Garfield Memorial Hospital

Garfield Memorial Hospital is owned by Garfield County and is managed by Intermountain Healthcare. Located in rural Panguitch, Utah, Garfield Memorial Hospital has 14 staffed beds and a broad spectrum of inpatient and outpatient medical services. It is the only hospital in Garfield County. Although it is not owned by Intermountain, in 2019, they participated in a community health needs assessment to understand how to help people live the healthiest lives possible. This hospital participated in a collaborative, system approach to identify health indicators, gather community input, and determine the significant health needs to address over the next few years. Garfield Memorial Hospital identified the significant health needs as:

- Improve Mental Well-Being, Prevent Avoidable Disease & Injury, and Improve Air Quality
- Improve the quality of care
- Increase access to care
- Improve health outcomes

What we heard from the community

Garfield Memorial Hospital co-hosted a community input meeting with the Utah Department of Health and its local public health department. This meeting included representatives from: food pantries, health advocate groups, healthcare providers (including FQHCs), human service agencies, law enforcement, local business, local government, low-income, uninsured, underserved populations, behavioral health service providers and local mental health authorities, minority organizations, safety net clinics, school districts/higher academic institutions, state and local health departments. Highlights from this community input meeting include:

- Increasing chronic diseases associated with unhealthy weight and behaviors are resulting from non-compliance of medications and treatment plans, convenience of unhealthy food, and affordable specialists who can help individuals manage their care.
- Mental health and suicide are life-span issues.
- There is a lack of training and education in the community regarding crisis response and the use of naloxone.
- There are no urgent care facilities in the community.
- Social determinants of health, especially unaffordable housing and utilities, contribute to poor health.

What we know about the health needs

Below are health indicators that present the most opportunity to improve health in this community:

<table>
<thead>
<tr>
<th></th>
<th>Garfield</th>
<th>State of Utah</th>
</tr>
</thead>
<tbody>
<tr>
<td>Frequent mental distress</td>
<td>12.3%</td>
<td>17.5%</td>
</tr>
<tr>
<td>Depression</td>
<td>14.4%</td>
<td>21.6%</td>
</tr>
<tr>
<td>Suicide death rate</td>
<td>36.6 per 100,000</td>
<td>22.0 per 100,000</td>
</tr>
<tr>
<td>Drug poisoning death rate</td>
<td>21.6 per 100,000</td>
<td>22.4 per 100,000</td>
</tr>
<tr>
<td>Childhood immunizations</td>
<td>NA</td>
<td>67.9%</td>
</tr>
<tr>
<td>Diabetes</td>
<td>7.6%</td>
<td>7.7%</td>

Why are these health issues important?

- According to the Centers for Disease Control and Prevention (CDC), chronic conditions related to obesity, such as diabetes and poor cardiovascular health, continue to be the leading cause of death and disability in the United States. The community this hospital serves is no exception.
- Mental health disorders are medical conditions that disrupt a person’s thinking, feeling, mood, ability to relate to others and daily functioning. Just like chronic diseases, mental health disorders are treatable, however, many cases often go unrecognized and untreated. There is a strong relationship between chronic disease, depression, and other mental health concerns.
- Suicide is the sixth leading cause of death in Utah.
- Drug poisoning deaths are a preventable public health problem; they are the leading cause of injury death in Utah, outpacing deaths due to firearms, falls, and motor vehicle crashes.
- Immunizations are one of the most cost-effective, safe, and effective health prevention measures and play an essential role in reducing and eliminating disease.
- Unintentional injuries and suicides have been the leading causes of child injury deaths in Utah.
- Air quality measures the amount of pollution in the air. Poor air quality is associated with several adverse health outcomes, including reproductive health issues, poor birth outcomes, and an increase risk of heart attacks, strokes, and high blood pressure.

How are we going to address these health needs?

Based on the results of the CHNA, Intermountain Healthcare engaged representatives of state and local health departments and multiple community partners to identify potential implementation plans. Partners who participated in the previous community input meeting were invited again to discuss strategies, in addition to representatives from community libraries and case managers. These planning efforts were used to develop a three-year plan outlining health improvement strategies for Garfield Memorial Hospital to address the significant health needs using evidence-based programs.

Garfield Memorial Hospital’s implementation plan leverages system and local resources to create partnerships that will improve health outcomes, with a particular focus on low-income, underserved, and uninsured populations. The implementation plan, which is reported in a separate document, includes a description of the resources Intermountain has committed to the strategies and how such resources will be augmented by collaborative partnerships in each hospital community. Outcome measures will be tracked and reported annually through the evaluation process.
