts and cultural events;
 - o Access to outdoor recreation;
 - o Strong social connections; and
 - o Celebration of diversity.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Emergency preparedness;
 - o Low crime, safe neighborhoods;
 - o Affordable health care;
 - o Health Literacy; and
 - o Engaging Intermountain in policy work

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – LOGAN REGIONAL HOSPITAL

Located in the urban community of Logan in northern Utah, Logan Regional Hospital has 128 staffed beds and a broad spectrum of inpatient and outpatient medical services. Logan Regional Hospital is one of two hospitals in Cache County. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Logan Regional Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Driven by financial stress;
 - o Disappearing stigma means more need for resources;
 - o Lack of caregivers;
 - o Affordability;
 - o Considered a top priority for community leaders;
 - o High motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o "I'm not terribly surprised when I looked at the last year to even just with not just our staff, but with clients we've seen more struggles with mental health. More angry clients, more outbursts, just issues in general, and the wear and tear of long-term stress on the psyche. And so I think it's both and challenges faced by our staff, mental illnesses not just due to COVID but other things that kind of come as a result of a lot of stress and struggles with mental health...I think we could say in the last two years, we've had more issues with clients threatening suicide or other challenges."
- Substance use and misuse
 - o Related to homelessness; and
 - o Lack of coping skills
 - o "The amount of time that folks spend homeless is increasing and with that comes increased barriers. They're more likely to go back to drugs or alcohol, if they struggle with those issues in the past, the longer they're homeless, and the more likely to lose a job if they have one. And it'll be more difficult to find a job, the longer the homelessness is."
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Obesity; and
 - o Cost of health care.

- Other community concerns include:
 - o Suicide;
 - o Domestic violence;
 - o Homelessness; and
 - o Affordable housing.
- Community Strengths include:
 - o Good jobs and health economy;
 - o Access to outdoor recreation;
 - o Strong social connections;
 - o Low crime, safe neighborhoods;
 - o Access to the outdoors;
 - o Arts and cultural events; and
 - o Transportation
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs; and
 - o Policy change to fund resources.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – MCKAY-DEE HOSPITAL

Located in the urban community of Ogden, in northern Utah, McKay-Dee Hospital has 312 staffed beds and offers a full spectrum of inpatient and outpatient medical services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. McKay-Dee Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Suicide;
 - o Considered a top priority for community leaders;
 - o Unsure of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “There’s been a ton of mental health resources during COVID, I think COVID exacerbated some of those issues, but I don’t know if we actually did a very good job of increasing access across the board. I think access was temporary when COVID hit, but as we normalize, sometimes we lose that open access the pandemic afforded a lot of people.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Obesity;
 - o Cost of healthy foods;
 - o Gym closures due to COVID-19 restrictions; and
 - o Cost of health care.
 - o “I think nutrition is also tied in with obesity and related conditions, because someone who is experiencing food insecurities, not necessarily hungry, but they might be eating not nutritionally dense foods that are better for their health, which can also lead to related health disparities in that group.”
- Nutrition and food insecurity. Barriers discussed:
 - o Lack of access to affordable and healthy foods; and
 - o Poverty and cost of living contributing to access.
 - o “We have a number of people still throughout the year who come to YCC, asking for food. And so I think CCS does an amazing job with food distributions. I’m kind of wondering if a mobile food pantry, or something maybe more accessible than where CCS is for people might be helpful. Or smaller satellite options for people to get access to healthy food, and free or affordable food.”
- Other community concerns include:
 - o Substance use;
 - o Cost of housing;
 - o Poverty; and
 - o Increase in Domestic abuse and violence.

- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoor recreation;
 - o Strong social connections;
 - o Arts and cultural events; and
 - o Transportation.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Emergency Preparedness;
 - o Affordable Healthcare and prescription costs;
 - o Low crime, safe neighborhoods;
 - o Clean environment;
 - o Childcare/after school programs;
 - o Access to healthy foods; and
 - o Policy involvement.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – OREM COMMUNITY HOSPITAL

Located in the urban community of Orem, Utah, Orem Community Hospital has 18 staffed beds and offers a broad spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Orem Community Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Stigma and shame of asking for help;
 - o Stress from basic needs being unmet;
 - o Lack of cultural competence in mental healthcare;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “Just overall mental health, from a mental health standpoint and nursing standpoint, one in five people at any given time experience mental health struggle. It is a lot more common and just tying into the basic needs that we’re discussing. If the basic needs, aren’t being able to be reached. Food, water, shelter, then that exacerbates the stress and leads to anxiety. Just feeling like you’re trying to survive its survival mode, and eventually, it leads to depression. Just how mental health is the number one need overall but underlying that is not giving people the connection to a mental health provider. Maybe it’s addressing giving them access to someone who will help them manage their finances or connecting them to resources, to food, and to address those basic needs in the hierarchy of needs.”
- Hunger and Nutrition. Barriers discussed:
 - o Inflation causing food insecurity;
 - o “So what we see quite frequently is people having to choose between, they can’t afford the housing or they can’t afford the transportation, the gas. And so they’re cutting corners, and they don’t have enough food. And so that basic need of food, and I mean, people aren’t going to not pay for gas because they need to keep their jobs so they can stay in their homes, even though they can’t afford them. And so food’s one of the first things that they cut. And then last down the line, is so you get your food and you have a place to stay, but it’s you’re paying too much for it. You’re paying a lot for your gas, but then basically everything else just drops down the line. So many people who come into our pantries that have diabetes or other chronic health issues, won’t invest in the care that they need, because they just simply can’t afford it. When they can’t afford food, they can’t afford these things. And so it just is a trickle-down effect.”

- Immunizations. Barriers discussed:
 - o Hostile attitudes towards politics;
 - o “I think the pandemic has needed a little worse. Just like the polarization of people want to get vaccinated. People don’t want to get vaccinated. I feel like just right now, there’s a little bit more hostility when people have different beliefs. I feel like we can improve in being more understanding and just more accepting of people’s beliefs when it comes to religion, political beliefs, sexual orientation. I feel like we can do a much better job.”
- Other community concerns include:
 - o Inflation;
 - o Low wages, Poverty;
 - o Cost of housing; and
 - o Interpersonal violence.
- Community Strengths include:
 - o Education;
 - o Access to outdoor recreation;
 - o Strong social connections; and
 - o Low crime, safe neighborhoods.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs;
 - o Transportation; and
 - o Collaboration among organizations to provide resources.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

2022 COMMUNITY HEALTH NEEDS ASSESSMENT – ORTHOPEDIC SPECIALTY HOSPITAL (TOSH)

Located in Murray, Utah, a suburb of Salt Lake City, in Salt Lake County, the Orthopedic Specialty Hospital (TOSH) is Intermountain's orthopedic hospital for in and out-patient services with 40 staffed beds. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. TOSH identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and political stress;
 - o Lack of mental health literacy for parents;
 - o Stigma;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o "I want to mention about mental health, is concerning the children. I don't think that we still don't know how to recognize the symptoms and we don't help them to come down or recognize themselves that they are stressed. And we are not dealing with this. We are not helping the children the way we are supposed to. I know that we are, yes, learning. Well, you're in the health profession, so you know more about this than me, but as working in the schools and as a parent, well, grandparent, I see these issues and I don't feel there is enough information to help our children."
- Suicide. Barriers discussed:
 - o Lack of cultural competency for outreach;
 - o Stigma and shame in asking for help.
 - o "As somebody that lost a sister to suicide, I think it's so important, too, when thinking about the stigmas...my family thought that...or my mom would make the comment like, "Why are you being so lazy?" Where it's like, "Get up and do something," when it was something way more serious than what we ever thought it was. Because my mom also didn't know how to deal with those things as well."
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages. Barriers discussed:
 - o Diabetes;
 - o Lack of culturally diverse materials representing nutrition;
 - o Lack of diverse meal options in food pantries;
 - o Lack of nutritional literacy; and
 - o Cost of health care.

- o “The main thing that we do is that we are a choice pantry. Even throughout the pandemic we’ve been choice. And so what that means is that people get to select for themselves. I’m sure there are more ways, more things that we could be doing. But that’s been effective for a bunch of reasons for our philosophy for how we run the pantry. And that is that people get to select. If we had materials that said well fine. If your food context is pacific Asian, here’re some things that are healthy foods or ways to make them that are good, that would be helpful. Or if your context is Guatemalan, here are some things. So that it is not just eat healthy that has American context. Don’t go to McDonald’s. There’s gotta be more to it than that.”

- Other community concerns include:
 - o Poor economy;
 - o Interpersonal violence;
 - o Lack of community input; and
 - o Lack of knowledge regarding resources available.
- Community Strengths include:
 - o Parks and Recreation, Access to outdoor recreation;
 - o Strong social connections, family life;
 - o Celebration of diversity; and
 - o Arts and cultural events.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Emergency preparedness;
 - o Low crime, safe neighborhoods;
 - o Access to healthy foods;
 - o Transportation;
 - o Childcare/after school programs;
 - o Affordable healthcare; and
 - o Organizational collaboration.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – PARK CITY HOSPITAL

Located in the rural community of Park City, Utah, Park City Hospital has 37 staffed beds and offers a broad spectrum of inpatient and outpatient medical services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Park City Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Adverse childhood experiences and trauma;
 - o Suicide;
 - o Providers and clinicians unable to afford housing;
 - o Considered a top priority for community leaders;
 - o High motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “I’m really curious about why we’re not asking questions about trauma and violence and abuse because adverse childhood experiences and violence and abuse really weave this traumatic thread through people’s lifespans. And it can cause a lot of the complexities, especially when it comes to mental health. Many people who’ve been impacted by trauma and abuse, utilize substances to cope with that.”
- Drugs and alcohol use and misuse:
 - o Misuse and stigma in Latinx community;
 - o Lack of Spanish speaking clinicians to meet demand;
 - o “Many people don’t think that our Latinx population are using as much, but there is a huge alcohol and drug problem with our Latinx population in our county too.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Obesity;
 - o Diabetes; and
 - o Undocumented residents have lack of access to health care.
 - o “A population that is still not doing screenings, whether it be diabetes, blood pressure, cancer screenings, just because of their undocumented status, they don’t have access to healthcare.”
- Other community concerns include:
 - o Low COVID-19 vaccination rate in lower-income communities;
 - o Cost of housing; and
 - o Services for Spanish speaking populations.

- Community Strengths include:
 - o Education;
 - o Access to outdoor recreation;
 - o Parks and Recreation;
 - o Clean environments;
 - o Strong social connections; and
 - o Low crime, safe neighborhoods.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Engaging Intermountain in policy work; and
 - o Connecting to Latinx voices.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – PRIMARY CHILDREN’S HOSPITAL

Primary Children’s Hospital is a pediatric specialty hospital located in urban Salt Lake City, Utah. This hospital is one of 24 Intermountain Healthcare owned and operated hospitals in Utah and southeast Idaho and is a regional pediatric Trauma I referral center for the Intermountain West. Primary Children’s has 332 staffed beds and a broad spectrum of inpatient and outpatient medical services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Primary Children’s Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Parent and other adults mental health issues;
 - o Social isolation in children, lacking conflict resolution skills;
 - o Lack of affordable treatment;
 - o Providers cannot meet high demand; and
 - o Fear and intergenerational trauma.
 - o Considered a top priority for community leaders;
 - o Lack of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “I think that’s another big part of mental health, is because children are not on these services that could give them access. And I think that that is really cause from public charge, not enough providers that maybe speak other languages, or just not having enough Medicaid providers in general in rural areas. I think that’s another big, important piece, is that access to care.”
- Suicide effecting children and adolescents:
 - o More risk in ages 10 and up
 - o “It’s only a subset of all kids who really are frankly at risk from a suicidal standpoint. And yet that’s what a lot of people are seeing has these, whether its suicidality, not being able to deal with the kids in crisis, seeing things on the SHARP survey, seeing things in our primary care settings, that raises it to the top. Whereas all these other things are things that clearly impact all kids. And yes, and we’re definitely seeing it in younger kids, but it’s something that’s certainly fortunately much rarer in the younger kids relative to the older kids.”
- Accidental Injury:
 - o “Injury is always at the top of the list of childhood and particularly adolescent morbidity, so that’s always going to be there. I think obviously addressing that at a population level is what works best. I work in the emergency department at Primary Children’s Hospital, and about 40% of our patient volume are injuries. 60% is illness...It’s been a big public health concern in pediatrics for a long time, and I imagine it will be.”

- Nutrition and Hunger affecting children:
 - o Financial stress;
 - o School meals paused due to COVID closures;
 - o Exclusion to communities that offer assistance to meet needs.
 - o “We have been working with certain school districts, mostly Salt Lake, Davis, and Ogden, and kind of looking at their different food pantries and really it’s just that access to getting fresh foods, fresh produce into food pantries, barriers with infrastructure, transportation, with food spoiling and things... There’s a lot of organizations supporting, but just when we ask, ‘can we add fresh food or produce?’ They’re like ‘no, that’s not going to happen.’”
- Other community concerns include:
 - o Immigration status;
 - o Uninsured children;
 - o Intergenerational poverty; and
 - o Lack of knowledge about resources available.
- Community Strengths include:
 - o Parks, recreation, and access to the outdoors;
 - o Strong social connections and family life;
 - o Arts and Cultural events; and
 - o Good jobs and healthy economy.
- Community Opportunities
 - o Transportation services;
 - o Safe, affordable, quality housing;
 - o Childcare and afterschool programs;
 - o Celebration of diversity;
 - o Affordable healthcare; and
 - o Policy and funding for resources.

A snapshot of health-related indicators and outcomes for children in Utah can be accessed through this link: <https://utahchildren.org/kidscount>

DETAILED FINDINGS – RIVERTON HOSPITAL

Located in Riverton, Utah, a suburb of Salt Lake City, in Salt Lake County, Riverton Hospital has 88 staffed beds and offers a broad spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Riverton Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Long wait lists for providers;
 - o Lack of social skills and tolerance to trauma;
 - o Stigma in certain populations;
 - o Lack of culturally competent providers;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Unsure of resources and assets to remove barriers.
- Nutrition and food insecurity. Barriers discussed:
 - o Family resources being spent on housing costs rather than healthy food.
 - o “So if you’re spending the biggest portion of your income, you’re spending it on your rent that means paying for medication is going to be the least- the last thing to think about. Having healthy meals, you don’t think about it. So all these other things that we see in health care are not going to be a priority for you. The first thing would be covering your rent, your utilities, and that’s why housing is a big challenge. And also if you end up living on the street, you cannot be healthy. You cannot be homeless and healthy at the same time.”
- Drugs and alcohol use and misuse:
 - o Meth, Cocaine, Opioid use; and
 - o Co-occurring with mental health.
 - o “I wouldn’t have made it if it had not been for Alcoholics Anonymous or Fit to Recover...I think peer support is very valuable with individuals in the community because I’m very fortunate that I get to go out and work with individuals and help them with all of these, like go teach them public transportation, teach them how to food prep, teach them...Teach a man to fish, he can feed himself, but teach whatever and then they can feed an army. Really that educational piece with individuals.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages. Barriers discussed:
 - o Language barriers among providers; and
 - o Cost of health care.

- Other community concerns include:
 - o Homelessness
 - o Cost of housing;
 - o Lack of information resourced in other languages;
 - o Inflation; and
 - o Cost of healthcare.
- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoor recreation; and
 - o Strong social connections.
- Community Opportunities
 - o Clean environment;
 - o Low crime and safe neighborhoods;
 - o Emergency Preparedness;
 - o More support for community resources; and
 - o Affordable, safe housing.

DETAILED FINDINGS – SANPETE VALLEY HOSPITAL

Located in the rural community of Mount Pleasant, Utah, Sanpete Valley Hospital has 18 staffed beds and offers a broad spectrum of inpatient and outpatient services. This Critical Access Hospital is one of two hospitals in Sanpete County. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Sanpete Valley Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Children needing mental health support in schools;
 - o Stigma;
 - o Financial stress; and
 - o Lack of providers.
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “And I think the biggest thing with mental health is education around mental health because I just think that people aren’t aware of what mental health looks like and how it affects families... I think because there’s a lack of knowledge and because it can be portrayed as really scary, and so far, out there that the word psychosis scares people or mania scares people, bipolar, those terms are scary on their own. They’re scary to experience...And this community specifically does not have enough mental health resources for the people that need it. And I think that everyone can benefit from mental health resources whether that’s talk therapy or any of the other range of things that are needed.”
- Suicide:
 - o Stigma of getting mental health care in a rural, small community;
 - o Older population not likely to engage in telehealth; and
 - o Long wait lists for treatment.
 - o “Our older adults are more likely to die by suicide than our young children. We always talk about our kids, and we don’t always talk about our older adults. You don’t hear about when they commit suicide, you don’t hear about in the paper you don’t, which I don’t think is bad things...And the stigma, I cannot hold a parenting class at the children’s center whose parents do not want to come because they don’t want their car to be seen in this parking lot in the counseling center.”
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Obesity;
 - o Related to mental health; and
 - o Lack of clinics in rural area.

- Other community concerns include:
 - o Substance use;
 - o Cost of housing; and
 - o Inflation of costs unsustainable for aging and elderly population.
- Community Strengths include:
 - o Strong social connections and family life;
 - o Clean environment;
 - o Low crime, safe neighborhoods; and
 - o Parks and recreation, access to outdoors.
- Community Opportunities
 - o Celebration of Diversity;
 - o Good jobs and healthy economy;
 - o Transportation services;
 - o Buy-in from politicians and local leaders; and
 - o Awareness of services and resources available.

A snapshot of health-related indicators and outcomes can be accessed through this link:

DETAILED FINDINGS – SEVIER VALLEY HOSPITAL

Located in the rural community of Richfield in central Utah, Sevier Valley Hospital has 24 staffed beds and a broad spectrum of inpatient and outpatient medical services; it is the only hospital in Sevier County. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Sevier Valley Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Affordability of mental health care;
 - o Tied in with substance use and misuse;
 - o Not enough law enforcement to transport children to the Children's Justice Center; and
 - o Stigma.
 - o Not considered a top priority for community leaders;
 - o Lack of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o "People are probably using substances to deal with just coping because at the Children's Justice Center, our forensic interview, so this isn't just for cases that are open, but cases that are bad enough that require a forensic interview. They've doubled since COVID."
- Nutrition and Hunger:
 - o "As someone who receives the Meals on Wheels and meals at the centers, I can attest to the nutrition and hunger figure there in terms of the great need in our community, and it doesn't seem to be subsiding in any way. I think that's been an increase with COVID and inflation and whatever else in terms of feeding people with the proper nutrition."
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Access to health care via transportation; and
 - o Cost of health care.
- Other community concerns include:
 - o Domestic violence;
 - o Cost of housing;
 - o Intergenerational poverty;
 - o Adverse Childhood Experiences and trauma;
 - o Social media pressures; and
 - o Access to dental care.

- Community Strengths include:
 - o Education;
 - o Clean environment;
 - o Strong social connections; and
 - o Low crime, safe neighborhoods.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Arts and cultural events;
 - o Transportation;
 - o Childcare/after school programs; and
 - o Connecting people to resources available.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – SPANISH FORK HOSPITAL

Located in Spanish Fork, Intermountain's newest built hospital has 33 staffed beds. While patients can receive care for any medical need, specialties of this hospital are women's health and medical/surgical services consistent with a community hospital. As part of the Intermountain Healthcare, Spanish Fork Hospital provides a convenient place to access an entire system of specialists when needed. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Sevier Valley Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Stigma and shame of asking for help;
 - o Stress from basic needs being unmet;
 - o Lack of cultural competence in mental healthcare;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o "Just overall mental health, from a mental health standpoint and nursing standpoint, one in five people at any given time experience mental health struggle. It is a lot more common and just tying into the basic needs that we're discussing. If the basic needs, aren't being able to be reached. Food, water, shelter, then that exacerbates the stress and leads to anxiety. Just feeling like you're trying to survive its survival mode, and eventually, it leads to depression. Just how mental health is the number one need overall but underlying that is not giving people the connection to a mental health provider. Maybe it's addressing giving them access to someone who will help them manage their finances or connecting them to resources, to food, and to address those basic needs in the hierarchy of needs."
- Hunger and Nutrition. Barriers discussed:
 - o Inflation causing food insecurity;
 - o "So what we see quite frequently is people having to choose between, they can't afford the housing or they can't afford the transportation, the gas. And so they're cutting corners, and they don't have enough food. And so that basic need of food, and I mean, people aren't going to not pay for gas because they need to keep their jobs so they can stay in their homes, even though they can't afford them. And so food's one of the first things that they cut. And then last down the line, is so you get your food and you have a place to stay, but it's you're paying too much for it. You're paying a lot for your gas, but then basically everything else just drops down the line. So many people who come into our pantries that have diabetes or other chronic health issues, won't invest in the care that they need, because they just simply can't afford it. When they can't afford food, they can't afford these things. And so it just is a trickle-down effect."

- Immunizations. Barriers discussed:
 - o Hostile attitudes towards politics;
 - o “I think the pandemic has needed a little worse. Just like the polarization of people want to get vaccinated. People don’t want to get vaccinated. I feel like just right now, there’s a little bit more hostility when people have different beliefs. I feel like we can improve in being more understanding and just more accepting of people’s beliefs when it comes to religion, political beliefs, sexual orientation. I feel like we can do a much better job.”
- Other community concerns include:
 - o Inflation;
 - o Low wages, Poverty;
 - o Cost of housing; and
 - o Interpersonal violence.
- Community Strengths include:
 - o Education;
 - o Access to outdoor recreation;
 - o Strong social connections; and
 - o Low crime, safe neighborhoods.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs;
 - o Transportation; and
 - o Collaboration among organizations to provide resources.

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – ST. GEORGE REGIONAL HOSPITAL

Located in St. George, Utah, in Washington County, St. George Regional Hospital has 245 staffed beds and offers a full spectrum of inpatient and outpatient services. It is the only hospital in Washington County. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. St. George Regional Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes;
 - o Chronic stress;
 - o Social media pressures; and
 - o Economic stress.
 - o Considered a top priority for community leaders;
 - o Some motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “I think issues that we see through shelter, through case management, through our food pantry, many more people are included in having issues with mental health. And again, I use the word severity because I feel as though in the past, we’ve had the resources to support our community and our clients. And it now feels as though things are off the charts and not- and again, severe, and many more people requiring more intense support on mental health issues.”
- Suicide tied into mental health:
 - o Embracing LGBTQ+ adolescents
 - o “I really like the idea of looking at mental health upstream, then really partnering with schools to address diagnosing earlier with appropriate diagnosis, appropriate treatment. And then, trying to tease through what is trauma-based and what we can help with short term treatment versus long term need and what that means for our adults in future years, if we can start to do this better with our youth.”
- Nutrition and Hunger:
 - o Schools being main food source for children.
 - o “What I see is that within pediatrics in particular, having an empty stomach, if you’re hungry, it’s hard to focus on education. When we look at education, there’s a very clear and direct correlation and probably causation of education and health care outcomes, then one of the levers we can pull is strong education. And if we want strong education, one of the levers we can pull is to ensure that kids are getting an education and are able to focus on their education instead of where they’re going to get their next meal.”

- Substance use and Misuse. Barriers include:
 - o Adolescent alcohol, vaping, drug use; and
 - o Lack of trauma resilience and training.
 - o “I think in our community the youth and adolescents don’t have much to do to keep them busy, so we have a very high alcohol usage among our adolescents and a very high vaping use and other drugs. And I think that without those support systems that really support mainly kids aged 13 to 20, that’s the population that I’ve seen misuse drugs and alcohol the most in my community.”
- Aging adults
 - o Lack of affordable housing;
 - o Increased mental health issues with social isolation;
 - o Dental care for individuals covered by Medicaid; and
 - o Nutrition and hunger.
- Chronic diseases associated with unhealthy weight and behaviors affecting physical health in all ages.
Barriers discussed:
 - o Lack of rheumatologists, endocrinologists, and neurologist in community; and
 - o Cost of health care.
- Other community concerns include:
 - o Access to dental care;
 - o Adverse Childhood Experiences and Trauma;
 - o Cost of housing; and
 - o Food insecurity.
- Community Strengths include:
 - o Parks and Recreation;
 - o Access to outdoor recreation;
 - o Strong social connections;
 - o Low crime, safe neighborhoods;
 - o Education;
 - o Clean Environment; and
 - o Arts and cultural events.
- Community Opportunities
 - o Affordable, safe quality housing;
 - o Celebration of Diversity;
 - o Affordable Healthcare and prescription costs;
 - o Homelessness;
 - o Transportation;
 - o Policy support;
 - o Childcare/after school programs; and
 - o Healthy foods at food bank; and
 - o Grants for mental health care.

A snapshot of health-related indicators and outcomes can be accessed through this link:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

DETAILED FINDINGS – UTAH VALLEY HOSPITAL

Located in the urban community of Provo, Utah, Utah Valley Hospital has 359 staffed beds and offers a broad spectrum of inpatient and outpatient services. In 2022, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible®. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Utah Valley Hospital identified the significant health needs as: **Improve Mental Well-Being, Improve Chronic & Avoidable Health Outcomes, and Address & Invest in the Social Determinants of Health**

What we heard from this community - participants in the community input meeting identified the following issues as key health needs in their community:

- Mental health affecting children and adults:
 - o Isolation as a result of COVID-19 changes and stress;
 - o Stigma and shame of asking for help;
 - o Stress from basic needs being unmet;
 - o Lack of cultural competence in mental healthcare;
 - o Considered a top priority for community leaders;
 - o High level of motivation to remove barriers; and
 - o Lack of resources and assets to remove barriers.
 - o “Just overall mental health, from a mental health standpoint and nursing standpoint, one in five people at any given time experience mental health struggle. It is a lot more common and just tying into the basic needs that we’re discussing. If the basic needs, aren’t being able to be reached. Food, water, shelter, then that exacerbates the stress and leads to anxiety. Just feeling like you’re trying to survive its survival mode, and eventually, it leads to depression. Just how mental health is the number one need overall but underlying that is not giving people the connection to a mental health provider. Maybe it’s addressing giving them access to someone who will help them manage their finances or connecting them to resources, to food, and to address those basic needs in the hierarchy of needs.”
- Hunger and Nutrition. Barriers discussed:
 - o Inflation causing food insecurity;
 - o “So what we see quite frequently is people having to choose between, they can’t afford the housing or they can’t afford the transportation, the gas. And so they’re cutting corners, and they don’t have enough food. And so that basic need of food, and I mean, people aren’t going to not pay for gas because they need to keep their jobs so they can stay in their homes, even though they can’t afford them. And so food’s one of the first things that they cut. And then last down the line, is so you get your food and you have a place to stay, but it’s you’re paying too much for it. You’re paying a lot for your gas, but then basically everything else just drops down the line. So many people who come into our pantries that have diabetes or other chronic health issues, won’t invest in the care that they need, because they just simply can’t afford it. When they can’t afford food, they can’t afford these things. And so it just is a trickle-down effect.”

- Immunizations. Barriers discussed:

<https://ibis.health.utah.gov/ibisph-view/community/snapshot/report/AllIndicators/GeoLHD/4.html?PageName=>

STRATEGIES TO ADDRESS THE HEALTH NEEDS

A comprehensive approach was used to identify the community health improvement strategies to address the significant health priorities from this community health needs assessment. Using Intermountain's Operating Model (an integrated framework to drive a culture of Continuous Improvement that aligns leaders and caregivers in achieving the goals of the organization), internal operational and clinical leadership councils, workgroups, and committees, along with input from external advisory panels formed through community input meetings—all experts in clinical care, public health, and human services and leaders in their local communities—guided the implementation planning process to create community health improvement strategies for Intermountain and each hospital's service area.

Community partners were identified and invited to participate in individual hospital input and strategic planning meetings. These meetings were co-hosted with local and state public health partners and held in the same session as the community input meetings described previously.

Intermountain worked with both internal and community partners to create a comprehensive inventory of existing local programs and interventions to address the identified health priorities, focusing on those evidence-based best practices with application to community health improvement initiatives. The community health implementation planning team assessed both internal and external proposed strategies and conducted literature reviews on evidenced-based programs that addressed the health priorities and demonstrated health improvement.

Community partners involved in this process include:

- Association of Utah Community Health (Utah's primary care association)
- Comagine Health
- Community-based mental health providers
- Community libraries
- Federally Qualified Health Centers (FQHCs) in Utah and Southeast Idaho
- Idaho Department of Health and Welfare
- Idaho South Central Public Health District V
- Local colleges and universities
- Local mental health and substance abuse authorities
- Local law enforcement
- Local non-profit organizations
- Resource and case management programs for uninsured, low-income residents
- Safety net clinics
- School districts
- Senior centers
- Utah Department of Health & Human Services
- Utah Local Health Departments
- Utah Division of Substance Abuse and Mental Health
- Utah Substance Abuse Advisory Council

Our Community Health Implementation Strategies include the following:

Improve Mental Well-Being

- Deploy Upstream Mental Well-Being Resources
- Expand Community-Based Suicide Prevention
- Improve Access to Behavioral Health Care
- Improve Suicide Focused Care
- Improve Caregiver Mental Well-Being
- Expand Opioid Harm Reduction Strategies
- Reduce Childhood Vaping

Improve Chronic and Avoidable Health Outcomes

- Increase Screening for Diabetes & High Blood Pressure
- Increase Chronic Disease Self-Management Programs
- Improve Access to Primary Care Treatment for Chronic Diseases
- Improve Flu & HPV Immunization Rates
- Expand Hold on to Dear Life Injury Prevention Campaign
- Deploy Community Health Workers

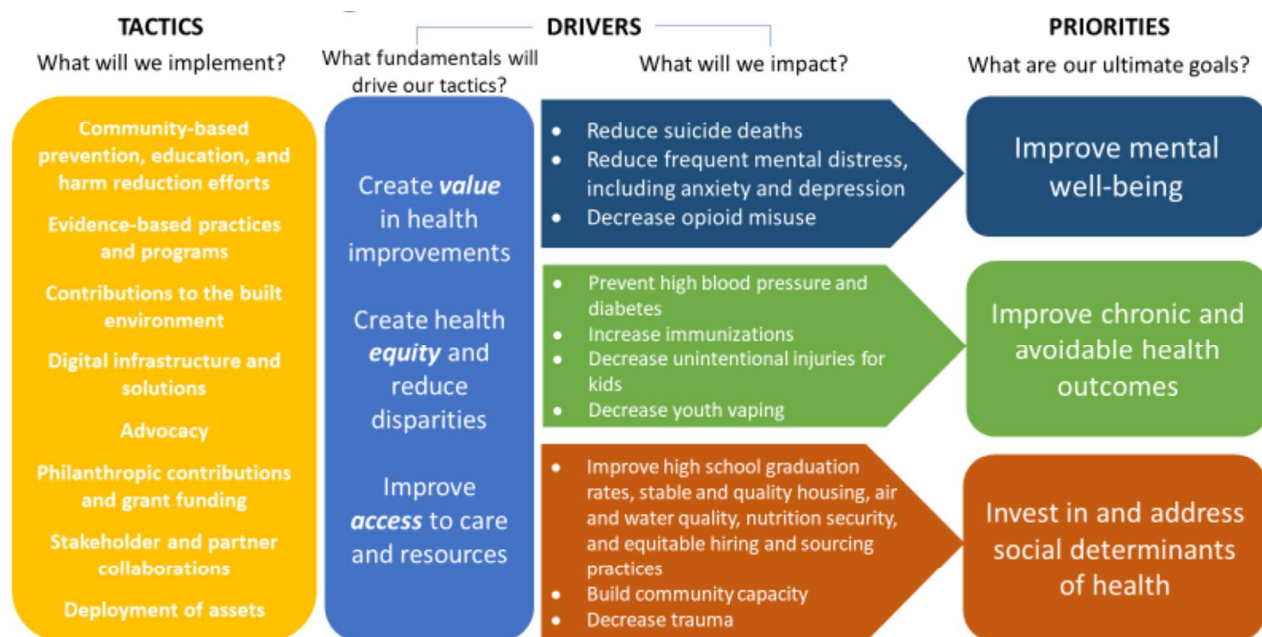

Address & Invest in Social Determinants of Health

- Expand Identification of Social Needs through Screenings & Analytics
- Implement Social Care Assistance Fund
- Expand Nurse Home Visitation Program
- Increase Healthcare Coverage
- Improve Nutrition Security
- Invest in Affordable Housing
- Deploy Sourcing & Hiring to Create Well-Being
- Improve Environmental Health Conditions
- Improve Educational Outcomes

The proposed strategies above will be developed into a formal written plan with greater details that will be included on each hospital website as required by federal regulation.

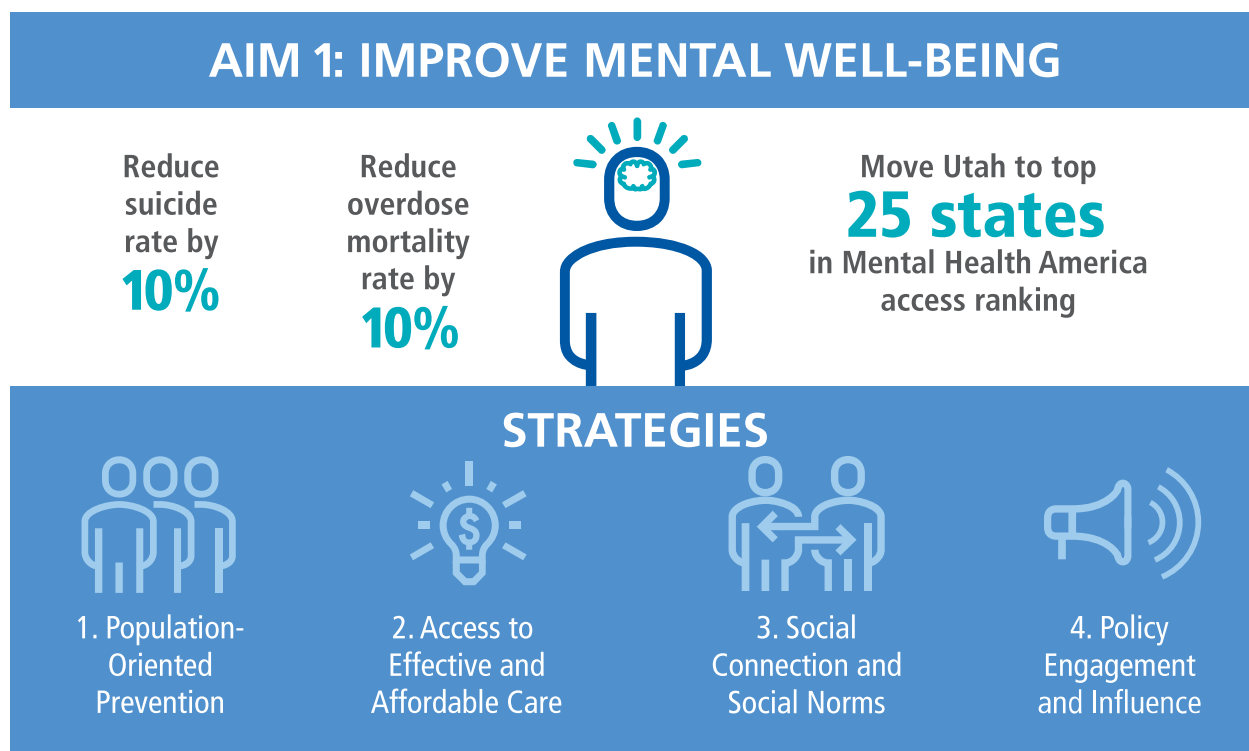

Intermountain created several logic models to illustrate what we plan to do, why we do it, what we hope to achieve, and how we will measure success. The logic model below summarizes the CHNA and CHIS with the priorities from this 2022 assessment.

Collaborating to Deliver on Our Mission

IMPACT EVALUATION OF PREVIOUS CHNA

In the prior CHNA published in 2019, we identified these health priorities: Improve Mental Well-Being, Prevent Avoidable Disease & Injury, and Improve Air Quality. While the COVID-19 pandemic caused disruptions and delays to some of this work, many achievements were still made.

Collaborating to improve access to behavioral health, supporting positive messaging around mental well-being and increasing protective behaviors have all been key to supporting our aim to improve mental well-being. We are proud to have collaborated with and offered philanthropic support to several of our public health and community-based organizations to offer counseling and treatment to uninsured and underinsured community members. We have also focused on ensuring access to behavioral health services to our underrepresented communities through numerous community partnerships to offer linguistically appropriate and culturally relevant care.

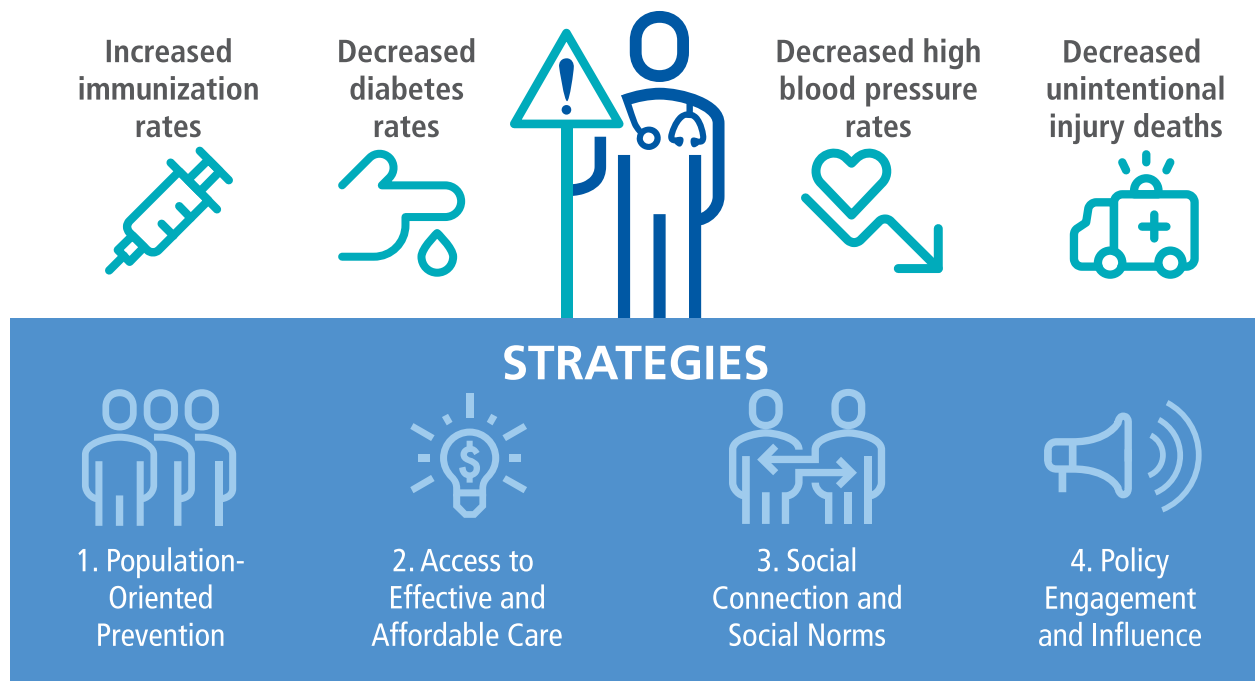

Behavioral Health Network

The Behavioral Health Network (BHN) provides funding and support to nonprofit providers to increase behavioral health access for Utah's most vulnerable populations. The BHN provides timely and affordable (no cost or low cost) treatment for behavioral health, substance use disorder, and medication management to uninsured and underinsured community members. The BHN has grown to include 24 organizations across Utah and Southwest Idaho, covering twenty-four Intermountain hospital service areas. From 2020 to the end of 2022, the program served 26,000 people.

Results

- Reduced high-dose opioid prescriptions by 48%
- Distributed 6,784 Naloxone kits
- Distributed 63,271 gunlocks
- Trained 45,187 providers in suicide prevention
- Conducted more than 42,734 behavioral health visits for underinsured and uninsured community members

AIM 2: DECREASE AVOIDABLE DISEASE AND INJURY

Avoiding disease and injury is core to living a healthy life. Intermountain has made a significant impact to prevent disease and injury and drive towards more affordable care overall and helping our communities live their lives to the fullest. Prevention is the first step toward longer, healthier lives. Immunization, preventative screenings, and education are low-impact ways for everyone to improve their health before needing healthcare. For example, our Immunization Community Collaborative is a team of public health, community-based organizations, health systems, and health insurance companies striving to increase flu and human papillomavirus vaccination (HPV) rates. These efforts increase access to vaccines and provide educational materials.

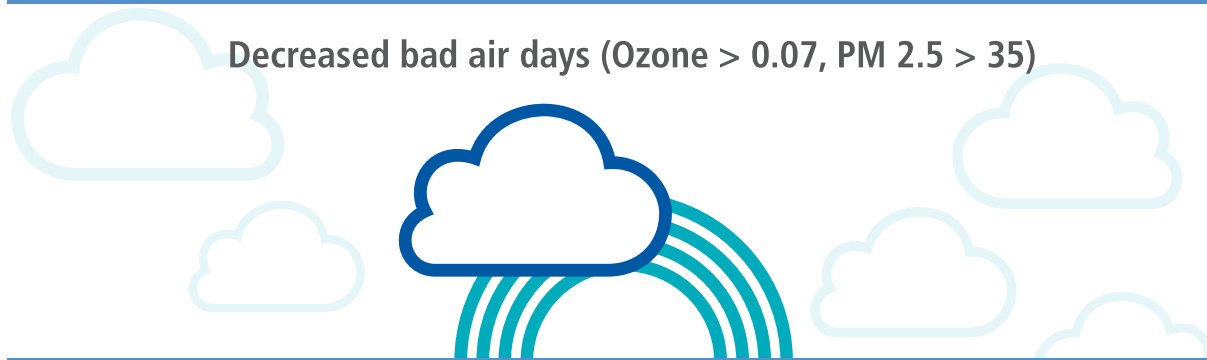

Intermountain supports people of all ages, from infancy to those who are more advanced in years. We have programs that support everyone to live their healthiest lives. Our children's health programming addressed the distinct needs of children and adolescents for injury prevention, mental health, substance use, and more, including timely issues like vaping and emotional well-being.

Results

- Increased flu vaccinations by 15.8%
- Increased HPV vaccinations by 7.8%
- Taught 143 chronic disease self-management classes with digital and Spanish language offerings
- Conducted in-person and virtual checks of more than 992 car seats
- Distributed nearly 17,436 safety devices including bike and ATV helmets, booster seats, and Safety Snaps to prevent hot car deaths
- 37% increase in visits to SeeThroughTheVape.org from innovative vaping prevention programs
- Trained 12 community members in CATCH My Breath (an evidence-based program to prevent Vaping) and implemented the program in a local school district

AIM 3: IMPROVE AIR QUALITY

Decreased bad air days (Ozone > 0.07, PM 2.5 > 35)

STRATEGIES

1. Population-Oriented Prevention

3. Social Connection and Social Norms

4. Policy Engagement and Influence

Improving air quality is a community health issue that emerged as a focus area during our previous CHNA. The air quality monitors in several Utah Counties indicated high amounts of particulate matter. Particulate matter can get deep inside the lungs, exacerbate respiratory infections, trigger asthma attacks and symptoms, and cause temporary reductions in lung capacity. As a result, air pollution increases rates of low birth weight, premature birth, infant mortality, and certain childhood cancers like leukemia. In addition, recent studies show increases in heart attacks, strokes, and high blood pressure due to air pollution.

Results

- Moved 22% of our system fleet vehicles to alternative fuel
- Partnered with Utah Clean Cities to collaborate on anti-idling signage to implement systemwide
- Created a new community partnership with the Utah Clean Air Partnership Program
- Installed idle free signage at 70% of our hospitals
- Installed electric charging stations at 65% of our core facilities
- Reduced our use of desflurane anesthetic gas by 63%, reducing our greenhouse gas impact
- Funded seven community air quality and sustainability projects
- Partnered with Airsset Technologies to install indoor air quality monitors

Driver: Addressing the Social Determinants of Health and Strengthening Community Infrastructure

In addition to our three core AIMs above, we also focused strongly on improving social determinants of health in our communities across all the AIMs. This included a focus on education; employment and financial stability; social inclusion and non-discrimination; affordable housing and basic utilities, including Internet access; and neighborhood and community characteristics, such as safety, transportation services, and the availability of nutritious food, clean water and air, and health services. Our main strategies included impact investing, local and diverse hiring, local sourcing, sustainable purchasing, environmental sustainability, and our investment in screening for and addressing individual social needs for every patient and member.

Our impact investments have focused on addressing the social determinants. Since 2019 we have invested more than \$50 million in local projects in housing stability, stabilizing employment and financial wellness.

In 2019, Intermountain launched a research demonstration project and community collaborative called the Alliance for Determinants of Health. Its purpose was to develop and evaluate a model for social care aimed at increasing the affordability, equity, and value of healthcare. It involved processes for identifying the social barriers to health experienced by SelectHealth Medicaid members in two counties and aligning with community resources to aid those in need. Notable community resources funded by the Alliance included dedicated community health workers with funds they could use to help with short term critical needs, the development of a social care provider network supported by a digital, closed-loop referral platform, and collaborations with community-based medical and behavioral health services.

Cumulative Alliance Results from 2019-2021

- 20,697 total social need screenings completed
- 1,811 total Community Health Worker cases
- 31.6% Community Health Worker clients who completed their program goals
- 34.2% Decrease in nonemergent use of the Emergency Department among SelectHealth Medicaid members living in Weber and Washington County from 2018 baseline * Multiple factors, some tied to COVID-19, led to the reduction

The processes, relationships, and community infrastructure that resulted from the Alliance provided the foundation for the expansion of social care into new geographies and through new initiatives. For example, the social care provider network and referral platform that started with around 20 community partners in two counties will include several hundred partners that cover the state of Utah by the end of 2022. Processes to screen patients that started in a handful of clinics have been scaled across all Intermountain Medical Group primary care clinics in Utah. We moved screening upstream from the point of care using social risk analytics to predict members who may need assistance and deploying social care coordinators to follow up telephonically.

Initially, this use of social risk prediction and proactive outreach is being used to address food insecurity with Medicaid in four counties but will expand to include Medicaid and Medicare members in additional areas. Finally, several primary care and women's health clinics in the Intermountain Medical Group participated in a pilot to adopt screening and assistance workflows for patients experiencing or who are at risk for experiencing intimate partner violence. Thus far, over 40 providers and their office staff across 15 clinics have been trained on how to screen and assist patients experiencing IPV and have screened over 4,000 patients.

Driver: Access to Healthcare Services

Our CHNA identified “access to healthcare” among the top needs in the community health needs assessment. We support this community need by providing access to healthcare services for low income and uninsured populations in the communities we serve, often in collaboration with our partners and programs listed below.

The Equitable Health Insurance Committee

The committee was created in 2021 to develop, lead, and sustain efforts to improve health insurance coverage for underrepresented people and communities across Utah. The support of multiple community leaders and stakeholders from government, non-for-profit organizations, insurance companies and other key leaders has been leveraged to achieve the following committee objectives:

- Develop the structure, scope, and measures of the Equitable Health Insurance Coverage Committee
- Support collaboration across health systems, health plans, tribal government, public entities, and community-based organizations to improve Medicaid/CHIP, and marketplace coverage
- Support public messaging around coverage options and enrollment safety
- Bring data, subject-matter, and consumer expertise to help guide the work

Through the efforts of this collaborative we have been able to increase support of enrollment efforts across organizations and provide information on open enrollment in various languages and in different media sources. Also, to further support state efforts we support the One Utah Collaboration at the governor’s office with high-level leadership and have been able to influence the insurance conversation within that area. In other policy-related work, the committee supports the legislative efforts in the state to provide coverage for all children.

Voucher Program

We have agreements with 59 non-Intermountain clinics and sites serving people living below 200% of federal poverty guidelines to provide vouchers for diagnostic imaging, lab tests, and specialty care services. Between 2020 and the end of 2022, we provided more than 53,980 vouchers to patients of these clinics to obtain diagnostic and specialty care services in our Intermountain facilities and hospitals.

Community Clinics and School Clinics

We own and operate three community and school clinics located in geographic areas with limited or no other healthcare providers; we charge fees on a sliding scale based on federal poverty guidelines. We also provide funding to clinics that we do not own but provide care to our underrepresented communities. Between 2020 and the end of 2022, we provided more than \$11.7 million in funding to community and school clinics.

Driver: Adverse Childhood Experiences (ACES)

We identified Adverse Childhood Experiences (ACEs) as a driver of our Intermountain prioritized health needs. ACEs are potentially traumatic events that occur in childhood. According to the Centers for Disease Control, studies show that ACEs have a tremendous impact on lifelong health and well-being.

Examples of our pilots and programs to prevent ACEs

Intimate Partner Violence (IPV) Screening

According to Utah’s Social Services Appropriations Committee, since 2000, 42% of Utah’s homicides are domestic violence-related. More than 80 Utah children witness their mother’s murder or attempted murder by an intimate partner every year. IPV significantly impacts families and their long-term health and well-being and is a focus area for community health. We created a pilot intimate partner violence screening

program in women's health and internal medicine clinics in response to this significant community need. Providers receive education about the importance of screening, best practice guidelines for screening developed with local and national advocates, and referral pathways for individuals that screen positive. We focus on providing screening in a private environment and securing results within the patient's medical record to remain confidential.

Nurse-Family Partnerships

We have partnered with community nonprofits to fund and support Nurse-Family Partnerships (NFP) in Weber County. NFP is the gold standard of maternal home visitation programs for high-risk, first-time mothers. And we have committed to secure ongoing funding for this program through private-public collaboration.. We are also working with local home visitation providers in Weber County to streamline the referral process and increase access for expectant mothers to the various home visitation programs are currently operating.

ACEs Public Education Campaign

We recognize the need for public education around ACEs and resiliency topics to the general public. We are developing a statewide strategy to support an ACEs public education campaign tailored to different audiences through relationships with community groups.

ACEs Community Collaborative

Community Health works with local providers in Washington County to educate and provide technical assistance around screening for ACEs in early childhood. We are also committed to building provider capacity in rural areas by training local mental health therapists in trauma-focused treatment modalities so that children can access appropriate treatment for their behavioral health needs close to home. Finally, we are committed to building a network of local advocates, schools, medical providers, and local mental health authorities to move work around ACEs forward on a local level.

Driver: Influencing Internal and Public Policy

The Intermountain Healthcare Policy Council was established in May 2021. The Council meets quarterly to discuss specific public policy topics and how Intermountain should approach each item. The 2023 Policy Plan reflects their agreed upon approach to address policies related to our Aims and Drivers. In 2021 we also created a financial assistance policy review committee, which resulted in internal policy changes for influenza and HPV vaccines being given without application. These significantly reduced barriers to care for our uninsured and underinsured community members.

Community Giving

Our organization provides charitable contributions, including donations and grants, to nonprofit agencies that align with identified community health aims and drivers as determined in the Community Health Needs Assessment. We award funding from Intermountain Healthcare Community Giving and the Intermountain Community Care Foundation. From 2020 to the end of 2022, we allocated more than \$141 million to more than 300 organizations.

CONCLUSION

We are grateful for the support of community members and agencies for their participation in this process of understanding local community health needs and developing strategies to improve health. Intermountain Healthcare will publish its next CHNA in 2025 and looks forward to continuing collaborations to improve the health of our community.

The Intermountain Healthcare CHNA was completed by Intermountain Community Health and Strategic Research Departments with expert guidance from the Utah CHNA Collaboration.

ACKNOWLEDGMENT

This assessment would not be possible without the Utah Department of Health & Human Services Division of Data, Systems, and Evaluation. Their talented team of data specialists helped Intermountain identify reliable public health measures that best illustrate the health of a community. Their dedication to the quality of the data and its dissemination helped make this assessment a true community collaboration. Contributors from the Utah Department of Health & Human Services Division of Data, Systems, and Evaluation included Anna Dillingham, Vangie Lund, and Tong Zheng. Intermountain is also grateful for Anna Dillingham's continued leadership of the Utah CHNA Collaboration, which is co-chaired with Stephanie Stokes.

For more information about the CHNA, contact:

Mikelle Moore, Chief Community Health Officer and Senior Vice President, mikelle.moore@imail.org

Stephanie Croasdell Stokes, Senior Consultant, Strategic Research, stephanie.stokes@imail.org

APPENDIX B

The table below shows the definition of each hospital community by zip code and the Utah Department of Health & Human Services Small Areas. Each Small Area includes medically underserved, low-income, and minority populations. The Utah Department of Health & Human Services created Small Areas in order to facilitate reporting data at the community level. Small Areas are determined based on specific criteria, including population size, political boundaries of cities and towns, and economic similarity, and were reviewed and approved by public health experts. These zip codes and associated Small Areas were used to assemble available data for health indicators.

*Primary Children's Hospital defines its community as the entire geographic state of Utah, including the medically underserved, low-income, and minority populations that live within the state.

*Cassia Regional Hospital defines its community using zip codes that align with local public health efforts and County Health Rankings & Roadmaps. The hospital community includes underrepresented, medically underserved, low-income, and minority populations. These zip codes were used to assemble available data for health indicators:

83311 Albion	83312 Almo	83318 Burley
83323 Delco	83336 Heyburn	83342 Malta
83343 Minidoka	83346 Oakley	83347 Paul
83350 Rupert		

*Southern Nevada community defines its community to include Clark & Nye county.

APPENDIX C

The table below lists the health indicators reviewed for the 2022 CHNA:

Age	Vegetable Consumption	Access to MH providers
Sex	Fruit Consumption	Access to Dental Health providers
Race	Arthritis	Provider per population/Physician Supply
Ethnicity	Alzheimer's Disease	Mammogram
Population Counts	Pertussis	Cholesterol checked
Persons living in poverty	Influenza-associated hospitalization	Colon cancer screening
Child poverty	Hepatitis B, chronic	Influenza vaccination
Food Insecurity	Hepatitis B, acute	Pneumococcal vaccinations
Housing Cost Burden	Hepatitis A	Childhood vaccination
Income	Tetanus	HPV immunization
Education	Diphtheria	Sun Safety
Households headed by a single female	Varicella (chickenpox)	HIV Testing
Lack of Social and Emotional Support	Chlamydia	Infant Mortality
Air Quality	Gonorrhea	Fetal Deaths
Water Quality	HIV	No Prenatal Care until 3rd Trimester
Food Deserts/Low Food Access	Syphilis, all stages	Multivitamin use before pregnancy
Modified Food Retail Environment Index	Hepatitis C, chronic	Preterm Births
Housing - Overcrowded or Substandard Housing	Hepatitis C, acute	Low Birth Weight
Recreation and Fitness Facility Access	West Nile virus, total	Gestational diabetes
Safety - crime rates	Tuberculosis, active	Obese BMI prior to pregnancy
Walk and Bike Friendly	Campylobacter	Excessive Gestational Weight Gain
Transportation use	Shiga toxin-producing E.coli	Alcohol use during Pregnancy
Occupational Fatalities	Salmonellosis	Smoking during the third trimester of pregnancy
General Health Status	Giardiasis	Breastfeeding
Life expectancy	Cryptosporidiosis	Births from Unintended Pregnancy
Mortality/leading causes of death	Hospital Associated Infections	Duration between Pregnancies
Disability/Activity limitation	Rabies, animal	Births to Women under 18
Uncontrolled Asthma	Mental Health Status	Developmental Screening
COPD	Suicide	ACES
All Cancer Deaths	Frequent mental distress	Autism
Breast Cancer	Attempted Suicide (minor)	Seatbelt use
Colon Cancer	Depression	Helmet Use (minor)
Lung Cancer	Prescription Drug Misuse & deaths	Unintentional Injury Deaths
Skin Cancer	Opioid Specifically	Falls
High Blood Pressure	Cigarette Smoking	Motor vehicle traffic crashes
High Cholesterol	Vaping	Firearm
Coronary Heart Disease	Binge Drinking	Drowning
Heart Failure	Chronic Drinking	Poisoning
Stroke	Illicit Substance Use (minor)	Burn (minor)
Pre-Diabetes	No Health Insurance Coverage	Fire deaths
Diabetes	Cost as a Barrier to Care in Past Year	Sexual Assault (Rape)
Overweight	At Least One Primary Provider	Violent Crimes
Obesity	Non-emergent ED Use	
Recommended Physical Activity	Last Dental Visit 1 year ago or more	

APPENDIX D

Pre-survey questionnaire that was sent to community members prior to scheduled input meetings

Q1 What organization do you represent?

Q2 Below is a list of health-related issues identified in previous assessments. Today, what would you say are the most significant health issues for your community? Drag and drop to rank your answers, with the most significant issue at the top.

Q3 What is different or unique about understanding and addressing [top issue identified] today, compared to three years ago when we last did this assessment?

Q4 What barriers continue to get in the way of preventing or solving this health issue?

Q5 Think specifically about aging and senior adults in your community. How would you rank the most significant health issues for aging and senior adults differently, if at all?

Q6 What other health issues, if any, should we be considerate of for aging or senior adults in our community?

Q7 Think specifically about children (individuals 0-17) in your community. How would you rank the most significant health issues for children differently, if at all?

Q8 What other health issues, if any, should we be considerate of for children in our community?

Q9 Think specifically about racial and ethnic minority groups in your community. How would you rank the most significant health issues for these underrepresented populations differently, if at all?

Q10 What other health issues, if any, should we be considerate of for racial and ethnic minority groups in our community?

Q11 Below is a list of community factors that drive health. Which do you feel your community does well, or you would consider a strength of your community? Select all that apply.

Q12 What other strengths or assets does your community have that can be used to improve health? What is missing, if anything?

APPENDIX E
