

## RIDING THE RIGHT ATV

Riding on the right size of ATV will help keep you and others safe. Stick to the right number of riders per ATV and don't ride beyond your skill level.

### Guidelines for the proper fit on an ATV:

- **Brake Reach:** When your hand is placed in the normal operating position with fingers extended straight out, does the first joint from the tip of the middle finger reach beyond the brake lever?
- **Leg Length:** Sit on the ATV with feet placed on the pegs. Do your knees bend at least 45 degrees? Are your thighs almost parallel to the footrests?
- **Grip Reach:** Sit upright on the ATV and place your hands on the handlebars, not leaning forward. Is there a distinct angle between the upper arm and the forearm?
- **Turning Reach:** Are you able to turn the handlebars from lock to lock while maintaining grip on the handlebars and controlling the throttle and brake?

If the answer is "No" to **any** of these questions, you do not fit the ATV and should not drive it. If you answered "Yes" to all of these questions then the ATV is a good fit.

Brake Reach	Leg Length and Grip Reach	Turning Reach
