

# Spina Bifida Clinical Roadmap

\*Please note, these are guidelines. Additional consultations available as requested/needed by Family or Physician

\*\* Clinic consultation 2 weeks after discharge from the initial hospitalization, with follow up prior to 3 months individually arranged. \*\*

## \*STUDY KEY\*

### Urologic Study

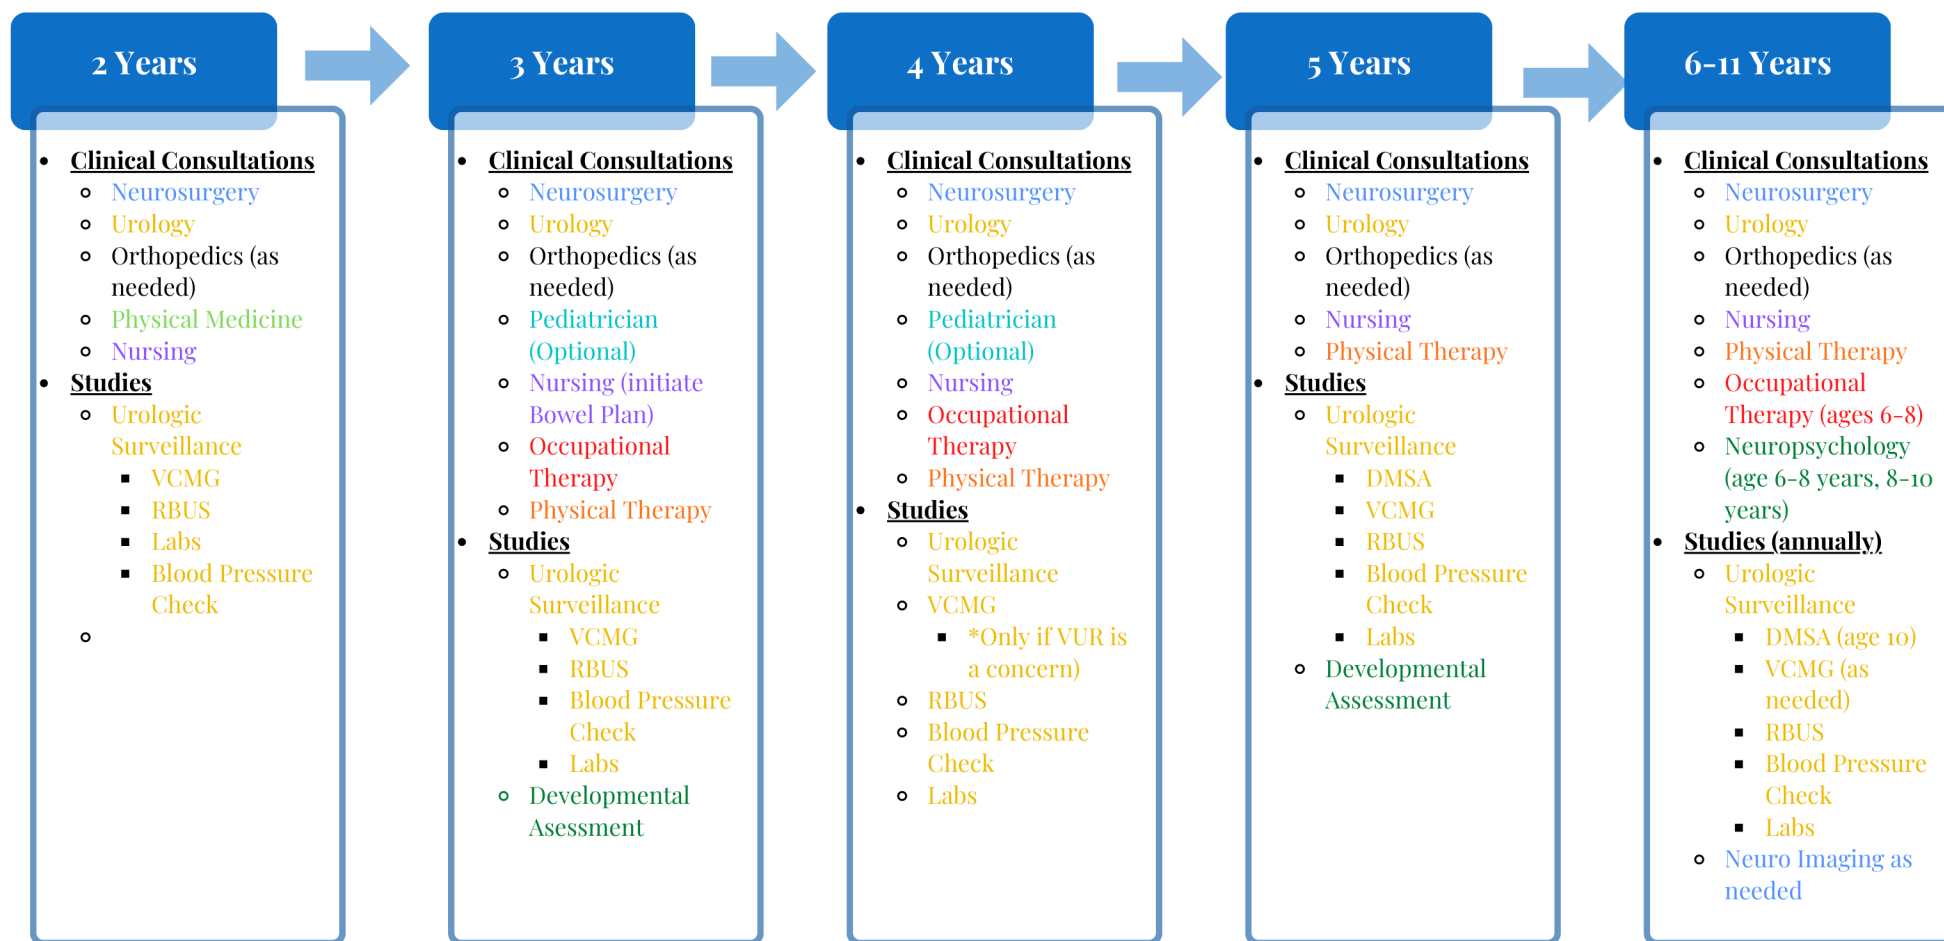

- DMSA** (Dimercapto Succinic Acid): Provides detailed pictures of the kidneys
- VCMG** (Video Cystometrogram): Detects high pressure in the bladder than may backwash into the kidneys and lead to kidney damage
- RBUS** (Renal Bladder Ultrasound): Follows kidney and bladder growth and health
- Labs**: Renal Function Panel (RFP), Cystatin C

### Neurological Studies

- HUS** (Head Ultrasound): Monitors patients for Hydrocephalus
- MRI** (Magnetic Resonance Imaging): Provides a clear 2-D Picture of the brain, cervical canal, or spine

# Spina Bifida Clinical Roadmap
