

BE SMART RIDING ATVS

There are a lot of fun outdoor activities to do with family and friends, like riding ATVs. However, a child's risk of being hospitalized from riding an off-highway vehicle is a thousand times greater than riding in a car. ATV safety is very important.

- Make sure everyone is wearing protective gear. This includes a helmet, goggles, long sleeves, sturdy pants, gloves, and over-the-ankle boots.

- Every rider should be certified, but it's the law for children under 16 years old or without a drivers license. This can be done online at offroad-ed.com/utah or at an off-highway vehicle retailer.
- Be responsible. Do your best to keep everyone safe. This means sticking to the right number of riders, age, and size for the vehicle.
- Don't ride beyond your skill level. And stay off of paved roads.
