Summary

Intermountain Healthcare created a system-wide Community Health Needs Assessment (CHNA) process to be used by each of its hospitals to identify local area health needs and understand how to help people live the healthiest lives possible.

Intermountain Delta Community Hospital collaborated with the Central Utah Public Health Department and the Utah Department of Health to identify health indicators, gather data, analyze, and then prioritize those indicators to determine the significant health needs to address over the next several years. Health improvement activities to address the prioritized need are detailed in a separate implementation plan.

As a result of this extensive needs assessment and prioritization process, described in the following pages, Delta Community Hospital and Intermountain identified the priority health need as:

**Prevention of prediabetes, high blood pressure, depression, and prescription opioid misuse**

This report focuses on the adult health needs of the Delta Community Hospital community. Child and adolescent health needs are reported in the Intermountain Primary Children’s Hospital CHNA Report. Primary Children’s is the pediatric specialty and referral hospital for the state of Utah.

The 2016 CHNA report informs Intermountain leadership, public health partners, and community stakeholders of the significant health needs in our community, allowing hospitals and their local partners to develop strategies that leverage Intermountain and community resources to address those needs throughout the Intermountain system.

The Patient Protection and Affordable Care Act (ACA) requires each not-for-profit hospital to conduct a CHNA every three years and to develop an implementation strategy to address, measure, and report impact of significant health priorities.

This report fulfills the ACA reporting requirement to make results of the CHNA publicly available. This report has been reviewed and approved by the Delta and Fillmore Community Hospitals Governing Board.

Delta Community Hospital is one of Intermountain’s 22 hospitals located in Utah and southeastern Idaho. Intermountain’s system-wide process for conducting the CHNA for each hospital community includes:

- Asking for broad community input regarding local health needs including needs of medically underserved and low-income populations
- Analyzing and prioritizing health indicators to identify significant needs
- Making the CHNA results publicly available

---

1 Intermountain owns and operates 21 hospitals in Utah and southeastern Idaho and manages Garfield Memorial Hospital, owned by Garfield County, in Panguitch, Utah. Intermountain included Garfield Memorial Hospital in its system-wide CHNA. For purposes of this report, reference will be made to 22 hospitals to include this hospital.
Intermountain hospital leaders, Community Benefit, and Strategic Planning and Research staff members conducted community input meetings that were co-hosted by each hospital, the local health department, and the Utah Department of Health. Invitees represented the broad interests of the residents, including the healthcare needs of medically underserved and low-income populations. Participants included minority, low-income, and uninsured populations, safety net clinic employees, school representatives, health advocates, mental health providers, local government leaders, senior service providers, and others.

Intermountain collaborated with local health departments, the Utah Department of Health, and internal clinical and operational leadership to identify 100 health indicators representing 16 broad health issues. The indicators form the core of public health data that Intermountain, local health departments, and the Utah Department of Health used/will use for each of their own needs assessments. The Utah Department of Health Office of Public Health Assessment assembled the 100 health indicator data for each of Intermountain’s 22 hospital communities.

Intermountain developed a process to prioritize significant health needs. Representatives from local health departments, the Utah Department of Health, Intermountain hospitals and governing boards, and clinical and operational leadership, were invited to participate in the prioritization process. Participants reviewed summaries of community input meetings and health indicator data and completed a survey to quantify the relative priority of the 16 broad health issues.

The priority health need: the prevention of prediabetes, high blood pressure, depression, and prescription opioid misuse; reflects results of the prioritization process that revealed preventive services, overweight and obesity, diabetes conditions, cardiovascular conditions, mental health issues, and addictive behaviors as the top health issues. Selecting a single, specific health issue as the identified need provides clarity and guidance for implementation strategies.

Results of the CHNA were used to develop a three-year implementation strategy for Delta Community Hospital to address the significant health need using evidence-based programs. Outcome measures for the implementation strategy will be defined and tracked quarterly over three years; impact of the strategy will be reported annually.
Community Health Needs Assessment Background

Delta Community Hospital’s first CHNA was part of Intermountain’s 2009 comprehensive assessment to identify significant community health needs, especially for low-income residents in Utah and southeastern Idaho communities. From data review and consultation with not-for-profit and government partners, Intermountain identified these health priorities:

- Chronic disease associated with weight and unhealthy behaviors
- Access to healthcare for low-income populations
- Access to behavioral health services for low-income populations

Intermountain addressed these priorities to improve healthcare for low-income populations, reduce the cost of healthcare for Intermountain and the community, and focused on the healthcare needs of each community where its hospitals are located. The health priorities aligned with Healthy People 2010 goals (a national program to attain high-quality, longer lives free of preventable disease, disability, injury, and premature death) and Intermountain clinical goals. The 2009 CHNA guided Intermountain’s community health improvement efforts and the community health goals of its hospitals, clinics, and programs.

The Patient Protection and Affordable Care Act (ACA) requires that each not-for-profit hospital solicit input from people representing the broad interests of the community, gather quantitative data, identify and prioritize significant health needs, create strategies to address the needs, make the CHNA results public, and report on the IRS Form 990 Schedule H. Intermountain conducted another CHNA in 2013; identified the same three health priorities from the 2009 assessment and added a fourth on childhood accident and injury prevention.

New requirements, effective January 1, 2016 from the Department of the Treasury, guided the 2016 CHNA process design. Intermountain’s Community Benefit and Strategic Planning and Research Departments created a system-wide process for each of its hospitals in conducting components of the CHNA and creating plans to address the significant need by:

- Soliciting community input regarding local health needs
- Collecting quantitative data on health indicators
- Prioritizing health indicators to identify significant needs
- Making the CHNA results publicly available
- Developing an implementation strategy to address the significant priority
- Making the implementation plan publicly available
Defining the Delta Community Hospital Community

Delta Community Hospital is one of 22 Intermountain Healthcare hospitals in Utah and southeastern Idaho. Located in the rural community of Delta in central Utah, Delta Community Hospital, a Critical Access Hospital has 18 staffed beds and offers a broad spectrum of inpatient and outpatient medical services. In 2015, the hospital provided more than $790 thousand\(^2\) in financial assistance to patients in over 996 cases.

The Delta Community Hospital community was defined by the zip codes in which a majority of inpatient discharges reside. The hospital community includes medically underserved, low-income, and minority populations. These zip codes were used to assemble available data for health indicators:

84624 Delta  
84640 Lynndyl  
84635 Hinckley  
84649 Oak City  
84638 Leamington  
84728 Garrison

In 2014, approximately 22.7 percent of the population was uninsured in the Delta Community Hospital community (defined by zip codes).\(^4\)

---

\(^2\) Total gross charges; the total adjusted charity care based on standard established by the Utah State Tax Commission is approximately $544 thousand.

2016 Community Health Needs Assessment

CHNA Process Planning, Governance, and Collaboration

Intermountain’s mission of helping people live the healthiest lives possible® is best realized with a comprehensive understanding of the health needs of the community served by its hospitals, clinics, and health plans. Intermountain is committed to routinely assessing the community’s health needs through a comprehensive assessment process that both engages members of the community and analyzes the most current health status information. Intermountain uses the assessment to inform its system-wide and local strategies to improve community health.

Several committees within Intermountain guided the assessment and implementation planning process. This engagement led to a commitment from leaders to apply the assessment results in a three-year cycle to create health improvement strategies in the communities where our facilities are located.

- The Community Health Improvement Guidance Council, established in early 2014, provides strategic direction for Intermountain’s Community Health Improvement activities, including the development of the 2016 CHNA and Implementation Strategy Planning process. The Council includes executive leadership from Population Health, Strategic Planning, SelectHealth, (Intermountain’s insurance company), Clinical Operations, Medical Group Operations, Legal, Tax, Finance, Communications, and Community Benefit to facilitate alignment with Intermountain strategy and ensure compliance with relevant tax and regulatory requirements. The Council established Guiding Principles for Community Health Improvement during 2014 which guided the development of the 2016 CHNA and Implementation Strategy Process.

- The Community Benefit Steering Committee provides tactical leadership to integrate the CHNA, implementation strategies, and other health improvement initiatives within the Intermountain system while supporting collaborative work with public health departments and other stakeholders. The Steering Committee includes senior leaders for hospital operations, Integrated Care Management, Strategic Planning and Research, Population Health, Behavioral Health, Communications, Medical Group, SelectHealth, and regional Community Benefit.

- The CHNA Executive Committee coordinated the subcommittees and managed the hand-off of each stage in the process through final public reporting. Subcommittees included: Communications, Data Collection, Health Need Prioritization, Evaluation, and Implementation Planning.

- Community Benefit Managers representing geographic areas of Intermountain’s service area coordinated local hospital activities including planning and identifying community members with whom to solicit input, convening meetings to report on the CHNA results, exploring potential collaborations, and planning strategies with local health departments and agencies to address the significant health need. Long-term and emerging relationships with community partners and local hospital Community Benefit staffs have led to opportunities for collaborative strategies to address health needs.

- The Community Advisory Panel was convened to provide public health expertise and community guidance to Intermountain in its CHNA and to formalize collaborative partnerships with the local health departments where Intermountain facilities are located. The role of the panel included providing recommendations on designing the collaborative assessment that met Intermountain and public health departments’ needs; identifying the health indicators; co-hosting community input meetings; reviewing data results; providing input to prioritize needs; and participating in planning strategies to address the significant health need.
Success of the collaborative CHNA with local and state health departments has resulted in the panel members committing to expand the membership to share information, leverage resources, and measure and evaluate community health improvement strategies together for the benefit of people throughout our service areas. Membership on the Community Advisory Panel includes:

- Leadership from the Association for Utah Community Health (Federally Qualified Health Centers)
- Representatives from HealthInsight (Utah’s designated quality improvement organization and quality innovation network)
- Leadership from Utah’s public behavioral health system, Davis Behavioral Health, Southwest Behavioral Health Center, Utah Division of Substance Abuse and Mental Health, Wasatch Mental Health, and Weber Human Services
- Executive directors from the following health departments: Davis County Health Department, Central Utah Public Health Department, Salt Lake County Health Department, Summit County Health Department, Utah County Health Department, Utah Department of Health, Wasatch County Health Department, and Weber-Morgan Health Department
- Representatives of Intermountain Community Benefit Department, Strategic Planning and Research Department, and Medical Group Clinics

CHNA Methodology
Following the Intermountain system-wide approach, Delta Community Hospital conducted its 2016 CHNA by:

- Asking for broad community input regarding local health needs including needs of medically underserved and low-income populations
- Gathering quantitative data collection on health indicators
- Reviewing Area Deprivation Index maps
- Analysis and prioritization of health needs indicators to identify significant needs
- Making the CHNA results publicly available

Community Input
Delta Community Hospital, Central Utah Public Health Department, and the Utah Department of Health co-hosted the community input meeting. Invitees included representatives of the following groups:

- Food pantries
- Health advocate groups
- Healthcare providers
- Human service agencies
- Law enforcement
- Local business
- Local government
- Low-income, uninsured, underserved populations
- Mental health service provider
- Minority organizations
- Safety net clinics
- School districts
- State and local health departments

These participants, representing a broad range of interests, including the healthcare needs of uninsured and low-income people, were invited to attend the meeting to share their perspectives on health needs in the hospital’s community. Staff from Intermountain facilitated the meeting on June 24, 2015 which was manually and digitally recorded and transcribed.
Discussion highlighted specific issues in the community, concrete examples of challenges, perceptions, and strategies for addressing health needs. An online survey was sent to people who could not attend the community input meeting to encourage more representative feedback and engage all who were invited. Not all the people who received the surveys responded to the request. Representatives from the following organizations were included:

- Central Utah Counseling Center
- Central Utah Food Sharing, Delta
- Central Utah Public Health Department
- Delta Community Church
- Delta Mayor
- Head Start - Fillmore
- Intermountain Delta Community Hospital
- Intermountain Fillmore Community Hospital
- Intermountain Healthcare
- Materion (major employer)
- Millard County Ambulance
- Millard School District
- Private Behavioral Health Provider/advocate
- Utah Department of Health

Health Indicators
The selection of reliable, meaningful health indicators was an important part of the 2016 CHNA. First, Intermountain created an inventory of health indicators used in the 2009 and 2013 assessments and compared those indicators with published needs assessments and/or annual reports from the Utah Department of Health and local health departments. Second, an extensive literature review of national reporting metrics, particularly those used by Healthy People 2020, also contributed indicators to the inventory. Third, the staff conducted interviews with epidemiologists at the Utah Department of Health and local health departments to identify additional indicators important to their own needs assessments and specific measures for each with good reliability and availability. The Community Advisory Panel reviewed the list and provided final recommendations.

Next, the 100 indicators were grouped into 16 different broad health issues to simplify and organize discussions of data. The groupings were based on recommendations from the Institute of Medicine and Healthy People 2020. Finally, the completed list of 100 indicators grouped by 16 broad health issues was presented to and approved by Intermountain’s Community Benefit Steering Committee and Community Health Improvement Guidance Council for review and approval.

Intermountain collaborated with the Utah Department of Health Office of Public Health Assessment to assemble available data on health indicators for each hospital community. Analysts aggregated two or three years of data for each indicator to achieve a large enough sample size to have a reliable estimate for each health indicator. Appendix A contains data for each indicator for the Delta Community Hospital service area, the Intermountain service area, the state of Utah, and the United States.

Area Deprivation Index
Income, education, and other economic and social risk factors affect individual health and well-being. The Area Deprivation Index (ADI) is a validated, community socio-economic composite measure developed specifically for Utah by Intermountain. The ADI measures the distribution of socio-economic disadvantage within a community at the U.S. Census block group level. Higher socio-economic deprivation levels in communities (noted in orange and red on the map below) are often associated with poorer health and health delivery outcomes. While the ADI does not provide information on specific health needs in a community, it does provide context and information about segments of communities in which greater health disparities may be expected and where implementation strategies could be targeted.
Elements included in the Area Deprivation Index:

- Median family income (dollars)
- Income disparity
- Percent of families below poverty level
- Percent of population below 150 percent poverty threshold
- Percent of single parent households with dependents under age 18
- Percent of households without a motor vehicle
- Percent of households without a telephone
- Percent of housing units without complete plumbing
- Percent occupied housing units
- Percent of households with less than one person per room
- Median monthly mortgage (dollars)
- Median gross rent (dollars)
- Median home value (dollars)
- Percent of employed persons over age 16 with a white collar occupation
- Percent of unemployed civilian labor force over age 16
- Percent of population over age 25 with less than nine years of education
- Percent of population over age 25 with at least a high school education
Prioritization

Intermountain engaged its internal and external partners in a rigorous prioritization process to identify significant health needs in each hospital community. Prioritization involved identifying dimensions, determining the weight for each, inviting key stakeholders to evaluate the 16 broad health issues on those dimensions, and calculating scores to identify the significant health need.

Intermountain identified dimensions for prioritization using practices established by public health professionals.\(^8,^9,^{10,11,12}\) The dimensions reflect needs assessment best practices, ACA requirements, and Intermountain strategic goals.

Dimensions included:

- **Affordability**: the degree to which addressing this health issue can result in more affordable healthcare
- **Alignment**: the degree to which the health issue aligns with Intermountain Healthcare’s or stakeholder organization’s mission and strategic priorities
- **Community input**: the degree to which community input meetings highlighted it as a significant health issue
- **Feasibility**: the degree to which the health issue is feasible to change, taking into account resources, evidence-based interventions, and existing groups working on it
- **Health equity**: the degree to which the health issue disproportionately affects population subgroups
- **Seriousness**: the degree to which the health issue is associated with severe outcomes such as mortality and morbidity, severe disability, or significant pain and suffering
- **Size**: the number of people affected by the health issue
- **Upstream**: the degree to which the health issue is upstream from and a root cause of other health issues

Intermountain’s Community Benefit Steering Committee determined weights for each dimension through a survey process; committee members indicated the relative weight (out of 100 percent) that each dimension should carry. Scores were averaged across committee members to create the assigned weight for each dimension.

Final weights are shown in the chart.

\(^8\) Association for Community Health Improvement (2007). ACHI Community Health Assessment Toolkit. Available at http://www.assesstoolkit.org/assesstoolkit/member/Priorities/index.jsp

\(^12\) Duttweiler, M. 2007. Priority Setting Tools: Selected Background and Information and Techniques.
Intermountain identified more than 400 individuals to participate in the prioritization process for the system-wide step; a subset of the 400 completed the prioritization for Delta Community Hospital.

Participants included:

- Delta Community Hospital
  - Administrator/Chief Executive, Financial, Medical, Nursing, and Operations Officers
  - Strategic Planner
  - Community Benefit Manager
  - Communications Director
  - Governing Board
- Intermountain Healthcare
  - Region Vice President
  - Medical Group Chief Executive, Financial, Medical, Nursing, and Operations Officers
  - SelectHealth Chief Executive, Financial, Medical, and Operations Officers
- Local Health Department Officer
- State Health Department Leaders

Participants in the prioritization process for each hospital received the following materials to support their participation:

- An executive summary of the hospital’s community input meeting
- A summary of the 100 publicly reported health indicators for the hospital community
- An Area Deprivation Index (ADI) map of the hospital community

Four weeks after receiving the supporting information, participants received an invitation to complete an online survey to rate the 16 broad health issues on four dimensions (alignment, feasibility, seriousness, upstream) using a scale of low (1), medium (2), or high (3). Strategic Planning and Research staff assigned ratings for the remaining dimensions (affordability, community input, health equity, size) based on the following criteria:

- **Affordability**: reduction of costs associated with addressing the health issue being small (1), moderate (2), or large (3), provided by Intermountain’s Population Health Analytics team.
- **Community input**: not mentioned by the community as an issue (1); mentioned, but not a common theme (2); common theme mentioned by several community members (3).
- **Health equity**: calculated by creating a disparity score using race as the only indicator of disparity. The highest number in the race categories was subtracted from the lowest number, divided by the lowest number, and then multiplied by 100 to get a percentage (% disparity). $1 = 0-100\%$ disparity; $2 = 101-300\%$ disparity; $3 = >300\%$ disparity.
- **Size**: prevalence: $1 = 0 – 9\%$; $2 = 10 – 24\%$; $3 = \geq 25\%$; incidence: $1 = 0-49$ per 100k; $2 = 50-99$ per 100k; $3 = 100+$ per 100k. Scales reflect national metrics.
**CHNA Results**

**Summary of key issues and ideas from community input meeting:**

**Key Issues**
- Lack of education about and motivation for preventive care and healthy behaviors
- Safety concerns and lack of infrastructure to promote physical activity, especially for children and adolescents
- Connection of poverty to chronic diseases, ability to purchase healthy food and inadequate housing
- Prevalence of depression among all ages and other mental health conditions affecting children
- Substance use and lack of treatment facilities
- Prevalence of suicide

**Chronic diseases, weight, and unhealthy behaviors**
- Lack of motivation to exercise and eat healthy
- Prevalence of obesity
- Cost of healthy foods
- Insufficient resources/incomes to afford access to recreation and healthy food

**Access to healthcare**
- Lack of access to after-hours and weekend healthcare services; no urgent care facilities
- Lack of health insurance and low incomes results in inappropriate Emergency Department visits
- Cost of insurance and high deductible plans are barriers to accessing care
- Lack of health literacy; need for health navigators to educate about insurance and how to access services appropriately
- Lack of specialty providers in community

**Access to mental health**
- Lack of education and awareness of available mental health resources
- Lack of providers, including crisis centers; may lead to inappropriate Emergency Department visits
- Prevalence of substance use
- Prevalence of depression and anxiety
- Stigma associated with mental health issues
- Lack of treatment facilities (Delta community and surrounding area)
- Prevalence of teen suicide
- Need for education for parents on mental health issues and suicide prevention

**Children’s health**
- Lack of recreational space
- Low-incomes limit ability to participate in outdoor recreation
- Excessive screen time and use of electronic devices
- Concern about childhood safety
- Impact of poverty on childhood and adolescent health
- Lack of motivation for healthy eating; Women Infant and Children program isn’t used for healthy food choices
- Prevalence of obesity among children
Environmental influences on health

- Lack of access to high quality and affordable housing causing over-crowding, concerns about maintenance and cleanliness
- Prevalence of homelessness (especially among children), limited resources
- Stigma association with homelessness may discourage people from seeking help
- Impact of poverty on overall health and well-being
- Concern of under-reported sexual and domestic violence; perception of stigma which reduces people reaching out for support

Significant Community Health Need:
Delta Community Hospital and Intermountain reviewed community input and the final calculation of priority scores based on ratings across the eight dimensions and identified the priority health need as:

Prevention of prediabetes, high blood pressure, depression, and prescription opioid misuse
**Prioritized Health Indicator Data**

**Prevention of Prediabetes**

- Approximately one in 20 adults in the Intermountain Hospital communities reports a diagnosis of prediabetes. That prevalence rate is likely an underestimate, since the majority of adults affected by prediabetes are unaware of it.

### Prediabetes Rate

**Why We Are Focusing On Prediabetes**

The number of individuals undiagnosed with prediabetes is an estimated 86 million.\(^{14}\) Prediabetes is characterized as higher than usual blood sugar levels, though lower than the levels associated with type 2 diabetes.\(^{15}\) If left untreated, prediabetes will progress to type 2 diabetes.\(^{16}\)

Diabetes is a very costly condition, with approximately $245 billion spent annually in the U.S.; in Utah, more than a billion dollars each year are spent on direct and indirect costs associated with prediabetes and diabetes.\(^{17}\) Identifying people with prediabetes can create opportunity to prevent the development of type 2 diabetes, which is the leading cause of non-traumatic lower-extremity amputation, renal failure, blindness among adults younger than 75, and one of the leading causes of heart disease.\(^{18}\)

### Why We Are Focusing on High Blood Pressure

High blood pressure can be problematic because it is unlikely to result in obvious symptoms making it difficult to detect. Around 70 million American adults have high blood pressure, which is close to one out of every three adults.\(^1^9\) However, only 52 percent of these adults are successfully managing their condition.\(^2^0\) High blood pressure can also cause further complications through an increased risk of heart disease and stroke, which continue to be among the highest causes of mortality in the United States.\(^2^1\)

---

\(^{1^9}\) *High Blood Pressure*, Center for Disease Control and Prevention, U.S. Department of Health and Human Services, 2016

\(^{2^1}\) Ibid
Prevention of Depression

➤ Approximately one in five adults in the Delta Community Hospital community reports a diagnosis of depression. That prevalence rate is likely an underestimate, since many adults affected by depression do not seek diagnosis and treatment.

![Depression Rate](image)

➤ Depression rates vary with age. Adults under the age of 65 are more likely to be diagnosed with depression than those over 65.

![Depression Rate by Age](image)

➤ Depression rates vary by sex. Females are more likely to be diagnosed with depression than are males.

![Depression Rate by Sex](image)

NA = Data not available due to small sample size in community

Intermountain Delta Community Hospital 2016 Community Health Needs Assessment
Depression rates vary by race and ethnicity. Small sample sizes for some race and ethnicity groups in the Delta Community Hospital community make robust comparisons difficult. In the Intermountain hospital communities, depression rates are lowest among the Asian population and rates are often twice as high or more among other races. Depression rates are higher for non-Hispanic groups than for Hispanic groups.

![Depression Rate by Race/Ethnicity](image)

Depression rates vary across educational attainment. Depression rates are lowest among populations with an Associate’s Degree or higher.

![Depression Rate by Education](image)

Depression can lead to suicide attempts for some individuals. The suicide death rate in the Intermountain Hospital Communities is lower than the state rate, but remains above the national rate.

![Suicide Death Rate](image)

NA = Data not available due to small sample size in community
Poor mental health is a complicating factor linked to depression and the high school attempted suicide rate for the Intermountain hospital communities highlights that early prevention of depression is needed.

**Why We Are Focusing on Depression**

Mental health is an integral part of an individual’s well-being. Depression is a mood disorder that adversely affects one’s mental health through changes in how an individual thinks, feels, and behaves. It is the most common of mental disorders in adults. Symptoms revolve around emotions of persistent sadness, worthlessness, and thoughts of death or suicide, among many others.

---

22 National Institute of Mental Health, National Institutes of Health (NIH), U.S. Department of Health and Human Services, 2016
23 Depression, Public Health Indicator Based Information System (IBIS), Utah Department of Health, 2014
percent of adults in the U.S. are affected by depression; Utah is slightly higher with more than 20 percent. Depression is also more common in people with other health conditions, such as diabetes and heart disease, and can worsen outcomes in people with those conditions as well as contribute to a poorer overall quality of life.

Depression is a serious concern for children and adolescents as well, with 25.7 percent of adolescents reporting feeling sad or hopeless. In 2014, suicide was the leading cause of death for Utahns ages 10 to 17.

---

24 *Depression*, Public Health Indicator Based Information System (IBIS), Utah Department of Health, 2014  
25 National Institute of Mental Health, National Institutes of Health (NIH), U.S. Department of Health and Human Services, 2016

*Indicates there was a tie in the prioritization score between addictive behaviors and other health issues on this prioritization dimension.

Why We Are Focusing on Prescription Opioid Misuse
Substance abuse is a disorder in which drugs or alcohol are used in excess to the point that it becomes disruptive to a person’s daily life. 20.2 million Americans were suffering from a substance abuse disorder in 2014,<sup>29</sup> which includes prescription opioid abuse. Though prescription opioid abuse is increasingly a concern across the U.S., Utah is especially at risk for its consequences as the death rate here exceeds the national rate. In Utah, there are more deaths from unintended prescription opioid overdose than firearms, falls, or motor vehicle crashes. Each month there is an average of 24 deaths from prescription opioid abuse in Utah.<sup>31</sup>

Individuals who have a history of prescription opioid misuse are 19 times more likely to use heroin during their lifetime.<sup>32</sup> Identification of people at risk for substance abuse as well as providing treatment are key to improving the rising prescription opioid misuse problem.

**Strategies to Address the Health Need**

Based on the results of the CHNA, Delta Community Hospital staff identified community partners to address the health need over the next several years through screening, education, and treatment. The planning committee engaged representatives of state and local health departments and multiple community partners to identify potential implementation strategies. These strategies will be evaluated and health improvement impact will be measured over the next several years.

**Potential collaborative partners for the Implementation Strategies**

Multiple community agencies have been identified as potential collaborative partners to work with Delta Community Hospital on the community health improvement activities include but are not limited to:

- Central Utah Counseling
- Central Utah Public Health Department
- Delta Elementary School
- Millard School District

**Impact Evaluation of Previous Implementation Strategy**

**2015 Community Benefit Implementation Plan Impact Summary**

**Identified Need**

Improve the prevention, detection, treatment and/or management of chronic diseases associated with weight and unhealthy behaviors.

**Intervention**

Improve the prevention of chronic diseases associated with weight and unhealthy behaviors in children living in the Delta community by implementing:

- The STEP Express eight-week program in Delta Elementary School. The program encourages fourth grade children to be more active and healthy and includes lessons that cover Utah state core curriculum and assessment. Students track their physical activity in challenges beginning with assessment when the program starts and again after the eight-week series.

**Outcomes for 2015 Activities**

**Measurement:**

1. Implement fitness assessment (pre and post) with a 10 percent improvement in all five events of the fitness test
2. Demonstrate reach by reporting number of participants
3. Work with schools to record scores

**Outcomes:**

1. Pre and post fitness assessment demonstrated participants exceeded 10 percent improvement in all five events of the fitness test
2. There were a total of 125 participants
3. Scores were reported
Conclusion

Delta Community Hospital staff is grateful for the support of community members and agencies for their participation in the process of understanding local community health needs and developing strategies to improve health. Delta Community Hospital will conduct its next CHNA in 2019 and looks forward to continuing collaborations to improve the health of our community.

The Delta Community Hospital CHNA was completed by Intermountain Community Benefit and Strategic Planning and Research Departments.

Acknowledgement

This assessment would not be possible without the Utah Department of Health Office of Public Health Assessment. Their talented team of data specialists helped Intermountain identify reliable public health measures that best illustrate the health of a community. Their dedication to the quality of the data and its dissemination helped make this assessment a true community collaboration.

Contributors from the Utah Department of Health Office of Public Health Assessment included Rachel Eddington, Navina Forsythe, Kathy Marti, Kim Neerings, Brian Paoli, Wu Xu, and Tong Zheng. Other local and Utah Department of Health department contributors included Laurie Baksh, Mike Friedrichs, Nicole Stone, Sasha Zaharoff (Department of Environmental Quality), Danny Bennion and Cindy Morgan (Salt Lake County Health Department), Jacob Matthews (Weber-Morgan Health Department), Isa Perry (Davis County Health Department), Christopher Smoot (Wasatch County Health Department), and Jim Vanderslice (University of Utah).
