

Treating Your Cold, Flu, and Other Symptoms

(for those 12 years of age and older)

Here are some over-the-counter medicines and other ways to treat your symptoms. Have your medical provider or pharmacist check the boxes for treatments that will work best for you. Do not use if the box is not checked.

If you have	✓	Use (active ingredient)	Such as (brand)	Comments

	<input type="checkbox"/>	Ibuprofen and Phenylephrine	Advil Sinus	
	<input type="checkbox"/>	Cetirizine and Pseudoephedrine	Zyrtec - D	
Other	<input type="checkbox"/>			

When using this checklist, remember to:

- Tell your doctor or pharmacist about all medicines you are taking and if you have other health problems like diabetes or high blood pressure.
- Try to use medicines that take care of only the symptoms you have right now. Some medicines treat many symptoms at once. Taking these when you don't have all of the symptoms can cause side effects.
- Acetaminophen [uh-see-tuh-MIN-uh-fen] is the active ingredient (main medicine) in Tylenol and is used in many other medicines. Too much acetaminophen can harm your liver. Don't take more than one medicine at a time that contains acetaminophen.
- Follow the instructions on the back of ALL medicines carefully.
- When you go to the store, you can find a medicine's active ingredient by looking at the "Drug Facts" panel on the back of medicine box or bottle (example below). If you have a hard time finding the medicine, ask a pharmacist for help.

Look on the back of the medicine; the active ingredient is found here

Drug Facts	
Active ingredient (in each tablet)	Purpose
Chlorpheniramine maleate 2 mg.....	Antihistamine

Other tips or instructions from your healthcare provider:

How long will my symptoms last?

- **Fever:** Up to 5 days
(most often 2 to 3 days)
- **Sore throat:** Up to 9 days
(most often 5 to 6 days)
- **Cough:** Up to two weeks
(most often 7 to 14 days)
- **Runny nose:** Up to two weeks
(most often 5 to 7 days)

If your symptoms last longer than this, call your healthcare provider for an appointment.

Call your doctor right away if you have:

- New severe pain
- Persistent or rising temperature
- Chest pain
- Coughing up blood (more than a streak)
- Difficulty breathing
- Confusion or severe drowsiness
- Shaking/ chills
